

(12) United States Patent

McGhie et al.

(54) USER INTERFACE FOR THE EXCHANGE OF NON-NEGOTIABLE CREDITS FOR ENTITY INDEPENDENT FUNDS

(76) Inventors: Sean I. McGhie, Boca Raton, FL (US); Brian K. Buchheit, Davie, FL (US)

(*) Notice: Subject to any disclaimer, the term of this patent is extended or adjusted under 35

U.S.C. 154(b) by 0 days.

This patent is subject to a terminal dis-

claimer.

(57)**ABSTRACT**

In one embodiment, a graphical user interface includes a conversion option to convert at least a subset of non-negotiable credits earned from one into entity independent funds in accordance with a conversion ratio. The entity independent funds are accepted by a commerce partner as at least partial payment for goods or services provided by the commerce partner. In absence of converting the non-negotiable credits into entity independent funds, the commerce partner does not accept the non-negotiable credits as payment for goods or services. Responsive to a received selection of the conversion option, the computer presents within the graphical user interface a quantity of available entity independent funds for use as payment for the goods or services provided by the commerce partner. The quantity of available entity independent funds results from converting the subset of non-negotiable credits into the quantity of available entity independent funds in accordance with the conversion ratio.

USER INTERFACE FOR THE EXCHANGE OF NON-NEGOTIABLE CREDITS FOR ENTITY INDEPENDENT FUNDS

CROSS-REFERENCE TO RELATED APPLICATIONS

This continuation application claims the benefit of U.S. patent application Ser. No. 11/420,255 filed 25 May 2006 entitled "Web Based Conversion of Non-Negotiable Credits ¹⁰ Associated with an Entity to Entity Independent Negotiable Funds." The entire contents of U.S. application Ser. No. 11/420,255 are incorporated by reference herein.

BACKGROUND

The present disclosure relates to the field of graphical user interfaces for exchanging non-negotiable credits for entity independent funds.

Entities often reward consumers for utilizing their services with non-negotiable credits, such as frequent flier miles, consumer loyalty points, and entertainment credits. These non-negotiable credits can be applied towards products and/or services provided by a granting entity or its affiliates. For example, consumers can apply frequent flyer credits towards 25 the purchase of airline tickets or airline upgrades. In another example, a consumer can utilize purchase points from a credit card company to receive percentage discounts on goods provided by affiliates. In still another example, entertainment credits can be redeemed for prizes offered in a winnings 30 storefront of an entertainment site.

Many problems are inherent to the current techniques for the redemption of entity provided credits. One such problem is the restriction on usage to goods and/or services of the entity. That is, a consumer may have no need for the products or services listed by the entity for which the non-negotiable credits can be redeemed. Further, additional restrictions and limitations can be placed upon the non-negotiable credits that lessen the usefulness of non-negotiable credits from the consumer's perspective. For instance, airlines often limit the 40 choice of travel dates, known as black-out dates, to which frequent flyer credits can be applied.

Another problem encountered by consumers when redeeming non-negotiable credits is time. Once a consumer submits a request to redeem their non-negotiable credits, the 45 consumer must wait for the entity to perform one or more actions required to fulfill their request. These steps often require days or weeks to complete. For instance, consumers participating in online entertainment sites often are required to wait a minimum of three days for their entertainment 50 credits to be redeemed. Redemption delay can be particularly aggravating to e-commerce consumers, who by nature of an e-commerce marketplace expect rapid responses and immediate consumer gratification.

Time can also be a factor for redeeming credits having an 55 associated expiration date. A consumer's non-negotiable credits may expire before a sufficient quantity is acquired for a desired purchase. Lesser purchases requiring fewer credits may not have a significant appeal for the consumer. Hence, credit expiration dates can further decrease the consumer 60 value of non-negotiable credits.

Yet another problem with conventional implementation of non-negotiable credits is that consumers often belong to multiple credit-earning programs that provide the consumers with multiple incompatible forms of non-negotiable credit. 65 Each of these multiple programs can span a single industry or can span multiple industries. For example, a consumer can

2

acquire a moderate number of frequent flyer miles with multiple airlines, where each airline specific account contains insufficient credits to have any meaningful consumer value. Consumers can also have many different types of non-negotiable credits, such as multiple merchant specific credit, credit card credits, and frequent flier miles, each having different redemption values and program redemption rules. These different programs, values, and rules can understandably confuse and frustrate consumers, who due to their confusion, often elect to avoid participating in an entity sponsored credit program.

