Г

| 1  | (Witness sworn.)                                   |
|----|--|
| 2  | WHEREUPON:   |
| 3  | HUGH DAVID CHARLES SMYTH, Ph.D.,                   |
| 4  | called as a witness herein, having been first duly |
| 5  | sworn, was examined and testified as follows:      |
| 6  | EXAMINATION  |
| 7  | BY MR. CHESLOCK:                                   |
| 8  | Q. Good morning, Dr. Smyth. If you could           |
| 9  | please state your full name for the record.        |
| 10 | A. Hugh David Charles Smyth.                       |
| 11 | Q. Have you been deposed before?                   |
| 12 | A. Yes.  |
| 13 | Q. Okay. How many times have you been              |
| 14 | deposed before?                                    |
| 15 | A. Maybe six, seven, eight, something like         |
| 16 | that.  |
| 17 | Q. And have those depositions all been for         |
| 18 | patent matters?                                    |
| 19 | A. Yes.  |
| 20 | Q. And all those patent matters, were those        |
| 21 | all relating to pharmaceutical formulation         |
| 22 | technologies?                                      |
|    |  |
|    |  |
|    |  |
|    |  |

| 1  | A. Yes.   |
|----|---|
| 2  | Q. So you're familiar with the general ground       |
| 3  | rules of a deposition, right?                       |
| 4  | A. I think so, yes.                                 |
| 5  | Q. So just to reiterate, as you can see, we         |
| 6  | have a court reporter. I'm going to pose questions  |
| 7  | to you, you're going to answer. Your counsel may    |
| 8  | interject an objection to form. So what I'd like    |
| 9  | to ask you to do is make sure that you allow all of |
| 10 | those sequences to happen, give time so those       |
| 11 | questions can be asked, your answers can be given,  |
| 12 | and your counsel's objections may be given.         |
| 13 | Also throughout the day I may ask                   |
| 14 | questions that call for a yes or no answer. So I'd  |
| 15 | like you to enunciate your answer instead of simply |
| 16 | nodding your head so the court reporter can take    |
| 17 | that down.  |
| 18 | A. Yes.   |
| 19 | Q. Is there any reason why you can't provide        |
| 20 | truthful testimony today, no medical conditions or  |
| 21 | any medicines that you're taking that would prevent |
| 22 | that from happening?                                |
|    |   |
|    |   |
|    |   |

| 1  | A. No.  |
|----|---|
| 2  | Q. And you understand you're here today to        |
| 3  | give truthful testimony?                          |
| 4  | A. That's right.                                  |
| 5  | Q. I'm going to provide to you, Dr. Smyth,        |
| 6  | Petitioner's notice of deposition. Have you seen  |
| 7  | this document before?                             |
| 8  | A. I don't think so.                              |
| 9  | Q. Okay. But as I asked you before, you           |
| 10 | understand that you're here in connection with    |
| 11 | certain declarations that you've submitted in the |
| 12 | proceeding here and that you're here to offer     |
| 13 | testimony in connection with those submissions,   |
| 14 | right?  |
| 15 | A. Yes.   |
| 16 | Q. What did you do to prepare for the             |
| 17 | deposition today?                                 |
| 18 | A. I read through my declarations, looked         |
| 19 | through some of the prior art references. That's  |
| 20 | pretty much it.                                   |
| 21 | Q. Did you have any meetings in connection        |
| 22 | with your preparation efforts?                    |
|    |   |
|    |   |
|    |   |
|    |   |

|    |  | Page |
|----|--|------|
| 1  | A. I had a meeting with with the Sterne          |      |
| 2  | Kessler attorneys yesterday.                     |      |
| 3  | Q. Any other meetings besides that meeting       |      |
| 4  | yesterday?                                       |      |
| 5  | A. No.   |      |
| 6  | Q. So earlier you testified that you've given    |      |
| 7  | approximately six depositions in connection with |      |
| 8  | patent matters; is that right?                   |      |
| 9  | A. Yeah. I can't remember the exact number,      |      |
| 10 | but somewhere around there.                      |      |
| 11 | Q. Approximately six is a fair number, right?    |      |
| 12 | A. Sure.   |      |
| 13 | Q. So what is your familiarity with patents      |      |
| 14 | in general?                                      |      |
| 15 | MS. EVERETT: Objection, form.                    |      |
| 16 | BY THE WITNESS:                                  |      |
| 17 | A. I'm an inventor on patents, I've read         |      |
| 18 | patents, and I've been involved in patent        |      |
| 19 | litigation. So some understanding of patents l   |      |
| 20 | guess.   |      |
| 21 | Q. Okay. So you mentioned you've been an         |      |
| 22 | inventor on patents. How many patents on which   |      |
|    |  |      |
|    |  |      |
|    |  |      |
|    | · · · · · · · · · · · · · · · · · · ·            |      |

| 1  | sorry. Let me try that again.                      |
|----|--|
| 2  | You mentioned that you're an inventor              |
| 3  | that's listed on patents. How many patents are you |
| 4  | listed as an inventor on?                          |
| 5  | A. On issued patents probably 12 to 15.            |
| 6  | Q. And have you been responsible for drafting      |
| 7  | any portion of those 12 to 15 patents?             |
| 8  | A. In some cases, you know, we provide the         |
| 9  | law firm, you know, sort of a writeup of           |
| 10 | experimental work and findings and they sort of    |
| 11 | convert that into patent form.                     |
| 12 | Q. And so in connection with the 12 to 15          |
| 13 | patents on which you're listed as an inventor do   |
| 14 | you have an understanding of independent claims?   |
| 15 | A. Yes.  |
| 16 | Q. And do you also have an understanding of        |
| 17 | dependent claims?                                  |
| 18 | A. I think I do.                                   |
| 19 | Q. And would it be fair to say that your           |
| 20 | understanding is that a dependent claim contains   |
| 21 | all the limitations of the claim from which it     |
| 22 | depends?   |
|    |  |
|    |  |
|    |  |
|    |  |

|    | Hugh David Charles Smyth - January 31, 2018<br>Page 11 |
|----|--|
| 1  | A. A dependent claim would be narrower than            |
| 2  | the independent claim.                                 |
| 3  | Q. And the dependent claim would be within             |
| 4  | the scope of the independent claim, correct?           |
| 5  | MS. EVERETT: Objection, form.                          |
| 6  | BY MR. CHESLOCK:                                       |
| 7  | Q. Let me try that differently. And so what            |
| 8  | would be stated in a dependent claim would come        |
| 9  | within the scope of an independent claim?              |
| 10 | MS. EVERETT: Objection, form.                          |
| 11 | BY THE WITNESS:  |
| 12 | A. A dependent claim would have the elements           |
| 13 | of the independent claim in addition to other          |
| 14 | requirements, if that's kind of what you're saying,    |
| 15 | within the scope.                                      |
| 16 | Q. Dr. Smyth, I will now hand to you what has          |
| 17 | previously been marked as Petitioner's                 |
| 18 | Exhibit 1001. Do you recognize Petitioner's            |
| 19 | Exhibit 1001?  |
| 20 | A. I recognize this as the '620 Patent, yes.           |
| 21 | Q. Okay. And you've mentioned that you                 |
| 22 | recognize Exhibit Petitioner's Exhibit 1001 as         |
|    |  |
|    |  |
|    |  |
|    |  |

|    |   | Page 12 |
|----|---|---------|
| 1  | the '620 Patent. So are you comfortable throughout  |         |
| 2  | the deposition today if we refer to it as such?     |         |
| 3  | A. As the '620, yes, that sounds good.              |         |
| 4  | Q. Sounds good.                                     |         |
| 5  | lf you would, please, Dr. Smyth, in the             |         |
| 6  | '620 Patent can you advance to column 11 and let me |         |
| 7  | know when you're there.                             |         |
| 8  | A. Okay. I'm there.                                 |         |
| 9  | Q. So we had a discussion just now about the        |         |
| 10 | understanding you have of independent and dependent |         |
| 11 | claims; do you remember that?                       |         |
| 12 | A. Yes.   |         |
| 13 | Q. So looking in column 11, claim 1, that           |         |
| 14 | would be an independent claim, right?               |         |
| 15 | A. That is right.                                   |         |
| 16 | Q. And claim 2 would be a dependent claim,          |         |
| 17 | right?  |         |
| 18 | A. Claim 2 is dependent on claim 1.                 |         |
| 19 | Q. Right. And your understanding is that a          |         |
| 20 | dependent claim contains all the limitations of the |         |
| 21 | claim from which it depends. In this case claim 2   |         |
| 22 | contains all the limitations of claim 1?            |         |
|    |   |         |
|    |   |         |
|    |   |         |
|    |   |         |

Claim 2 contains all the limitations of

1

Α.

| 1  | deposition reviewed your declarations, plural,     |
|----|--|
| 2  | right?   |
| 3  | A. Yes.  |
| 4  | Q. So there's a first Dr. Smyth declaration        |
| 5  | and there's a second Dr. Smyth declaration in this |
| 6  | proceeding, right?                                 |
| 7  | A. That's my understanding, yes.                   |
| 8  | Q. So for purposes of clarity today, are you       |
| 9  | comfortable if I refer to Patent Owner's           |
| 10 | Exhibit 2150 as your declaration?                  |
| 11 | A. Sure. I'll try and keep that in mind.           |
| 12 | Q. Would it be simpler if I refer to it as         |
| 13 | the second declaration?                            |
| 14 | A. That would be good.                             |
| 15 | Q. That would be better?                           |
| 16 | A. Yeah.   |
| 17 | Q. Okay.   |
| 18 | If you could please look again at the              |
| 19 | '620 Patent and in particular claim 1. You would   |
| 20 | agree with me that claim 1 generally claims a      |
| 21 | combination of azelastine and fluticasone, right?  |
| 22 | MS. EVERETT: Objection to form.                    |
|    |  |
|    |  |
|    |  |
| _  |  |

| 1  | BY THE WITNESS:                                     |
|----|---|
| 2  | A. It claims azelastine, its pharmaceutically       |
| 3  | acceptable salt fluticasone, a pharmaceutically     |
| 4  | acceptable ester of that, where in the              |
| 5  | formulation pharmaceutical formulation suitable     |
| 6  | for nasal administration.                           |
| 7  | Q. Okay. So just generally, I'm just asking         |
| 8  | generally, would you understand claim 1 in addition |
| 9  | to its particular claim language to be a            |
| 10 | combination of azelastine and fluticasone?          |
| 11 | A. It has those two elements in it, yes, in         |
| 12 | addition to others.                                 |
| 13 | Q. Okay. Let's look, please, at column 13 of        |
| 14 | the '620 Patent, please. You see claim 24 there?    |
| 15 | That's an independent claim at issue in this        |
| 16 | proceeding, right?                                  |
| 17 | A. Yes, that looks like an independent claim.       |
| 18 | Q. And similar to claim 1, appreciating the         |
| 19 | claim language itself, it's also generally a        |
| 20 | combination of azelastine and fluticasone, right?   |
| 21 | A. It contains an element of azelastine             |
| 22 | hydrochloride and fluticasone proprionate in        |
|    |   |
|    |   |
|    |   |