BRIEF DESCRIPTION OF THE SEVERAL VIEWS OF THE DRAWINGS

FIG. 1 is a schematic diagram of a Web based conversion of non-negotiable credits associated with an entity to entity independent funds system in accordance with an embodiment of the inventive arrangements disclosed herein.

FIG. 2 is a schematic diagram of successive GUIs that illustrate the Web based conversion of non-negotiable credits associated with an entity to entity independent funds system in accordance with an embodiment of the inventive arrangements disclosed herein.

FIG. 3 is a flow chart of a method for the Web based conversion of non-negotiable credits associated with an entity to entity independent funds system in accordance with an embodiment of the inventive arrangements disclosed herein.

DETAILED DESCRIPTION

The present disclosure permits consumers to transform non-negotiable credits provided by an entity to negotiable funds in an approximately immediate fashion using the Web. More specifically, a conversion agency can function as an intermediary that converts entity provided credits into entity independent funds. The conversion agency can be an independent entity that is not directly affiliated with the credit providing entities.

The conversion can occur automatically using a Web initiated action and can have approximately immediate results. Approximately immediate as used herein can signify that a transaction can occur within a single Web session with user acceptable delay tolerances, typically under half an hour and often under a few minutes. In one embodiment, credits can be automatically converted to funds as part of an e-commerce checkout. In another embodiment, credits can be converted into a user accessible account held with a financial institution.

The present disclosure can be implemented in accordance with numerous aspects consistent with material presented herein. For example, one aspect of the present disclosure can include a method for converting credits to funds. The method can include a step of a Web site receiving user identification information. Non-negotiable credits can be identified that are associated with an entity with which the user has previously interacted. The previous interactions could have earned the non-negotiable credits. Responsive to a user request, a conversion agency can convert a quantity of the non-negotiable credits into a quantity of negotiable funds. The conversion agency can be an agency not directly associated with the entity. The user can be permitted to access the quantity of negotiable funds. The quantity of negotiable funds can be applied to user specified purchases. At least a portion of the purchases can involve at least one vender that does not honor the non-negotiable credits.

Another aspect of the present disclosure can include a software method for converting non-negotiable credits into

negotiable funds. The method can receive a user request to convert a quantity of non-negotiable credits held in a user account associated with an entity. A conversion rate between the non-negotiable credits available to the user and a form of negotiable funds can be automatically determined. A quantity of non-negotiable credits can be automatically subtracted from the user account. A quantity of the negotiable funds based upon the determined conversion rate and quantity of subtracted funds can be automatically transferred to a financial account. The financial account can be an account that is not associated with the entity. The entire method can occur in an approximately immediate fashion.

Still another aspect of the present disclosure can include a Web-based credit to fund conversion system. The system can include a non-negotiable credit account, a negotiable funds 15 account, and a conversion agency. The non-negotiable credit account can be associated with an entity. Non-negotiable credits contained within the non-negotiable credit account can be earned though previous interactions between a user and the entity. The negotiable funds account can include 20 negotiable funds that the user is able to apply to user specified e-commerce purchases. One or more venders involved in the e-commerce purchases can be venders that do not honor the non-negotiable credits for the e-commerce purchases. The conversion agency can automatically and approximately 25 immediately convert a quantity of credits from the non-negotiable credit account to a quantity of funds in the negotiable funds account responsive to a request from the user.

It should be noted that various aspects of the disclosure can be implemented as a program for controlling computing 30 equipment to implement the functions described herein, or a program for enabling computing equipment to perform processes corresponding to the steps disclosed herein. This program may be provided by storing the program in a magnetic disk, an optical disk, a semiconductor memory, or any other 35 recording medium. The program can also be provided as a digitally encoded signal conveyed via a carrier wave. The described program can be a single program or can be implemented as multiple subprograms, each of which interact within a single computing device or interact in a distributed 40 fashion across a network space.

It should also be noted that the methods detailed herein can also be methods performed at least in part by a service agent and/or a machine manipulated by a service agent in response to a service request.

FIG. 1 is a schematic diagram of a Web based conversion of non-negotiable credits associated with an entity to entity independent funds system 100 in accordance with an embodiment of the inventive arrangements disclosed herein. System 100 includes consumer 105 and conversion agency server 50 130.