| <ul> <li>addition to other language.</li> <li>Q. And here in claim 24 the azelastine is</li> <li>claimed as an azelastine hydrochloride, correct?</li> <li>A. Yes.</li> <li>Q. So azelastine in the context of</li> <li>independent claims 24 and 1 is a hydrochloride</li> <li>salt, correct?</li> <li>A. For azelastine it's a hydrochloride form</li> <li>of that drug, yes.</li> <li>Q. For purposes of both independent claim 24</li> <li>and independent claim 1, right?</li> <li>A. So claim 1 does not specify whether it's a</li> <li>hydrochloride salt.</li> <li>Q. But claim 1 does specify that it's a</li> <li>pharmaceutically acceptable salt?</li> </ul> |
|---|
| <ul> <li>claimed as an azelastine hydrochloride, correct?</li> <li>A. Yes.</li> <li>Q. So azelastine in the context of</li> <li>independent claims 24 and 1 is a hydrochloride</li> <li>salt, correct?</li> <li>A. For azelastine it's a hydrochloride form</li> <li>of that drug, yes.</li> <li>Q. For purposes of both independent claim 24</li> <li>and independent claim 1, right?</li> <li>A. So claim 1 does not specify whether it's a</li> <li>hydrochloride salt.</li> <li>Q. But claim 1 does specify that it's a</li> </ul>   |
| <ul> <li>9 of that drug, yes.</li> <li>10 Q. For purposes of both independent claim 24</li> <li>11 and independent claim 1, right?</li> <li>12 A. So claim 1 does not specify whether it's a</li> <li>13 hydrochloride salt.</li> <li>14 Q. But claim 1 does specify that it's a</li> </ul>   |
| <ol> <li>Q. For purposes of both independent claim 24</li> <li>and independent claim 1, right?</li> <li>A. So claim 1 does not specify whether it's a</li> <li>hydrochloride salt.</li> <li>Q. But claim 1 does specify that it's a</li> </ol>  |
| <ul> <li>and independent claim 1, right?</li> <li>A. So claim 1 does not specify whether it's a</li> <li>hydrochloride salt.</li> <li>Q. But claim 1 does specify that it's a</li> </ul>  |
| <ul> <li>A. So claim 1 does not specify whether it's a</li> <li>hydrochloride salt.</li> <li>Q. But claim 1 does specify that it's a</li> </ul>   |
| <ul> <li>13 hydrochloride salt.</li> <li>14 Q. But claim 1 does specify that it's a</li> </ul>  |
| 14 Q. But claim 1 does specify that it's a  |
|   |
| 15 pharmaceutically acceptable salt?  |
|   |
| 16 A. It does say that, yes.  |
| 17 Q. Of the azelastine, right?   |
| 18 A. Yes.  |
| 19 Q. I'd now like you to look at your second   |
| 20 declaration while you also have the '620 Patent  |
| 21 out, if you could, please, and in particular I'd   |
| 22 like you to look at paragraph 47 that starts on  |
|   |
|   |
|   |
|   |

| 1  | page 29. Here in paragraph 27 you explain that      |
|----|---|
| 2  | azelastine as a hydrochloride salt will             |
| 3  | disassociate into its cationic and anionic portions |
| 4  | when dissolved in an aqueous solution, right?       |
| 5  | A. So in 47 I say that a POSA would have            |
| 6  | understood that azelastine was a cationic drug; in  |
| 7  | a pharmaceutical aqueous solution the tertiary      |
| 8  | amine of azelastine will get a positive charge;     |
| 9  | azelastine salt will disassociate into cationic and |
| 10 | anionic portions when dissolved; a POSA would have  |
| 11 | known that azelastine would have behaved like a     |
| 12 | cationic drug.                                      |
| 13 | Q. So what you're saying here in that portion       |
| 14 | of paragraph 47 that you read starting with "In a   |
| 15 | pharmaceutical aqueous solution" is that azelastine |
| 16 | as a hydrochloride salt will disassociate into its  |
| 17 | cationic and anionic portions when dissolved in an  |
| 18 | aqueous solution, right, when dissolved in water?   |
| 19 | A. In a pharmaceutical aqueous solution.            |
| 20 | Q. And that basically means dissolving into         |
| 21 | water, right?                                       |
| 22 | A. It would be a situation where the pH would       |
|    |   |
|    |   |
|    |   |
|    | GregoryEdwards, LLC   Worldwide Court Reporting     |

| 1  | be, you know, pharmaceutically relevant.            |
|----|---|
| 2  | Q. So as you state here in paragraph 47, a          |
| 3  | portion of which you read, that azelastine as a     |
| 4  | hydrochloride salt will behave as a cationic drug   |
| 5  | and produce electrolytes, right, when dissolved?    |
| 6  | A. Yes, in a pharmaceutical aqueous solution.       |
| 7  | Q. And that's typical of hydrochloride salts,       |
| 8  | right?  |
| 9  | A. It can be.                                       |
| 10 | Q. And when you say "can be," is it typical         |
| 11 | of pharmaceutical hydrochloride salts?              |
| 12 | A. If they're soluble.                              |
| 13 | Q. There are many such hydrochloride salts          |
| 14 | that are used in pharmaceuticals, right?            |
| 15 | A. Can you clarify the question?                    |
| 16 | Q. So hydrochloride salts are used in               |
| 17 | pharmaceutical aqueous solutions in a variety of    |
| 18 | different products, right?                          |
| 19 | A. Yes. So you would have many different            |
| 20 | types of active pharmaceutical ingredients that may |
| 21 | be synthesized as a hydrochloride salt.             |
| 22 | Q. So an example of that would be like              |
|    |   |
|    |   |
|    |   |
|    |   |

| 1  | tetracycline hydrochloride?  |
|----|--|
| 2  | A. I'm not sure about tetracycline, but maybe  |
| 3  | there's a hydrochloride salt.  |
| 4  | Q. And with respect to those hydrochloride   |
| 5  | salts, are pharmaceutical compounds intentionally                                      |
| 6  | designed to be salts so they will dissolve and   |
| 7  | disassociate into water?   |
| 8  | MS. EVERETT: Objection to form.  |
| 9  | BY THE WITNESS:  |
| 10 | A. They're designed for many aspects. Could  |
| 11 | be stability, solubility, bioavailability,   |
| 12 | depending on the physicochemical characteristics of                                    |
| 13 | the drug different salt forms will be synthesized                                      |
| 14 | or made into a free base form. Depends, you know,                                      |
| 15 | essentially on the desired outcome.  |
| 16 | Q. But with respect to at least hydrochloride  |
| 17 | salts that are used in pharmaceuticals, they're  |
| 18 | intentionally designed that way to be salts at   |
| 19 | least in one respect so that they will dissolve and                                    |
| 20 | disassociate into water?   |
| 21 | MS. EVERETT: Objection to form.  |
| 22 | BY THE WITNESS:  |
|    |  |
|    |  |
|    |  |
|    | GregoryEdwards, LLC   Worldwide Court Reporting  |
|    | GregoryEdwards, EEG   Worrdwrdde Godr't Reporting<br>GregoryEdwards.com   866-4Team GE |

| 1  | A. That may be the case for some                   |
|----|--|
| 2  | hydrochloride salts. It could be the case that     |
| 3  | it's not for other hydrochloride salts.            |
| 4  | Q. So there's at least a class of                  |
| 5  | pharmaceutical hydrochloride salts that are        |
| 6  | designed specifically to be salts so they'll       |
| 7  | dissolve and disassociate into water?              |
| 8  | A. That's probably a fair statement. Some          |
| 9  | hydrochloride salts are designed for solubility.   |
| 10 | Q. So for that grouping of hydrochloride           |
| 11 | salts that are designed for solubility as you just |
| 12 | testified the general expectation of a person of   |
| 13 | ordinary skill in the art is that when such a      |
| 14 | hydrochloride salt version of a given              |
| 15 | pharmaceutical compound is dissolved into water it |
| 16 | will disassociate into its cationic and anionic    |
| 17 | portions, right?                                   |
| 18 | MS. EVERETT: Objection, form.                      |
| 19 | BY THE WITNESS:                                    |
| 20 | A. One aspect of solubility is disassociation      |
| 21 | of salts. So if it was designed so that you had a  |
| 22 | salt form that had suitable solubility in an       |
|    |  |
|    |  |
|    |  |
|    |  |

|    |   | Tage |
|----|---|------|
| 1  | aqueous environment, then you would expect it to be |      |
| 2  | disassociating into ionic forms.                    |      |
| 3  | Q. Are you familiar with pseudoephedrine            |      |
| 4  | hydrochloride?                                      |      |
|    |   |      |
| 5  |   |      |
| 6  | hydrochloride.                                      |      |
| 7  | Q. And you're aware that pseudoephedrine is         |      |
| 8  | at times formulated as a hydrochloride salt for     |      |
| 9  | solubility, right?                                  |      |
| 10 | MS. EVERETT: Objection to form.                     |      |
| 11 | BY THE WITNESS:                                     |      |
| 12 | A. I haven't really looked into that, but           |      |
| 13 | that's a potential.                                 |      |
| 14 | Q. So as an expert in pharmaceutical                |      |
| 15 | formulations you're saying that you do not have any |      |
| 16 | knowledge of whether or not pseudoephedrine is      |      |
| 17 | formulated at times as a hydrochloride salt?        |      |
| 18 | A. Yeah. I would need to look that up. I            |      |
| 19 | can't remember if pseudoephedrine is predominantly  |      |
| 20 | a hydrochloride salt. It's not one that l've        |      |
| 21 | studied in my lab.                                  |      |
| 22 | Q. How about tetracycline hydrochloride, are        |      |
|    |   |      |
|    |   |      |
|    |   |      |
|    | GregoryEdwards, LLC   Worldwide Court Reporting     |      |