Consumer 105 interacts with conversion agency server 130 via client 110. Client 110 can be any of a variety of interfaces including, but not limited to, another human being, a personal computer, a kiosk, a graphical user interface (GUI), a Web 55 page, a telephone, a personal data assistant (PDA), a mobile phone, and the like.

Client 110 can operate in a stand-alone fashion. Alternatively, client 110 can be a device that cooperatively participates in a network of distributed computing devices. Client 60 110 can also be another human being utilizing an alternate form of Client 110 to access conversion agency server 130 via network 115. Network 115 can facilitate data exchanges over wireless as well as line-based communication pathways and protocols.

Both consumer 105 and conversion agency server 130 can interact with associate server 150, e-commerce server 120,

4

and financial institution server 140 via network 115. Conversion agency server 130 includes user account data store 135 in which consumer 105 is a member. Associate server 150 includes customer data store 155 in which consumer 105 is a member. Financial institution server 140 includes account data store 142. Account data store 142 includes conversion agency account 144 corresponding to conversion agency 130.

Consumer 105 earns non-negotiable credits from associate server 150. The quantity of these non-negotiable credits is saved in customer data store 155. The method in which consumer 105 earns credits can be any of a variety of activities including, but not limited to, making online purchases, making in-store purchases, playing online games, participating in online games of chance, participating in surveys, and the like. Consumer 105 uses conversion agency server 130 to convert the non-negotiable credits from associate server 150 into negotiable funds provided by e-commerce server 120 or financial institution 140. In one embodiment, conversion agency 130 can include multiple reward accounts of consumer 105.

For example, consumer 105 earns five hundred credits from participating in an online game of chance hosted by associate server 150. Consumer 105 can choose to use conversion agency 130 to convert any or all of these credits to a monetary equivalent. Conversion agency 130 withdraws the necessary amount from conversion agency account 144 contained within the account data store 142 of financial institution 140 and transfers it to an account specified by consumer 105. In another example, consumer 105 uses conversion agency 130 to complete a purchase at e-commerce server 120. Again, conversion agency 130 withdraws the necessary amount from conversion agency account 144 contained within the account data store 142 of financial institution 140 and transfers it to the account of e-commerce server 120.

E-commerce server 120 can be any Web site that supports online purchases of goods or services. In one embodiment, e-commerce server 120 can include a distinct payment option for conversion agency 130. This distinct payment option could process the conversion of credits through their Web site. Alternatively, the distinct payment option could launch an application to process the conversion of credit that is separate from their Web site. In another embodiment, associate server 150 can act as e-commerce server 120.

Financial institution server 140 can be any of a variety of
45 entities including, but not limited to, a bank, a credit card
company, an investment firm, and the like. In one embodiment, financial institution server 140 can reside in the same
country as consumer 105 and/or associate server 150. In
another embodiment, financial institution server 140 can
50 reside in a country other than that of consumer 105 and/or
associate server 150.

FIG. 2 is a schematic diagram of successive GUIs that illustrate the Web based conversion of non-negotiable credits associated with an entity to entity independent funds system 200 in accordance with an embodiment of the inventive arrangements disclosed herein.

GUI 210 can be a checkout window from any e-commerce site. GUI 210 includes payment button 215. Payment button 215 can represent a payment option that includes the conversion of non-negotiable credits to purchase the items in the shopping cart. Selection of payment button 215 by a user can produce GUI 220.

GUI 220 can be a display window from a conversion agency. GUI 220 includes display box 222 and button 225. GUI 220 can be rendered by any of a variety of means including, but not limited to, a Web browser, a JAVA applet, a PERL script, and the like. In one embodiment, GUI 220 can be

contained within the e-commerce site. GUI **220** can display the balance of non-negotiable credits from one or more reward programs. GUI **220** contains a means by which the user selects the type of non-negotiable credits to convert including, but not limited to, a set of radio buttons, a set of checkboxes, a highlighting mechanism, and the like. Display box **222** can display the monetary value of the selected non-negotiable credits. The value displayed in display box **222** can be based on preset conversion factors. Button **225** can represent the initiation of the process by which the selected non-negotiable credits are converted to negotiable funds. Selection of button **225** by a user can produce GUI **230**.

GUI 230 can be a display window from a conversion agency. GUI 230 includes yes button 232 and cancel button 233. GUI 230 can be rendered by any of a variety of means including, but not limited to, a Web browser, a JAVA applet, a PERL script, and the like. In one embodiment, GUI 230 can be contained within the e-commerce site. GUI 230 can display a summary message of the transaction initiated by GUI 220. GUI 230 can include a means to continue the transaction, yes button 232, and a means to cancel the transaction, cancel button 233. Selection of cancel button 233 by a user cancels the transaction and can return the user to GUI 220. Selection of yes button 232 by a user completes the transaction initiated 25 in GUI 220 and can produce GUI 240.

GUI **240** can be a display window from the same said e-commerce site. GUI **240** can contain a message acknowledging the successful conversion of the user's non-negotiable credits into negotiable funds for the purchase of the items in 30 the shopping cart.

FIG. 3 is a flow chart of a method 300 for the Web based conversion of non-negotiable credits associated with an entity to entity independent funds system in accordance with an embodiment of the inventive arrangements disclosed herein. 35

Method 300 can begin in step 305, where a consumer logs onto a rewards Web site. In step 310, the rewards Web site utilizes the user information provided in step 305 to access the consumer's account information and display the amount of non-negotiable credits in the consumer's account. The con-40 sumer elects to redeem some quantity of non-negotiable credits in step 315. If supported by the rewards Web site, step 320 can occur in which the consumer can select the form of negotiable funds to convert the non-negotiable credits. In step 325, a ratio is determined for the conversion of the non- 45 negotiable credits to the selected type of negotiable funds. This ratio can be determined by any of a variety of means including, but not limited to, an algorithm internal to the rewards Web site, an algorithm contained in a system that is remote and/or independent of the rewards Web site, and the 50 like. An electronic commerce transaction is initiated in step 330 to establish the converted amount of negotiable funds in a user account. The quantity of converted non-negotiable credits is subtracted from the user's account in step 335. In step 340, the rewards Web site presents the consumer with an 55 access means for the negotiable funds. Lastly, the consumer terminates the session by logging off the rewards Web site in step 345.

The present disclosure may be realized in hardware, software, or a combination of hardware and software. The present 60 disclosure may be realized in a centralized fashion in one computer system or in a distributed fashion where different elements are spread across several interconnected computer systems. Any kind of computer system or other apparatus adapted for carrying out the methods described herein is 65 suited. A typical combination of hardware and software may be a general purpose computer system with a computer pro-

6

gram that, when being loaded and executed, controls the computer system such that it carries out the methods described herein.

The present disclosure also may be embedded in a computer program product, which comprises all the features enabling the implementation of the methods described herein, and which when loaded in a computer system is able to carry out these methods. Computer program in the present context means any expression, in any language, code or notation, of a set of instructions intended to cause a system having an information processing capability to perform a particular function either directly or after either or both of the following: a) conversion to another language, code or notation; b) reproduction in a different material form.

This disclosure may be embodied in other forms without departing from the spirit or essential attributes thereof. Accordingly, reference should be made to the following claims, rather than to the foregoing specification, as indicating the scope of the disclosure.

What is claimed is:

1. A method comprising:

a computer presenting a graphical user interface (GUI) on a display, said graphical user interface showing a quantity of non-negotiable credits earned through previous interactions with an entity, the graphical user interface comprising a conversion option to convert at least a subset of the shown non-negotiable credits into entity independent funds in accordance with a conversion ratio, wherein the entity independent funds are accepted by a commerce partner as at least partial payment for goods or services provided by the commerce partner, wherein the commerce partner is not said entity, wherein in absence of converting the non-negotiable credits into entity independent funds the commerce partner does not accept the non-negotiable credits as payment for goods or services provided by the commerce partner;

the computer receiving a selection of the conversion option; and

responsive to the received selection being processed, the computer presenting within the graphical user interface a quantity of available entity independent funds for use as payment for the goods or services provided by the commerce partner, said quantity of available entity independent funds resulting from converting the subset of non-negotiable credits into the quantity of available entity independent funds in accordance with the conversion ratio.

2. The method of claim 1, further comprising:

responsive to the received selection being processed, the computer presenting within the graphical user interface a second quantity of non-negotiable credits, wherein said second quantity represents an amount of non-negotiable credits available after converting the subset of non-negotiable credits into the quantity of available entity independent funds.