ſ

| 1  | you familiar with that?                             |
|----|---|
| 2  | A. Same thing. It's not something that I            |
| 3  | have looked into recently or can really remember to |
| 4  | give you accurate testimony on.                     |
| 5  | Q. But you are aware that there are other           |
| 6  | active ingredients sorry. Let me try that           |
| 7  | again.  |
| 8  | As you testified earlier, you're aware              |
| 9  | that there are other drug active ingredients that   |
| 10 | are formulated as hydrochloride salts for           |
| 11 | solubility, right?                                  |
| 12 | A. Yes. There will be a number of active            |
| 13 | pharmaceutical ingredients with hydrochloride       |
| 14 | salts.  |
| 15 | Q. Can you give me an example besides               |
| 16 | azelastine hydrochloride?                           |
| 17 | MS. EVERETT: Objection, form.                       |
| 18 | BY THE WITNESS:                                     |
| 19 | A. I think one is cyprofloxacin                     |
| 20 | hydrochloride.                                      |
| 21 | Q. So cyprofloxacis hydrochloride?                  |
| 22 | A. cyprofloxacin.                                   |
|    |   |
|    |   |
|    |   |
|    |   |

|    | Hugh David Charles Smyth - January 31, 2018         | <b>D</b> |
|----|---|----------|
|    |   | Page 23  |
| 1  | Q. Oh, cyprofloxacin hydrochloride?                 |          |
| 2  | A. Yes.   |          |
| 3  | Q. And similar to azelastine hydrochloride,         |          |
| 4  | you would expect cyprofloxacin hydrochloride to     |          |
| 5  | disassociate into its cationic and anionic portions |          |
| 6  | when dissolved in water right?                      |          |
| 7  | MS. EVERETT: Objection to form.                     |          |
| 8  | BY THE WITNESS:                                     |          |
| 9  | A. Cyprofloxacin does have aqueous solubility       |          |
| 10 | and disassociate into different ionic forms.        |          |
| 11 | Q. And will likewise produce electrolytes           |          |
| 12 | when dissolved?                                     |          |
| 13 | A. It will produce an electrolyte                   |          |
| 14 | concentration in a solution when dissolved, yes.    |          |
| 15 | Q. And with respect to that dissolving              |          |
| 16 | process, hydrochloride salts lead to what would be  |          |
| 17 | referred to as monovalent anions and cations,       |          |
| 18 | correct?  |          |
| 19 | A. It can't be monovalent. It may be                |          |
| 20 | bivalent, trivalent. I actually don't know the      |          |
| 21 | valency of those cations.                           |          |
| 22 | Q. What about with respect to azelastine            |          |
|    |   |          |
|    |   |          |
|    |   |          |

| 1  | hydrochloride specifically, are you aware that when |
|----|---|
| 2  | it's dissolved in water that it gives a monovalent  |
| 3  | cation?   |
| 4  | A. I haven't studied the valency of                 |
| 5  | azelastine, but it could be monovalent, bivalent,   |
| 6  | maybe even trivalent.                               |
| 7  | Q. Dr. Smyth, I'll now hand you what was            |
| 8  | previously designated Patent Owner's                |
| 9  | Exhibit 2113. I will also hand to you what was      |
| 10 | previously labeled Patent Owner's Exhibit 2104.     |
| 11 | So focusing first on Patent Owner's                 |
| 12 | Exhibit 2113, what is that exhibit?                 |
| 13 | A. The front page indicates that it's the           |
| 14 | Lieberman textbook "Pharmaceutical Dosage Forms:    |
| 15 | Disperse Systems, Volume 2," and it is chapter 5,   |
| 16 | "Topical Suspensions."                              |
| 17 | Q. And this Exhibit 2113 is a document that         |
| 18 | you rely upon in your second declaration and        |
| 19 | references; is that right?                          |
| 20 | A. I think it is, yes.                              |
| 21 | Q. The exhibit copy that I gave you, that's a       |
| 22 | full copy of what Patent Owner's have submitted in  |
|    |   |
|    |   |
|    |   |
|    |   |
|    |   |

| 1  | this proceeding?                                    |
|----|---|
| 2  | A. I presume so.                                    |
| 3  | Q. Do you have any reason to doubt that's not       |
| 4  | the case?   |
| 5  | A. No, I don't suppose I do, but you never          |
| 6  | know.   |
| 7  | Q. Let's look at Patent Owner's Exhibit 2104,       |
| 8  | which is the other one I gave you. Do you           |
| 9  | recognize that exhibit?                             |
| 10 | A. Yes. This is the same textbook by                |
| 11 | Lieberman as the other exhibit, and this is chapter |
| 12 | 4, "Oral Aqueous Suspensions."                      |
| 13 | Q. And similar to the other exhibit, you            |
| 14 | don't have any reason to believe that this isn't a  |
| 15 | complete copy of the exhibit that was submitted by  |
| 16 | Patent Owner?                                       |
| 17 | A. Sure.  |
| 18 | Q. And similar to Patent Owner's                    |
| 19 | Exhibit 2113, you rely on Patent Owner's            |
| 20 | Exhibit 2104 and reference it in your second        |
| 21 | declaration?  |
| 22 | A. Yeah, I think I do.                              |
|    |   |
|    |   |
|    |   |
|    |   |

| 1 Q. And your testimony was that Patent Owner's      |  |
|--|--|
| 2 Exhibit 2104 is chapter 4 of a reference edited by |  |
| 3 or authored by Lieberman and Exhibit 2113 is       |  |
| 4 chapter 5 of the same reference; isn't that right? |  |
| 5 MS. EVERETT: Objection, form.                      |  |
| 6 BY THE WITNESS:                                    |  |
| 7 A. I think these are two chapters out of the       |  |
| 8 same textbook, yes.                                |  |
| 9 Q. So similar to some of the other wording         |  |
| 10 issues that we discussed before, are you          |  |
| 11 comfortable if we refer to, as a whole, these two |  |
| 12 together as the Lieberman reference?              |  |
| 13 A. That's fair.                                   |  |
| 14 Q. And I'll direct you to any particular          |  |
| 15 pages in each of the two respective exhibits.     |  |
| 16 0kay?   |  |
| 17 A. Sure.  |  |
| 18 Q. So just now I asked you whether or not         |  |
| 19 azelastine as a hydrochloride salt when dissolved |  |
| 20 into water gives a monovalent cation and you said |  |
| 21 you don't know?                                   |  |
| 22 A. I would suspect that it would have some        |  |
|  |  |
|  |  |
|  |  |
| Cueren Edwards IIC Wandwide Count Departing          |  |

| 1  | monovalence, maybe some bivalence, some trivalence. |   |
|----|---|---|
| 2  | Q. I believe what you testified to was "I           |   |
| 3  | haven't studied the valency of azelastine, but it   |   |
| 4  | could be monovalent or it could be trivalent" isn't |   |
| 5  | that right? So you haven't studied it, correct?     |   |
| 6  | A. I have looked at the structure of                |   |
| 7  | azelastine. I haven't experimentally determined     |   |
| 8  | its valency.  |   |
| 9  | Q. So it's fair to say you don't know the           |   |
| 10 | answer to that question?                            |   |
| 11 | A. I can't speculate on that.                       |   |
| 12 | Q. So any information you would have with           |   |
| 13 | respect to whether or not azelastine as             |   |
| 14 | a hydrochloride so it would be fair to say that     |   |
| 15 | any information you have sitting here in your       |   |
| 16 | deposition today and also in connection with when   |   |
| 17 | you prepared your second declaration about whether  |   |
| 18 | or not azelastine as a hydrochloride salt would     |   |
| 19 | give a monovalent anion when dissolved in water is  |   |
| 20 | based on speculation?                               |   |
| 21 | MS. EVERETT: Objection to form.                     |   |
| 22 | BY THE WITNESS:                                     |   |
|    |   |   |
|    |   |   |
|    |   |   |
|    | GragoryEdwards LLC Warldwide Court Paparting        | _ |

| -  |   | ra, |
|----|---|-----|
| 1  | A. It would be my expert opinion based on the       |     |
| 2  | chemical structure that azelastine has several      |     |
| 3  | tertiary amines, which I talk about in my report,   |     |
| 4  | which would give rise to the cationic nature of the |     |
| 5  | drug molecule in solution.                          |     |
| 6  | Q. But based on the fact that you haven't           |     |
| 7  | studied, as you previously testified, with respect  |     |
| 8  | to the valency of cations that azelastine           |     |
| 9  | hydrochloride would give during dissolving in       |     |
| 10 | water, that would be based on speculation, right?   |     |
| 11 | MS. EVERETT: Objection to form.                     |     |
| 12 | BY THE WITNESS:                                     |     |
| 13 | A. No. It would be based on my understanding        |     |
| 14 | of disassociation and protonation of amines in      |     |
| 15 | solution.   |     |
| 16 | Q. But even based on that general                   |     |
| 17 | understanding, you don't know for sure what type of |     |
| 18 | cations azelastine hydrochloride gives when         |     |
| 19 | dissolved in water, right?                          |     |
| 20 | MS. EVERETT: Objection to form.                     |     |
| 21 | BY THE WITNESS:                                     |     |
| 22 | A. To definitively know what valency of the         |     |
|    |   |     |
|    |   |     |
|    |   |     |
| L  | GregoryEdwards, LLC   Worldwide Court Reporting     |     |

| 1  | cations or distribution of the valency one would    |
|----|---|
| 2  | need to actually experimentally do a titration to   |
| 3  | determine that.                                     |
| 4  | Q. And you've never done that?                      |
| 5  | A. I have not done a titration on azelastine        |
| 6  | hydrochloride in solution.                          |
| 7  | Q. If you could take the 2113 exhibit from          |
| 8  | the Lieberman reference and go to page Bates-       |
| 9  | labeled page at the bottom 24.                      |
| 10 | A. 24.  |
| 11 | Q. And just in general before we get into the       |
| 12 | reference and your declaration, microcrystalline    |
| 13 | cellulose is commonly referred to as MCC, right?    |
| 14 | A. Yes.   |
| 15 | Q. And similar to some of the other areas           |
| 16 | that we've been through today, would you be         |
| 17 | comfortable referring to microcrystalline cellulose |
| 18 | as MCC during the deposition?                       |
| 19 | A. That's fine.                                     |
| 20 | Q. And similarly, sodium carboxymethyl              |
| 21 | cellulose is commonly referred to as CMCC, right?   |
| 22 | A. CMC, yes.  |
|    |   |
|    |   |
|    |   |
|    |   |
|    |   |

|    |  | Page |
|----|--|------|
| 1  | Q. And you're comfortable if we use that term      |      |
| 2  | during the deposition today?                       |      |
| 3  | A. That's fine.                                    |      |
| 4  | Q. And if you could while you have the 2113        |      |
| 5  | Lieberman exhibit in front of you also take out    |      |
| 6  | your declaration and in particular go to paragraph |      |
| 7  | 45. Do you have those in front of you now?         |      |
| 8  | A. Yes.  |      |
| 9  | Q. So it's your understanding that Petitioner      |      |
| 10 | in this proceeding advances that a person of       |      |
| 11 | ordinary skill would have used MCC and CMCC as the |      |
| 12 | thickening agent for an azelastine fluticasone     |      |
| 13 | combination formulation, right?                    |      |
| 14 | A. Can you say that again? Sorry.                  |      |
| 15 | Q. Sure. So it's your understanding, which         |      |
| 16 | is also stated in paragraph 45, that Petitioner in |      |
| 17 | this proceeding is advancing that a person of      |      |
| 18 | ordinary skill would have used MCC and CMC as the  |      |
| 19 | thickening agent for an azelastine fluticasone     |      |
| 20 | combination formulation, right?                    |      |
| 21 | A. So some of that language I'm not clear on.      |      |
| 22 | So the Petitioner, who is that?                    |      |
|    |  |      |
|    |  |      |
|    |  |      |
|    |  |      |

| 1  | Q. That's Argentum Pharmaceuticals.                 |
|----|---|
| 2  | A. Okay. And then "advancing"?                      |
| 3  | Q. Okay. I'll change it a little bit. Just          |
| 4  | to be clear, Petitioner, Argentum, is arguing that  |
| 5  | one of skill in the art would have used MCC and CMC |
| 6  | as the thickening agent for an azelastine           |
| 7  | fluticasone combination, right?                     |
| 8  | A. My opinion was in 45 I think you're              |
| 9  | referring to that where Argentum asserts a POSA     |
| 10 | would have used MCC and CMC as a thickening agent   |
| 11 | for an azelastine fluticasone combination           |
| 12 | formulation.  |
| 13 | Q. And it's your opinion, again, stated there       |
| 14 | in paragraph 45, that certain references in the art |
| 15 | would have discouraged a person of ordinary skill   |
| 16 | from using MCC and CMC with the azelastine portion  |
| 17 | of that combination, right?                         |
| 18 | A. Yes.   |
| 19 | Q. And in order to support that opinion you         |
| 20 | refer to the Lieberman reference, right?            |
| 21 | A. Yes.   |
| 22 | Q. And in particular you refer to a statement       |
|    |   |
|    |   |
|    |   |
| _  |   |

Γ

| 1  | which is more fully reproduced not in your opinion, |
|----|---|
| 2  | but in the Lieberman Exhibit 2133 reference that    |
| 3  | states "Carboxymeth" and this is to direct          |
| 4  | your attention to where I'm reading, firstly, the   |
| 5  | statement from the 2133 2113 Lieberman reference    |
| 6  | is halfway down paragraph 46. Do you see where it   |
| 7  | starts with "Carboxymethyl cellulose solutions"?    |
| 8  | A. Yes.   |
| 9  | Q. Now, if you could look to the Lieberman          |
| 10 | 2113 reference and do you see in the fourth         |
| 11 | paragraph down the same sentence starts with        |
| 12 | "Carboxymethyl cellulose solutions"?                |
| 13 | A. I see that paragraph.                            |
| 14 | Q. And that paragraph is present under a            |
| 15 | subsection A that's entitled "Sodium carboxymethyl  |
| 16 | cellulose," right?                                  |
| 17 | A. That is correct.                                 |
| 18 | Q. And that's the same CMCC that we've been         |
| 19 | talking about, right?                               |
| 20 | A. Yes. CMC.  |
| 21 | Q. CMC. You would agree with me that the            |
| 22 | sentence from Lieberman Exhibit 2113 is not fully   |
|    |   |
|    |   |
|    |   |
|    |   |

| 1  | reproduced in your opinion, paragraph 46, correct?  |
|----|---|
| 2  | A. In 46 I have pulled out the elements that        |
| 3  | "Carboxymethyl cellulose solutions have poor        |
| 4  | tolerance for electrolytes as they precipitate the  |
| 5  | polymer," and "CMC is compatible with other         |
| 6  | nonionic cellulose derivatives, clays, and commonly |
| 7  | into preservatives but is incompatible with         |
| 8  | cationic drugs." It doesn't state this whole        |
| 9  | paragraph 4 from Lieberman.                         |
| 10 | Q. Right. So you would agree with me that           |
| 11 | the portion that's missing is the part that states  |
| 12 | "Especially di- and trivalent cations," correct?    |
| 13 | A. That's not in my report, "Especially             |
| 14 | divalent di- and trivalent cations as they          |
| 15 | precipitate the polymer."                           |
| 16 | Q. And the incompatibility of CMC with              |
| 17 | electrolytes of the type especially di- and         |
| 18 | trivalent cations would be important in terms of    |
| 19 | the understanding of what one of skill in the art   |
| 20 | would take away from this sentence, right?          |
| 21 | MS. EVERETT: Objection to form.                     |
| 22 | BY THE WITNESS:                                     |
|    |   |
|    |   |
|    |   |
|    |   |

| 1 A. So that's electrolytes, but further down          |  |
|--|--|
| 2 in that paragraph it explicitly says "But is         |  |
| 3 incompatible with cationic drugs," which is in my    |  |
| 4 report which is really the key thing here with       |  |
| 5 azelastine.  |  |
| 6 Q. You would agree with me that azelastine is        |  |
| 7 not explicitly stated in Lieberman Exhibit 2113,     |  |
| 8 correct?   |  |
| 9 A. Lieberman does not make mention of any            |  |
| 10 specific drugs or azelastine in that paragraph.     |  |
| 11 Q. And then focusing in again on the first          |  |
| 12 sentence of paragraph 4 under subsection A on page  |  |
| 13 24 of Lieberman 2113, its highlighting of the di-   |  |
| 14 and trivalent electrons would suggest to a person   |  |
| 15 of ordinary skill that the main problems with CMC   |  |
| 16 involve multivalent cations, right?                 |  |
| 17 MS. EVERETT: Objection to form.                     |  |
| 18 BY THE WITNESS:                                     |  |
| 19 A. I don't read it that way. It says                |  |
| 20 especially divalent, trivalent cations, the polymer |  |
| 21 is going to have poor tolerance for them            |  |
| 22 especially, but it also says it's incompatible with |  |
|  |  |
|  |  |
|  |  |
| GregorvEdwards. LLC   Worldwide Court Reporting        |  |

| 1  | cationic drugs.                                     |
|----|---|
| 2  | Q. If you could please take out the other           |
| 3  | Lieberman reference, which is Exhibit 2104, and let |
| 4  | me know when you have it.                           |
| 5  | A. I'm there.                                       |
| 6  | Q. Okay. Can you advance to the Bates label         |
| 7  | at the bottom to page 19.                           |
| 8  | A. Okay.  |
| 9  | Q. And if you look at paragraph 46 of your          |
| 10 | declaration, you would agree with me that you cite  |
| 11 | this page 19 of the Lieberman 2104 reference in the |
| 12 | third-to-last sentence, correct?                    |
| 13 | MS. EVERETT: Objection, form.                       |
| 14 | BY THE WITNESS:                                     |
| 15 | A. In the third-to-last sentence? At the end        |
| 16 | of paragraph 46                                     |
| 17 | Q. The second-to-last sentence.                     |
| 18 | A. Yes.   |
| 19 | Q. This Exhibit 2104, specifically page 19 is       |
| 20 | cited there?  |
| 21 | A. Yes.   |
| 22 | Q. But there's no quotation from Lieberman          |
|    |   |
|    |   |
|    |   |
|    |   |

Г

| 1       there's no quotation in your paragraph 46 in your         2       second declaration to any text from Lieberman         3       Exhibit 2104 at page 19, right?         4       A. Essentially it says the same thing in         5       Lieberman on that page 19 where it says "Because it         6       is anionic it is usually incompatible with cationic         7       drugs," which is essentially what is the same         8       statement in the quote above.         9       0. Well, is it true that the statement we         10       just focused on on page 19 of Exhibit 2104 uses the         11       term "usually," correct?         12       A. It does use that word, yes.         13       0. And the plain language meaning of         14       "usually" means not always, right?         15       MS. EVERETT: Objection to form.         16       BY THE WITNESS:         17       A. Or most often.         18       0. Or in another manner of speaking, not         19       always?         20       MS. EVERETT: Objection to form.         21       BY THE WITNESS:         22       A. There are always exceptions to certain |    |   |

|  | 22 | A. There are always exceptions to certain           |
|  |    |   |
|  |    |   |
|  |    |   |
|  |    |   |
|    |  | ιαε |
|----|--|-----|
| 1  | things in pharmaceutical formulations.             | _   |
| 2  | Q. And this sentence is speaking by using the      |     |
| 3  | word "usually" to those potential exceptions,      |     |
| 4  | correct?   |     |
| 5  | MS. EVERETT: Objection to form.                    |     |
| 6  | BY THE WITNESS:                                    |     |
| 7  | A. I think it's warning the reader that this       |     |
| 8  | polymer, it's anionic. So it's going to be         |     |
| 9  | incompatible with cationic drugs.                  |     |
| 10 | Q. But as you just testified, there are            |     |
| 11 | always exceptions, right?                          |     |
| 12 | A. There are often exceptions to those, yes.       |     |
| 13 | Q. So a person of ordinary skill focusing on       |     |
| 14 | the statement that we've been focused on in        |     |
| 15 | Lieberman 2104 at page 19 wouldn't understand      |     |
| 16 | Lieberman to say that CMC will never work with     |     |
| 17 | cationic drugs, right?                             |     |
| 18 | A. They would understand it's usually              |     |
| 19 | incompatible with cationic drugs. Actually in the  |     |
| 20 | same reference on page 11, for example, where it   |     |
| 21 | talks about chemical incompatibilities, you know,  |     |
| 22 | it says with similar language sodium carboxymethyl |     |
|    |  |     |
|    |  |     |
|    |  |     |
|    |  |     |

| 1       cellulose will usually precipitate with cationic         2       molecules. So it's just something that would have         3       been expected to happen.         4       0. And can you help me out on page 11 where         5       you're referring to, Dr. Smyth?         6       A. Down at the bottom there it says "F,         7       Chemical incompatibilities" and it would be the         8       second sentence.         9       0. That sentence uses "usually" as well,         10       doesn't it?         11       A. "Usually" precipitates with cationic         12       molecules.         13       0. And that doesn't mean always?         14       A. Usually does not mean always?         15       0. Right. So including this statement that         16       you've additionally identified on page 11 of         17       Lieberman 2104, a person of ordinary skill reading         18       either of the statements on page 11 or 19 wouldn't         19       moke With cationic drugs, right?         21       MS. | 21 MS. EVERETT: Objection to form.  | 19 | understand Lieberman to be saying that CMC will    |
|   | 20 | never work with cationic drugs, right?             |
| 22 BY THE WITNESS:  | 21 | MS. EVERETT: Objection to form.                    |
|   | 22 | BY THE WITNESS:                                    |
|   |    |  |
|   |    |  |
|   |    |  |
|   |    |  |

Г

| 1  | A. What it's saying is that, you know, the          |
|----|---|
| 2  | reader should use caution that this is an anionic   |
| 3  | polymer and it's usually incompatible with cationic |
| 4  | drugs.  |
| 5  | Q. Right. And as you've testified, I have it        |
| 6  | here in front of me, usually does not mean always?  |
| 7  | A. It does not mean always, but it means most       |
| 8  | often.  |
| 9  | Q. But there are exceptions, right?                 |
| 10 | A. There could be exceptions.                       |
| 11 | Q. And the two sentences that you've                |
| 12 | identified in Exhibit 2104, Lieberman chapter 4 on  |
| 13 | both 11 and 19, they use the word "usually,"        |
| 14 | correct?  |
| 15 | A. They do.   |
| 16 | Q. So if there are exceptions and it doesn't        |
| 17 | always mean always, meaning the word "usually," the |
| 18 | person of ordinary skill wouldn't understand        |
| 19 | Lieberman to be saying that CMC will never work     |
| 20 | with cationic drugs, right? That's a fair           |
| 21 | understanding of what's being said there?           |
| 22 | MS. EVERETT: Objection to form.                     |
|    |   |
|    |   |
|    |   |
|    |   |

| 1  | BY THE WITNESS:                                    |
|----|--|
| 2  | A. I think a person reading this document          |
| 3  | would understand that in most cases not always,    |
| 4  | but in most cases carboxymethyl cellulose is       |
| 5  | incompatible with cationic drugs and electrolytes. |
| 6  | Q. Okay. So there are potentially                  |
| 7  | exceptions, not always?                            |
| 8  | A. I agree with that.                              |
| 9  | Q. Beyond the Lieberman reference that we've       |
| 10 | been treating together in terms of Patent Owner's  |
| 11 | Exhibit 2113 and Patent Owner's Exhibit 2104, did  |
| 12 | you consider any other references besides the      |
| 13 | Lieberman reference for your opinion in paragraph  |
| 14 | 45 of your second declaration that a person of     |
| 15 | ordinary skill would have been discouraged from    |
| 16 | using MCC and CMC with azelastine?                 |
| 17 | A. You know, Lieberman is one of these             |
| 18 | authoritative textbooks that's sort of well known  |
| 19 | in the field and people rely upon it. I think      |
| 20 | that's the only one that l've cited here. So it's  |
| 21 | the only one that l've turned to.                  |
| 22 | Q. Okay. So your analysis of the                   |
|    |  |
|    |  |
|    |  |
|    |  |

| 1  | incompatibility of azelastine with CMC started with |
|----|---|
| -  |   |
| 2  | and ended with the Lieberman text; is that fair?    |
| 3  | MS. EVERETT: Objection to form.                     |
| 4  | BY THE WITNESS:                                     |
| 5  | A. Well, my own knowledge of formulating with       |
| 6  | CMC, obviously experience with that as well.        |
| 7  | Q. But you didn't look to any other                 |
| 8  | references, correct?                                |
| 9  | A. Not that I can recall. Essentially all           |
| 10 | l'm citing here is Lieberman as far as these        |
| 11 | numbers indicate.                                   |
| 12 | Q. Well, just to confirm, you can actually          |
| 13 | take your time and look at paragraphs 45 through 49 |
| 14 | to see if you find any other references that you    |
| 15 | may have looked to besides the Lieberman text.      |
| 16 | (Witness reviewing document.)                       |
| 17 | BY THE WITNESS:                                     |
| 18 | A. I guess in CIP-2061.                             |
| 19 | Q. Just for clarity of the record, CIP-2061         |
| 20 | is the is a lab notebook, right?                    |
| 21 | A. That is correct.                                 |
| 22 | Q. And that's not a well understood and used        |
|    |   |
|    |   |
|    |   |
|    |   |