3. The method of claim 1, further comprising:

the computer presenting a confirmation selector within the graphical user interface responsive to receiving the selection of the conversion operation; and

responsive to receiving a selection via the confirmation selector that indicates the subset of non-negotiable credits are to be converted into the entity-independent funds, proceeding to convert the subset of non-negotiable credits to the quantity of entity independent funds, wherein if the selection is not received that indicates the subset of non-negotiable credits are to be converted into the entity

independent funds, the converting of the subset of non-negotiable credits to negotiable funds does not occur.

- **4**. The method of claim **1**, wherein the graphical user interface is an e-commerce interface through which goods or services provided by the commerce partner are able to be 5 purchased.
 - 5. The method of claim 1, further comprising:
 - the computer presenting the graphical user interface on the display, wherein the graphical user interface provides a number of different options for paying for the goods or 10 services provided by the commerce partner, wherein the different options comprise paying using a credit card, and paying using the non-negotiable credits.
- **6**. The method of claim **1**, wherein the graphical user interface is an interface for an on-line shopping Web site, and 15 wherein the non-negotiable credits are reward points from a credit card company, which is the entity.
- 7. The method of claim 1, wherein the entity independent funds are negotiable funds.
- **8**. The method of claim **1**, wherein the entity independent 20 funds are loyalty points for a loyalty program of the commerce partner.
 - 9. A method comprising:
 - a computer serving a set of one or more Web pages to one or more remotely located client machines, wherein the 25 Web pages are able to be rendered within a client-side browser as a graphical user interface on the one or more client machines, said graphical user interface showing a quantity of non-negotiable credits earned through previous interactions with an entity, the graphical user inter- 30 face comprising a conversion option to convert at least a subset of the shown non-negotiable credits into entity independent funds in accordance with a conversion ratio, wherein the entity independent funds are accepted by a commerce partner as at least partial payment for 35 goods or services provided by the commerce partner, wherein the commerce partner is not said entity, wherein in absence of converting the non-negotiable credits into entity independent funds the commerce partner does not accept the non-negotiable credits as payment for goods 40 or services provided by the commerce partner;

the computer responsive to receiving a message indicating a selection of the conversion option, processing the selection to effectuate changes in the served set of Web pages; and

responsive to the processing, the computer serving one or more Web pages with the effectuated changes causing the graphical user interface to show a quantity of available entity independent funds for use as payment for the goods or services provided by the commerce partner, said quantity of available entity independent funds resulting from converting the subset of non-negotiable credits into the quantity of available entity independent funds in accordance with the conversion ratio.

10. The method of claim 9, further comprising:

the computer responsive to receiving a message indicating a selection of the conversion option, initiating the converting of the subset of non-negotiable credits into the quantity of available entity independent funds.

11. The method of claim 9, further comprising:

responsive to the processing, the computer serving one or more Web pages with the effectuated changes causing the graphical user interface to display a second quantity of non-negotiable credits, wherein said second quantity represents an amount of non-negotiable credits available 65 after converting the subset of non-negotiable credits into the quantity of available entity independent funds.

8

- 12. The method of claim 9, wherein the graphical user interface is an e-commerce interface through which goods or services provided by the commerce partner are able to be purchased.
- 13. The method of claim 9, wherein the graphical user interface provides a number of different options for paying for the goods or services provided by the commerce partner, wherein the different options comprise paying using a credit card, and paying using the non-negotiable credits.
- 14. The method of claim 9, wherein the graphical user interface is an interface for an on-line shopping Web site, and wherein the non-negotiable credits are reward points from a credit card company, which is the entity.
- 15. The method of claim 9, wherein the entity independent funds are negotiable funds.
- 16. The method of claim 9, wherein the entity independent funds are loyalty points for a loyalty program of the commerce partner.
 - 17. Â computer program product comprising:

one or more computer-readable, tangible storage devices; program instructions, stored on at least one of the one or more storage devices, to be executed by one or more processors causing a graphical user interface to be presented upon a visual display device, said graphical user interface showing a quantity of non-negotiable credits earned through previous interactions with an entity, the graphical user interface comprising a conversion option to convert at least a subset of the shown non-negotiable credits into entity independent funds in accordance with a conversion ratio, wherein the entity independent funds are accepted by a commerce partner as at least partial payment for goods or services provided by the commerce partner, wherein the commerce partner is not said entity, wherein in absence of converting the non-negotiable credits into entity independent funds the commerce partner does not accept the non-negotiable credits as payment for goods or services provided by the commerce partner; and

program instructions, stored on at least one of the one or more storage devices, to responsive to a selection of the conversion option being processed cause the graphical user interface to include a quantity of available entity independent funds for use as payment for the goods or services provided by the commerce partner, said quantity of available entity independent funds resulting from converting the subset of non-negotiable credits into the quantity of available entity independent funds in accordance with the conversion ratio.