It's not a textbook, no, but it does

| 5 | Q. But it's not a reference in the sense that     |
|---|---|
| 6 | it's a peer reviewed reference such as Lieberman, |
| 7 | right?  |

text as you characterize Lieberman, right?

8 A. No. The notebook is not publicly9 available. It could be peer reviewed.

1

2

3

4

22

Α.

incompatibility.

10 But you don't have any information that Q. 11 that 2061 lab notebook was peer reviewed, correct? 12 A. Generally lab notebooks are countersigned 13 so they have to be reviewed by another scientist, 14 but I can't remember if that one was countersigned. 15 In looking through the balance of those Q. paragraphs, Lieberman is the only publicly 16 17 available peer reviewed reference that you relied 18 upon to form your opinions about the 19 incompatibility of azelastine with CMC, right?

A. That's the only reference that was
publicly available that I have cited there, yes.

Q. And you didn't look for anything beyond

|    |  | . ~2 |
|----|--|------|
| 1  | Lieberman of that form in order to formulate your  |      |
| 2  | opinion as to the incompatibility of CMC with      |      |
|    |  |      |
| 3  | azelastine, right?                                 |      |
| 4  | MS. EVERETT: Objection to form.                    |      |
| 5  | BY THE WITNESS:                                    |      |
| 6  | A. As I said before, Lieberman is, you know,       |      |
| 7  | one of these sort of well-known, well-accepted     |      |
| 8  | textbooks that in multiple places in Lieberman     |      |
| 9  | states essentially, you know, that CMC is          |      |
| 10 | incompatible with electrolytes and cationic drugs. |      |
| 11 | That was a known fact, it still is today. There    |      |
| 12 | was no need to provide many additional references. |      |
| 13 | Q. If you could, I think you have one of the       |      |
| 14 | Lieberman references in front of you, would you    |      |
| 15 | look at Lieberman which one is in front of you?    |      |
| 16 | A. The 2104.                                       |      |
| 17 | Q. Okay. If you look at Bates-numbered page        |      |
| 18 | 3, you would agree with me that Lieberman was      |      |
| 19 | published in 1996, correct?                        |      |
| 20 | A. Yes. It has a copyright 1996.                   |      |
| 21 | Q. And the time frame for addressing               |      |
| 22 | patentability of the claims in the '620 Patent     |      |
|    |  |      |
|    |  |      |
|    |  |      |
|    |  |      |

includes up to 2002 generally, right? 1 2 Α. The prior date is somewhere around June of 2002 | think. 3 So in view of the fact that you didn't 4 Q. look for any of these other references, if there 5 are any other references that contradict what 6 7 Lieberman says about compatibility of MCC and CMC with cationic drugs, would you be willing to 8 9 revisit your opinion about that compatibility between azelastine as a cationic drug and CMC and 10 MCC? 11 12 Α. What I think a person of ordinary skill 13 would have known is what is -- would have read is 14 what's known and described in Lieberman. That's a very well-known interaction between these anionic 15 polymers that you should avoid cationic drugs and 16 17 usually they precipitate. There may be other 18 reports of specific individual drugs that may have 19 been successfully formulated in different types of 20 formulations, maybe for different therapeutic 21 purposes, but that wouldn't change my opinion that 22 a person of ordinary skill would have been

| 1  | discouraged from using a thickening agent like CMC  |
|----|---|
| 2  | because of this interaction with cationic drugs.    |
| 3  | Q. So as you just testified, there may be           |
| 4  | reports of other specific individual drugs that may |
| 5  | have been successfully formulated in different      |
| 6  | types of formulations for different therapeutic     |
| 7  | purposes, right? That's your testimony?             |
| 8  | A. That's what I said, yes.                         |
| 9  | Q. So in your expert opinion it doesn't             |
| 10 | matter what other teachings are out there in the    |
| 11 | prior art, including those that you've just         |
| 12 | indicated may exist, you're just going to stick     |
| 13 | with your opinion that a person of ordinary skill   |
| 14 | would have been discouraged from using MCC and CMC  |
| 15 | with azelastine focusing on Lieberman?              |
| 16 | MS. EVERETT: Objection to form.                     |
| 17 | BY THE WITNESS:                                     |
| 18 | A. So in some cases a gel rigid gel may be          |
| 19 | sought where cross-linking of the polymer is        |
| 20 | actually a positive thing because you don't want    |
| 21 | this you know, this gel that may be orally taken    |
| 22 | to disintegrate because it would encapsulate the    |
|    |   |
|    |   |
|    |   |
|    |   |

| 1  | drug. So in some cases you need a cationic          |
|----|---|
| 2  | cross-linker for an anionic polymer. That would be  |
| 3  | one example where CMC could be used with a cationic |
| 4  | cross-linking agent. So that's a very different     |
| 5  | case to a nasal spray that's suitably you know,     |
| 6  | for suitable administration to the nasal passages,  |
| 7  | the viscosity and osmolarity, and the like. So      |
| 8  | there might be cases where you can find a cationic  |
| 9  | drug with an anionic polymer, but that's different  |
| 10 | to what I'm saying here.                            |
| 11 | Q. Okay. So let's just take the case that           |
| 12 | we're talking about a situation where the cationic  |
| 13 | drug is being dissolved as a hydrochloride salt and |
| 14 | there's another active ingredient that's being      |
| 15 | suspended with the assistance of CMC and MCC in     |
| 16 | that case. If there's a reference that shows that   |
| 17 | that combination is not incompatible, would you     |
| 18 | consider that germane to your opinion that CMC and  |
| 19 | MCC are not compatible with cationic drugs across   |
| 20 | the board?  |
| 21 | MS. EVERETT: Objection, form.                       |
| 22 | BY THE WITNESS:                                     |
|    |   |
|    |   |
|    |   |

| Hugh David  | Charles | Smuth    |         | 21          | 2018 |
|-------------|---------|----------|---------|-------------|------|
| nugri Daviu | Unaries | Silly Ch | January | <b>з</b> г, | 2010 |

| 1  | A. That's kind of a long question and l            |
|----|--|
| 2  | forget what you said at the start.                 |
| 3  | Q. So the example you were giving in response      |
| 4  | to my prior question related to a gel. Do you      |
| 5  | agree with that?                                   |
| 6  | A. Yes.  |
| 7  | Q. So let's just assume that there's an            |
| 8  | example where we have a situation where there's a  |
| 9  | cationic drug being dissolved as a hydrochloride   |
| 10 | salt and there's another second active component   |
| 11 | ingredient that's being suspended with the         |
| 12 | assistance of MCC and CMC. Do you understand that  |
| 13 | hypothetical?                                      |
| 14 | A. So there's a cationic drug and you've got       |
| 15 | MCC and CMC?                                       |
| 16 | Q. Yes. And it's not a gel.                        |
| 17 | A. It's not a gel.                                 |
| 18 | Q. Do you understand that?                         |
| 19 | A. I understand that preface.                      |
| 20 | Q. And there's another active ingredient           |
| 21 | that's being suspended with the use of MCC or CMC. |
| 22 | A. Depending on the application, if it was a       |
|    |  |
|    |  |
|    |  |
|    |  |

| <ol> <li>nasal spray that would be very relevant. If it was</li> <li>a situation where you needed a high viscosity it</li> <li>wouldn't be so relevant to nasal sprays because</li> <li>obviously you can't have very high viscosity for a</li> <li>nasal spray.</li> <li>Q. But if that example formulation existed</li> <li>where we had a cationic drug, MCC, CMC, and another</li> </ol> |
|--|
| <ul> <li>3 wouldn't be so relevant to nasal sprays because</li> <li>4 obviously you can't have very high viscosity for a</li> <li>5 nasal spray.</li> <li>6 Q. But if that example formulation existed</li> </ul>  |
| <ul> <li>4 obviously you can't have very high viscosity for a</li> <li>5 nasal spray.</li> <li>6 Q. But if that example formulation existed</li> </ul>   |
| <ul> <li>5 nasal spray.</li> <li>6 Q. But if that example formulation existed</li> </ul>   |
| 6 Q. But if that example formulation existed   |
|  |
| 7 where we had a cationic drug, MCC, CMC, and another  |
|  |
| 8 active ingredient that was being suspended,  |
| 9 wouldn't you agree that that would be something  |
| 10 that a person of ordinary skill would take into   |
| 11 account when considering whether or not azelastine  |
| 12 was fundamentally incompatible with CMC?  |
| 13 A. They would likely take those sort of   |
| 14 observations into account, but I think they would   |
| 15 take into account in the context of Lieberman which   |
| 16 says, you know, usually there is an incompatibility   |
| 17 between those two types of polymers and drugs.  |
| 18 Q. So they would at least take it into  |
| 19 account?  |
| 20 A. If it was relevant to an internasal nasal  |
| 21 spray formulation.  |
| 22 Q. And, again, if it was relevant, as you   |
|  |
|  |
|  |
|  |

| 1  | said, those formulations that demonstrated that CMC |
|----|---|
| 2  | is not fundamentally incompatible with cationic     |
| 3  | drugs would inform one of skill in the art to       |
| 4  | potentially experiment with CMC and the cationic    |
| 5  | drug?   |
| 6  | A. Sorry. Can you say that again, just              |
| 7  | repeat it.  |
| 8  | Q. Sure.  |
| 9  | So earlier I asked you if there was an              |
| 10 | example formulation that existed where we had a     |
| 11 | cationic drug, MCC, CMC, and another active         |
| 12 | ingredient that was suspended, you would agree that |
| 13 | one of ordinary skill would take that into account  |
| 14 | as part of the teachings of the prior art, correct? |
| 15 | A. If it was relevant to the formulation of a       |
| 16 | nasal spray combining an antihistamine and a        |
| 17 | steroid.  |
| 18 | Q. So let's just set aside the specific             |
| 19 | azelastine portion of what we're discussing. Okay.  |
| 20 | If it was relevant generally to whatever            |
| 21 | formulation somebody of skill in the art is working |
| 22 | on  |
|    |   |
|    |   |
|    |   |

Γ

Page 50

Hugh David Charles Smyth - January 31, 2018

| 1  | A. Why would we set aside the azelastine?          |
|----|--|
| 2  | Q. So let's start again with the example           |
| 3  | formulation that we've been working with. So we    |
| 4  | have an example formulation that exists in the     |
| 5  | prior art with a cationic drug, MCC, CMC, and      |
| 6  | another ingredient that's suspended, and you agree |
| 7  | that one of ordinary skill would take that into    |
| 8  | account as part of the teachings of the prior art  |
| 9  | if it's relevant, right?                           |
| 10 | A. Yeah, if it's relevant, you know,               |
| 11 | depending on the concentrations of those           |
| 12 | ingredients, depending on the types of formulation |
| 13 | that it represents, depending on, you know, what   |
| 14 | site of administration it was being administered   |
| 15 | to, you know, many other factors would play into   |
| 16 | what a POSA would look to as they were looking to  |
| 17 | develop an internasal formulation.                 |
| 18 | MS. EVERETT: Andrew, we've been going for          |
| 19 | over an hour. Would this be a good time to take a  |
| 20 | break.   |
| 21 | MR. CHESLOCK: Yeah, we can take a break.           |
| 22 | Let's go off the record.                           |
|    |  |
|    |  |
|    |  |
|    |  |

|    |   | Page 51 |
|----|---|---------|
| 1  | (A short break was had.)                            |         |
| 2  | BY MR. CHESLOCK:                                    |         |
| 3  | Q. Dr. Smyth, did you discuss the substance         |         |
| 4  | of your testimony during the break we just had with |         |
| 5  | your counsel?                                       |         |
| 6  | A. No.  |         |
| 7  | Q. You're generally familiar with the concept       |         |
| 8  | of nasal sprays, right?                             |         |
| 9  | A. Sure.  |         |
| 10 | Q. And you're similarly generally                   |         |
| 11 | knowledgeable with the concept of nasal drops?      |         |
| 12 | A. I'm familiar with nasal drops, yes.              |         |
| 13 | Q. They're both useful ways of administering        |         |
| 14 | drugs to the nose, right?                           |         |
| 15 | A. In general nasal sprays are a preferred          |         |
| 16 | administration because of the deposition on the     |         |
| 17 | nasal cavity, inside the nasal cavity is much       |         |
| 18 | better than nasal drops.                            |         |
| 19 | Q. But they're both useful for administration       |         |
| 20 | purposes even though one's more preferable than the |         |
| 21 | other?  |         |
| 22 | A. Sure. Nasal drops have been used in the          |         |
|    |   |         |
|    |   |         |
|    |   |         |
| L  | GregoryEdwards, LLC   Worldwide Court Reporting     |         |

| -  |  | ug |
|----|--|----|
| 1  | past. They have sort of gone out of favor and      |    |
| 2  | nasal sprays have really taken the predominant     |    |
| 3  | focus of nasal administration.                     |    |
| 4  | Q. So you wouldn't consider the two to be          |    |
| 5  | synonymous, right?                                 |    |
| 6  | A. Nasal drops and nasal sprays are very           |    |
| 7  | different types of dosage forms.                   |    |
| 8  | Q. And when you say they're very different         |    |
| 9  | types of dosage forms, that means that they're     |    |
| 10 | different methods of actually administering the    |    |
| 11 | drug, right?                                       |    |
| 12 | A. Different methods of administration and         |    |
| 13 | where they deposit in the nasal cavity and their   |    |
| 14 | absorption profiles, things like that.             |    |
| 15 | Q. So besides some of the differences you've       |    |
| 16 | already highlighted, what would be another         |    |
| 17 | difference between a nasal spray versus a nasal    |    |
| 18 | drop form of administration?                       |    |
| 19 | A. For example, a nasal spray has a sort of        |    |
| 20 | narrower design requirement for viscosity. A nasal |    |
| 21 | drop could be more viscous, for example. A nasal   |    |
| 22 | spray needs to be in a specialized type of         |    |
|    |  |    |
|    |  |    |
|    |  |    |
|    |  |    |

|    |  | 0 |
|----|--|---|
| 1  | container for administration.                      |   |
|    |  |   |
| 2  | Q. Okay. So viscosity would be an example of       |   |
| 3  | a difference between a nasal spray formulation and |   |
| 4  | a nasal drop formulation, right?                   |   |
| 5  | A. It could be.                                    |   |
| 6  | Q. And I believe you just testified that a         |   |
| 7  | nasal spray has a narrower design requirement for  |   |
| 8  | viscosity, right, as compared to a nasal drop?     |   |
| 9  | A. Right.  |   |
| 10 | Q. So to close that out, depending on which        |   |
| 11 | nasal drop and which nasal spray you're comparing  |   |
| 12 | between, viscosity could be a difference between   |   |
| 13 | the two?   |   |
| 14 | A. That's a possibility, yes.                      |   |
| 15 | Q. Okay. Focusing in on viscosity and what         |   |
| 16 | you have testified to as the narrower design       |   |
| 17 | requirement for viscosity, what would be an        |   |
| 18 | acceptable range of viscosities for a formulation  |   |
| 19 | to act as a suitable nasal spray, in your opinion? |   |
| 20 | A. It would be a range that could be used          |   |
| 21 | effectively to produce a nasal spray through a     |   |
| 22 | nasal spray device. So one with low enough         |   |
|    |  |   |
|    |  |   |
|    |  |   |
|    |  |   |

| 1  | viscosity such that a spray is formed, taking into |
|----|--|
| 2  | account other formulation considerations as well.  |
| 3  | Q. Okay. So it would depend on the type of         |
| 4  | spray and the container would be one thing that    |
| 5  | would affect the range of suitability viscosities; |
| 6  | is that what your testimony is?                    |
| 7  | A. It would take into account that it needs        |
| 8  | to be sprayed through a nasal spray device.        |
| 9  | Q. And what about temperature, would that          |
| 10 | affect the suitable viscosity range for a          |
| 11 | formulation to act as a suitable nasal spray?      |
| 12 | MS. EVERETT: Objection, outside the scope          |
| 13 | of Dr. Smyth's declaration.                        |
| 14 | BY THE WITNESS:                                    |
| 15 | A. Viscosity changes with temperature, that's      |
| 16 | well known. However, most formulations have to     |
| 17 | operate at ambient temperature. So that's where    |
| 18 | they're tested.                                    |
| 19 | Q. So in terms of a viscosity, you would           |
| 20 | agree with me that characterizing viscosity        |
| 21 | relative to water is a common way of understanding |
| 22 | viscosity; would you agree with that?              |
|    |  |
|    |  |
|    |  |
| 1  |  |

| 1  | A. Can you say that again.                         |
|----|--|
| 2  | Q. The understanding of viscosity relative to      |
| 3  | water is one way that we can understand what the   |
| 4  | viscosity requirements would be for a suitable     |
| 5  | nasal spray; would you agree with that?            |
| 6  | A. It's certainly possible you can compare         |
| 7  | the viscosity of a formulation to the viscosity of |
| 8  | water.   |
| 9  | Q. So with that in mind, would water at            |
| 10 | 10 degrees Celsius have an acceptable viscosity to |
| 11 | be a suitable nasal spray?                         |
| 12 | MS. EVERETT: Objection, outside the scope          |
| 13 | of Dr. Smyth's declaration.                        |
| 14 | MR. CHESLOCK: And I'd caution counsel              |
| 15 | that I have the Trial Practice Guide and I believe |
| 16 | that to be an inappropriate objection. You're more |
| 17 | than welcome to interject objections to form, and  |
| 18 | if you want we can have a separate discussion      |
| 19 | without the witness here and I can explain to you  |
| 20 | why that question is not outside the scope if you  |
| 21 | want to do that.                                   |
| 22 | MS. EVERETT: I'll keep my objection on             |
|    |  |
|    |  |
|    |  |
|    |  |
|    | GregoryEdwards, LLC   Worldwide Court Reporting    |

|    |   | Fage |
|----|---|------|
| 1  | the record. You can continue.                       |      |
| 2  | BY THE WITNESS:                                     |      |
| 3  | A. So I'm not sure why we would be                  |      |
| 4  | considering a 10-degree Celsius water viscosity for |      |
| 5  | nasal sprays.                                       |      |
| 6  | Q. How about instead of 10 degrees how              |      |
| 7  | about at room temperature. Would you agree that     |      |
| 8  | water at room temperature would have a suitable     |      |
| 9  | viscosity for a nasal spray?                        |      |
| 10 | A. There are formulations that don't contain        |      |
| 11 | any viscosity-modifying agents that I've tested     |      |
| 12 | that predominantly are water and are suitably       |      |
| 13 | sprayed from a nasal spray applicator, yes.         |      |
| 14 | Q. At room temperature?                             |      |
| 15 | A. At room temperature.                             |      |
| 16 | Q. So just to clarify that, based on your           |      |
| 17 | experience considering what a suitable viscosity    |      |
| 18 | would be, water at room temperature would have a    |      |
| 19 | viscosity that would be suitable for a nasal spray, |      |
| 20 | right?  |      |
| 21 | A. Most likely, yes, to form an aerosol             |      |
| 22 | ploom. There's other aspects to viscosity in nasal  |      |
|    |   |      |
|    |   |      |
|    |   |      |
|    | GregoryEdwards IIC   Worldwide Court Reporting      |      |