18. The computer program product of claim **17**, further comprising:

program instructions, stored on at least one of the one or more storage devices, to responsive to the received selection being processed, present within the graphical user interface a second quantity of non-negotiable credits, wherein said second quantity represents an amount of non-negotiable credits available after converting the subset of non-negotiable credits into the quantity of available entity independent funds.

19. The computer program product of claim 17, further 60 comprising:

program instructions, stored on at least one of the one or more storage devices, to present a confirmation selector within the graphical user interface responsive to receiving the selection of the conversion operation; and

program instructions, stored on at least one of the one or more storage devices, to responsive to receiving a selection via the confirmation selector that indicates the sub-

set of non-negotiable credits are to be converted into the entity-independent funds, proceed to convert the subset of non-negotiable credits to the quantity of entity independent funds, wherein if the selection is not received that indicates the subset of non-negotiable credits are to be converted into the entity independent funds, the converting of the subset of non-negotiable credits to negotiable funds does not occur.

- **20.** The computer program product of claim **17**, wherein the graphical user interface is an e-commerce interface 10 through which goods or services provided by the commerce partner are able to be purchased.
- 21. The computer program product of claim 17, further comprising:

program instructions, stored on at least one of the one or 15 more storage devices, to present the graphical user interface on the display, wherein the graphical user interface provides a number of different options for paying for the goods or services provided by the commerce partner, wherein the different options comprise paying using a 20 credit card, and paying using the non-negotiable credits.

- 22. The computer program product of claim 17, wherein the graphical user interface is an interface for an on-line shopping Web site, and wherein the non-negotiable credits are reward points from a credit card company, which is the 25 entity.
- 23. The computer program product of claim 17, wherein the entity independent funds are negotiable funds.
- **24**. The computer program product of claim **17**, wherein the entity independent funds are loyalty points for a loyalty program of the commerce partner.
 - 25. A computing device comprising:

one or more processors and one or more computer-readable, tangible storage devices;

program instructions, stored on at least one of the one or more storage devices for execution by at least one of the one or more processors, to cause a graphical user interface to be presented upon a visual display device, said graphical user interface showing a quantity of non-negotiable credits earned through previous interactions with an entity, the graphical user interface comprising a conversion option to convert at least a subset of the shown non-negotiable credits into entity independent funds in accordance with a conversion ratio, wherein the

10

entity independent funds are accepted by a commerce partner as at least partial payment for goods or services provided by the commerce partner, wherein the commerce partner is not said entity, wherein in absence of converting the non-negotiable credits into entity independent funds the commerce partner does not accept the non-negotiable credits as payment for goods or services provided by the commerce partner; and

program instructions, stored on at least one of the one or more storage devices for execution by at least one of the one or more processors, to responsive to a selection of the conversion option being processed cause the graphical user interface to include a quantity of available entity independent funds for use as payment for the goods or services provided by the commerce partner, said quantity of available entity independent funds resulting from converting the subset of non-negotiable credits into the quantity of available entity independent funds in accordance with the conversion ratio.

- 26. The computing device of claim 25, wherein the graphical user interface is an e-commerce interface through which goods or services provided by the commerce partner are able to be purchased.
- 27. The computing device of claim 25, wherein the graphical user interface is an interface for an on-line shopping Web site, and wherein the non-negotiable credits are reward points from a credit card company, which is the entity.
- 28. The computing device of claim 25, wherein the entity independent funds are negotiable funds.
- 29. The computing device of claim 25, wherein the entity independent funds are loyalty points for a loyalty program of the commerce partner.
 - 30. The computing device of claim 25, further comprising: program instructions, stored on at least one of the one or more storage devices for execution by at least one of the one or more processors, to present the graphical user interface on the display, wherein the graphical user interface provides a number of different options for paying for the goods or services provided by the commerce partner, wherein the different options comprise paying using a credit card, and paying using the non-negotiable credits