Г

| 1  | sprays such as residence time in the nasal cavity.  |
|----|---|
| 2  | Q. And so, again, trying to understand what a       |
| 3  | suitable range would be, as the temperature of      |
| 4  | water is lowered is there a point at which it would |
| 5  | exhibit a viscosity that would render it not        |
| 6  | suitable as a nasal spray?                          |
| 7  | A. I would need to look at I mean,                  |
| 8  | certainly if the product was frozen it could not be |
| 9  | sprayed and I think at 4 degrees Celsius water has  |
| 10 | its highest viscosity, but I cannot remember what   |
| 11 | viscosity that is or if anyone's actually ever      |
| 12 | tested that in a nasal spray device.                |
| 13 | Q. So to quantify maybe some limitations for        |
| 14 | what the viscosity should be for a suitable nasal   |
| 15 | spray, can you say one way or another whether a     |
| 16 | viscosity between 1 and 1.3 millipascals would be   |
| 17 | sufficient for a nasal spray in your view?          |
| 18 | MS. EVERETT: Objection to form.                     |
| 19 | BY THE WITNESS:                                     |
| 20 | A. You know, I would need to look that up.          |
| 21 | Q. But certainly a person of ordinary skill         |
| 22 | at the time of the '620 Patent would have known     |
|    |   |
|    |   |
|    |   |

| <ul> <li>that solution viscosity has an effect on the</li> <li>suitability of the formulation as a nasal spray,</li> <li>right?</li> <li>A. Yes. They would consider, you know,</li> <li>viscosity as a formulation parameter to look at</li> <li>Q. And they would know sorry.</li> <li>A when developing a nasal spray.</li> <li>Q. And that person of ordinary skill before</li> <li>the time of the '620 Patent would have known how to</li> <li>vary viscosity and test for a formulation that</li> <li>would have been suitable for a nasal spray in your</li> <li>opinion, correct?</li> <li>A. Viscosity is something that can be</li> <li>modified by using formulation approaches such as</li> <li>changing the type of or concentration of the</li> <li>viscosity-modifying agents such as, you know,</li> <li>residence time in the nasal cavity, providing</li> <li>physical stability for suspensions.</li> <li>Q. All right. So just to be clear, a person</li> <li>of ordinary skill before the '620 Patent would have</li> </ul> |    |   | i ago |
|---|----|---|-------|
| <ul> <li>suitability of the formulation as a nasal spray,</li> <li>right?</li> <li>A. Yes. They would consider, you know,</li> <li>viscosity as a formulation parameter to look at</li> <li>Q. And they would know sorry.</li> <li>A when developing a nasal spray.</li> <li>Q. And that person of ordinary skill before</li> <li>the time of the '620 Patent would have known how to</li> <li>vary viscosity and test for a formulation that</li> <li>would have been suitable for a nasal spray in your</li> <li>opinion, correct?</li> <li>A. Г

| 1  | known that solution viscosity has an effect on the  |
|----|---|
| 2  | suitability of a formulation as a nasal spray and   |
| 3  | they would have the knowledge to vary that          |
| 4  | viscosity and perform tests to determine if it was  |
| 5  | suitable, correct, in general?                      |
| 6  | A. In general formulators, persons of               |
| 7  | ordinary skill would look to study viscosity and    |
| 8  | the effects on the formulation.                     |
| 9  | Q. Before the '620 Patent, right?                   |
| 10 | A. Sure. Yes.                                       |
| 11 | Q. All right. If you could, please, take            |
| 12 | your second declaration out again and in particular |
| 13 | l'd like you to go to paragraph 23. It starts on    |
| 14 | page 10. Are you there?                             |
| 15 | A. Yes.   |
| 16 | Q. Okay. I'd like you to now go to the next         |
| 17 | page because paragraph 23 continues onto the next   |
| 18 | page. Do you see there at paragraph 23 you make     |
| 19 | the statement that "Cipla also told the patent      |
| 20 | examiner that the term 'suitable for nasal          |
| 21 | administration' was synonymous with the term 'nasal |
| 22 | spray' as used in the '620 Patent"; do you see      |
|    |   |
|    |   |
|    |   |
|    |   |

| 1  | that?   |
|----|---|
| 2  | A. I see that, yes.                                 |
| 3  | Q. And you recall that the term "suitable for       |
| 4  | nasal administration" is present in claim 1, right, |
| 5  | of the '620 Patent, which you can refer to to       |
| 6  | confirm that if you'd like?                         |
| 7  | A. "Suitable for nasal administration" is in        |
| 8  | claim 1, yes.                                       |
| 9  | Q. Okay. So it's your understanding that            |
| 10 | claim 1 because it cites "suitable for nasal        |
| 11 | administration" that the formulation that's         |
| 12 | actually claimed by claim 1 must be suitable as a   |
| 13 | nasal spray; that's your opinion, right?            |
| 14 | A. Cipla during the prosecution of the patent       |
| 15 | told the examiner that those two terms were         |
| 16 | synonymous.   |
| 17 | Q. Right. So claim 1 has to be a nasal              |
| 18 | spray?  |
| 19 | A. Claim 1 is a nasal spray, yes.                   |
| 20 | Q. If you could in the '620 Patent in column        |
| 21 | 12 look at claim 14.                                |
| 22 | A. Yes.   |
|    |   |
|    |   |
|    |   |
|    |   |

Г

| Page | 61 |
|------|----|
| гаде | 01 |

| 1  | Q. Do you see that claim 14?                        |
|----|---|
| 2  | A. Yes.   |
| 3  | Q. And that claim 14 depends from claim 1,          |
| 4  | right?  |
| 5  | A. Yes.   |
| 6  | Q. And claim 14 reads "The pharmaceutical           |
| 7  | formulation of claim 1, wherein said dosage form    |
| 8  | suitable for nasal administration comprises nasal   |
| 9  | drops"; do you see that?                            |
| 10 | A. Yes.   |
| 11 | Q. And as we discussed earlier, nasal drops         |
| 12 | and nasal sprays are different in your opinion?     |
| 13 | A. Yes.   |
| 14 | Q. And in addition as we've discussed a             |
| 15 | couple of times today, dependent claims contain all |
| 16 | the limitations of the independent claim from which |
| 17 | they depend; do you agree with that?                |
| 18 | A. Yes.   |
| 19 | Q. And the dependent claim can't be broader         |
| 20 | than its independent claim, right?                  |
| 21 | A. That's right.                                    |
| 22 | Q. So claim 14 cannot be broader than               |
|    |   |
|    |   |
|    |   |
|    |   |

Page 62 1 independent claim 1, right? 2 Α. Right. 3 Q. And claim 14 includes all the limitations of independent claim 1? 4 Α. Yes. 5 Q. So you would agree that based on that 6 7 logic claim 1 must be broad enough to capture the nasal drops of claim 14, right? 8 9 A. Or claim 14 is narrower than the nasal sprav formulation in claim 1. 10 11 Q. Okay. So your testimony before was nasal 12 sprays and nasal drops are different; do you agree with that? 13 14 Α. They're different ways of administering to the nasal cavity, yes. 15 And your opinion based on, in part, the 16 Q. 17 language in claim 1 and what Cipla said to the 18 examiner is that claim 1 is limited to a nasal 19 spray; do you agree with that? 20 A. I say that a pharmaceutical -- sorry --21 the term "suitable for nasal administration" is 22 synonymous with the term "nasal spray."

Γ

| 1  | Q. So if nasal sprays and nasal drops are           |
|----|---|
| 2  | different, it's logically not possible for claim 14 |
| 3  | to be narrower than claim 1? Let me state it a      |
| 4  | different way. It's not possible for what's         |
| 5  | claimed in dependent claim 14 to be a subset of     |
| 6  | what's claimed in claim 1 because nasal drops and   |
| 7  | nasal sprays are different?                         |
| 8  | A. Yeah. I think claim 14 nasal drops               |
| 9  | cannot be a subset of nasal sprays, I'm just        |
| 10 | thinking about that.                                |
| 11 | Q. Let me try it a different way. You would         |
| 12 | agree based on your understanding of the way patent |
| 13 | claims work, dependent and independent claims, that |
| 14 | independent claim 1 cannot be limited to nasal      |
| 15 | sprays if there's a dependent claim that separately |
| 16 | claims nasal drops because the two are different?   |
| 17 | A. Yeah. I think that claim 14 is because           |
| 18 | it comprises nasal drops is in a different          |
| 19 | category, it's not a nasal spray as we've           |
| 20 | discussed, but I think in the file history it's     |
| 21 | clear that claim what Cipla is defining as          |
| 22 | "suitable for nasal administration" was synonymous  |
|    |   |
|    |   |
|    |   |
| L  |   |

| 1  | with the term "nasal spray." So yeah, I'm not sure  |
|----|---|
| 2  | how to you know, in terms of legal claims how 14    |
| 3  | fits under 1.                                       |
| 4  | Q. Okay. But you can agree with me that             |
| 5  | there's at least an inconsistency with an           |
| 6  | understanding that claim 1 is limited to nasal      |
| 7  | sprays when claim 14 as a dependent claim claims    |
| 8  | nasal drops? You would agree with at least that     |
| 9  | much logically, correct?                            |
| 10 | MS. EVERETT: Objection, form.                       |
| 11 | BY THE WITNESS:                                     |
| 12 | A. I understand claim 14 to be a separate           |
| 13 | sort of I'm not sure how to I guess reconcile 14    |
| 14 | nasal drops with the nasal spray definition, but in |
| 15 | the file history, you know, what they explicitly    |
| 16 | state is, you know, "suitable for administration"   |
| 17 | is synonymous with the term "nasal spray."          |
| 18 | Q. So sitting here right now by your                |
| 19 | testimony you just gave, you're just not able to    |
| 20 | reconcile the inconsistency between dependent claim |
| 21 | 14 that's specific to nasal drops and your          |
| 22 | understanding of independent claim 1 that it's      |
|    |   |
|    |   |
|    |   |
|    |   |

| 1  | limited to nasal sprays, right?                   |
|----|---|
| 2  | A. Drops are different formulations from          |
| 3  | nasal sprays and maybe during the amendments they |
| 4  | just didn't consider 14 amending 14. It's hard    |
| 5  | to say why it would be this inconsistency.        |
| 6  | Q. And you sitting here right now can't           |
| 7  | reconcile that, correct?                          |
| 8  | A. I don't know what they were thinking when      |
| 9  | they kept claim 14 as a nasal drop.               |
| 10 | Q. You're familiar with osmolality, correct?      |
| 11 | A. Yes.   |
| 12 | Q. And osmolality relates to physiological        |
| 13 | osmotic pressure, right?                          |
| 14 | A. It relates to the osmotic pressure across      |
| 15 | membranes.  |
| 16 | Q. For example, in a nasally-administered         |
| 17 | drug there would be a osmolality parameter?       |
| 18 | A. It would be a parameter a formulation          |
| 19 | characteristic.                                   |
| 20 | Q. A formulation characteristic, let's use        |
| 21 | that. So as a formulation characteristic as you   |
| 22 | just testified osmolality would be something a    |
|    |   |
|    |   |
|    |   |
|    |   |

| -  |  |
|----|--|
| 1  | person of ordinary skill would consider when       |
|    |  |
| 2  | formulating a nasally-administered drug before the |
| 3  | '620 Patent, right?                                |
| 4  | A. Osmolality is considered important for          |
| 5  | nasal formulations before the '620 Patent.         |
| 6  | Q. And adjustment of osmolality would have         |
| 7  | been made by using tonicity adjustors before the   |
| 8  | '620 Patent, right, in general?                    |
| 9  | A. In general there are certain agents called      |
| 10 | tonicity-adjusting agents that can be used to      |
| 11 | increase the tonicity of a formulation, not        |
| 12 | decrease.  |
| 13 | Q. So tonicity-adjusting agents or tonicity        |
| 14 | agents or isotonization agents as the '620 Patent  |
| 15 | refers to would have been things that were used    |
| 16 | prior to the '620 Patent to adjust osmolality,     |
| 17 | correct?   |
| 18 | A. Those agents would be used to adjust            |
| 19 | tonicity or to increase tonicity or osmolarity.    |
| 20 | Q. And osmolarity and osmolality are               |
| 21 | interchangeable, right?                            |
| 22 | A. Not quite. Osmolality is an                     |
|    |  |
|    |  |
|    |  |
|    |  |

| 1  | experimentally determined value, whereas osmolarity |
|----|---|
| 2  | is a theoretical calculation of the so there are    |
| 3  | slight differences.                                 |
| 4  | Q. Let's maybe focus on osmolality, then,           |
| 5  | just to make sure we're being clear because it's    |
| 6  | what we were talking about before.                  |
| 7  | A. Sure.  |
| 8  | Q. So based on all that testimony, use of the       |
| 9  | tonicity agents and the isotonicity agents, those   |
| 10 | were all well known in the prior art before the     |
| 11 | '620 Patent, right?                                 |
| 12 | A. A formulator would have known there were         |
| 13 | certain agents, tonicity-adjusting agents or other  |
| 14 | terms that one could use to increase the tonicity   |
| 15 | of a formulation.                                   |
| 16 | Q. So in formulating a nasally-administered         |
| 17 | drug before the '620 Patent what I believe you're   |
| 18 | testifying to is it was well within the knowledge   |
| 19 | of a person of ordinary skill to use these tonicity |
| 20 | adjustors or isotonation agents to adjust           |
| 21 | osmolality, right, well within the ability of a     |
| 22 | person of skill in the art before the '620 Patent?  |
|    |   |
|    |   |
|    |   |
|    |   |

Г

| 1  | A. You can adjust tonicity and isotonicity          |
|----|---|
| 2  | agents. Again, these are only substances when you   |
| 3  | add them you increase the tonicity. So they can't   |
| 4  | be used to adjust it downwards.                     |
| 5  | Q. But with that clarification, well within         |
| 6  | the skill of a person of ordinary skill before the  |
| 7  | '620 Patent for formulating nasally-administered    |
| 8  | drug?   |
| 9  | MS. EVERETT: Objection, form.                       |
| 10 | BY THE WITNESS:                                     |
| 11 | A. Depending on the type of formulation and         |
| 12 | the requirements, the other components, the         |
| 13 | interactions, compatibilities, osmolarity agents    |
| 14 | could be used to adjust.                            |
| 15 | Q. It certainly was in the formulator's tool        |
| 16 | kit, so to speak, before the '620 Patent?           |
| 17 | A. Certainly people had been adjusting              |
| 18 | formulations before the '620 Patent.                |
| 19 | Q. And the '620 Patent certainly wasn't the         |
| 20 | first example of a nasally-administered drug with   |
| 21 | an osmolality that didn't irritate patients when in |
| 22 | use, right?   |
|    |   |
|    |   |
|    |   |

| r  |   |
|----|---|
| 1  | A. Can you say that again.                          |
|    |   |
| 2  | Q. Sure. The '620 Patent certainly wasn't           |
| 3  | the first example of a nasally-administered drug    |
| 4  | with an osmolality that didn't irritate patients    |
| 5  | when in use, correct?                               |
| 6  | A. That is correct. There were several              |
| 7  | nasal internasal formulations that had been         |
| 8  | marketed and shown to be nonirritating.             |
| 9  | Q. And you're also familiar with pH, right?         |
| 10 | A. Sure.  |
| 11 | Q. And similar to osmolality that too would         |
| 12 | be a parameter a person of ordinary skill would     |
| 13 | consider would formulating a nasally-administered   |
| 14 | drug?   |
| 15 | A. PH is an important characteristic of a           |
| 16 | formulation for a number of different reasons. The  |
| 17 | stability of the drug, the tolerability of the      |
| 18 | formulation, interactions between components within |
| 19 | the formulation would be an important parameter to  |
| 20 | characterize for any formulation.                   |
| 21 | Q. And adjustment of pH is done generally           |
| 22 | through the addition of acids, bases, and buffering |
|    |   |
|    |   |
|    |   |
|    |   |
|    | GregoryEdwards, LLC   Worldwide Court Reporting     |

| 1  | substances, right?                                  |
|----|---|
| -  |   |
| 2  | A. You can adjust pH using acids and bases.         |
| 3  | Buffers are used to help maintain the pH at a       |
| 4  | particular value.                                   |
| 5  | Q. Okay. So in this circumstance we can have        |
| 6  | adjustment up or down in terms of pH, and with      |
| 7  | respect to the buffer substances as you've just     |
| 8  | testified, those can be used to maintain the        |
| 9  | existing pH level of a formulation; is that         |
| 10 | accurate?   |
| 11 | A. For the most part.                               |
| 12 | Q. And use of acids, bases, and buffering           |
| 13 | substances for purposes of adjustment in pH was     |
| 14 | well known in the prior art before the '620 Patent, |
| 15 | right?  |
| 16 | A. Adjusting pH is, you know, a very common         |
| 17 | formulation requirement, but, again, like the other |
| 18 | factors, osmolarity and viscosity, they must be     |
| 19 | considered in the totality of the formulation. So   |
| 20 | you can adjust a pH to a lower value to increase    |
| 21 | solubility, for example, but you may increase       |
| 22 | instability of the drug molecule or formulation     |
|    |   |
|    |   |
|    |   |
|    |   |

1 excipients.

| 2  | Q. Setting aside any of the other factors, I        |
|----|---|
| 3  | just want to know it's true that uses of acids,     |
| 4  | bases, and buffering substances was for for the     |
| 5  | purpose of adjusting of pH was well known within    |
| 6  | the prior art before the '620 Patent and within the |
| 7  | formulator's tool kit as we said before, right?     |
| 8  | A. So adjusting pH, you can't just adjust pH        |
| 9  | for one reason without considering the other        |
| 10 | effects that it's going to have on your             |
| 11 | formulation.  |
| 12 | Q. And I appreciate that, but my question was       |
| 13 | really simple. Use of bases, acids, and buffering   |
| 14 | substances for the purpose of adjusting pH was well |
| 15 | known by a person of ordinary skill in the prior    |
| 16 | art and was well within their tool kit before the   |
| 17 | '620 Patent, right?                                 |
| 18 | A. It's known you can adjust pH using acids         |
| 19 | and bases and maintain pH using buffers, but a      |
| 20 | formulator adjusts pH to optimize the balance       |
| 21 | between the formulation and those characteristics   |
| 22 | that are required for a pharmaceutical product.     |
|    |   |
|    |   |
|    |   |
|    |   |

| 1  | Q. You would agree with me that the                 |
|----|---|
| 2  | '620 Patent wasn't the first example of a nasally-  |
|    |   |
| 3  | administered drug with a pH that didn't irritate    |
| 4  | patients, right? You'd agree with that?             |
| 5  | A. There were other formulations, products          |
| 6  | that had been tested in clinical trials and had     |
| 7  | been shown they could be formulated at pH with      |
| 8  | other characteristics obviously that contribute to  |
| 9  | nasal irritation, such as osmolarity, that have     |
| 10 | been successfully developed.                        |
| 11 | Q. So that necessarily follows that use of at       |
| 12 | least bases, acids, or buffer substances to adjust  |
| 13 | pH would have been used by the formulators of the   |
| 14 | drugs that you mentioned well before the            |
| 15 | '620 Patent, right?                                 |
| 16 | A. For example, in the azelastine product           |
| 17 | which came before the '620 Patent they used a       |
| 18 | buffering system, a citric acid buffering system to |
| 19 | formulate the pH within required limits for         |
| 20 | azelastine in that particular product.              |
| 21 | Q. And I think you mentioned before that pH         |
| 22 | is an important characteristic for nasally-         |
|    |   |
|    |   |
|    |   |
|    |   |
| 1  | administered drugs, right?                          |
|----|---|
| 2  | A. It is. Well, for many pharmaceutical             |
| 3  | products, but in particular nasal because of the    |
| 4  | you know, the site of administration of the drug    |
| 5  | being into a mucosal surface, but also because of   |
| 6  | the influence that it has on solubility, stability, |
| 7  | and, you know, other aspects of the formulation.    |
| 8  | Q. And so in your opinion is there a high and       |
| 9  | low end range for pH that is appropriate for a      |
| 10 | nasally-administered drug?                          |
| 11 | A. There have been reported ranges for pH.          |
| 12 | Obviously it's best to be close to the              |
| 13 | physiological pH of the nasal cavity if possible    |
| 14 | for the tolerability. However, you've got to take   |
| 15 | into account, you know, solubility, stability,      |
| 16 | other effects that your pH is going to have in your |
| 17 | formulation. So it's kind of a balance.             |
| 18 | Q. What's the physiological pH of the average       |
| 19 | human nasal cavity?                                 |
| 20 | A. There's a variety of values that have been       |
| 21 | reported, but generally it's around 6.5 to 6.8,     |
| 22 | slightly acidic.                                    |
|    |   |
|    |   |
|    |   |

| Hugh David | Charles   | Smuth -  | lonuory | 21  | 2010 |

| nugn Daviu | 01101 165 | Silly Ch | January | 51, | 2010 |

|    |   | - 0- |
|----|---|------|
| 1  | Q. I'd like to go back to your second               |      |
|    |   |      |
| 2  | declaration again if we could. I think you still    |      |
| 3  | have that in front of you.                          |      |
| 4  | A. Yes.   |      |
| 5  | Q. If you could go to paragraph 40 which            |      |
| 6  | starts on page 25. Are you there?                   |      |
| 7  | A. Yes.   |      |
| 8  | Q. Okay. Do you see in the second sentence          |      |
| 9  | where you mention that in Dr. Herpin's reproduction |      |
| 10 | of Cramer formula 3 the pH was approximately 3 or   |      |
| 11 | below; do you see that?                             |      |
| 12 | A. I see that.                                      |      |
| 13 | Q. And then in that same paragraph, which I         |      |
| 14 | think is consistent with the average pH you just    |      |
| 15 | gave me for a human nasal cavity, you say that      |      |
| 16 | approximately 3 or below as found by Dr. Herpin are |      |
| 17 | well below the acceptable pH of a nasal             |      |
| 18 | formulation. "Such formulations would not be        |      |
| 19 | tolerable to patients and therefore would not be    |      |
| 20 | suitable for nasal administration." Do you see      |      |
| 21 | that?   |      |
| 22 | A. Yes.   |      |
|    |   |      |
|    |   |      |
|    |   |      |
|    |   |      |

Page 75

| <ol> <li>Q. And you would agree, as we've already</li> <li>discussed, that suitable for nasal administration</li> <li>is a requirement of at least claim 1 of the</li> <li>'620 Patent, right?</li> </ol> |
|---|
| 3 is a requirement of at least claim 1 of the   |
|   |
| 4 '620 Patent, right?   |
|   |
| 5 A. That's right.  |
| 6 Q. So I'd like to direct you to a different   |
| 7 claim of the '620 Patent which is in column 14,   |
| 8 claim 45. The first question I have is you'd agree  |
| 9 with me that claim 45 depends from independent  |
| 10 claim 1, right?  |
| 11 A. That's right.   |
| 12 Q. And would you also agree with me that   |
| 13 because claim 1 recites that the formulation is  |
| 14 suitable for nasal administration and claim 45   |
| 15 recites that the formulation includes a pH ranging   |
| 16 from 3 to 7, doesn't that indicate a pH of a   |
| 17 minimum 3 that's not suitable for nasal  |
| 18 administration?  |
| 19 A. So in claim 45 it would indicate that   |
| 20 anything less than 3 would be not suitable.  |
| 21 Q. Let me try that again. In your looking  |
| 22 at your declaration, your declaration indicates  |
|   |
|   |
|   |

That's what claim 45 of the '620 indicates</li> <li>that this formulation should be between 3.00 to 7.</li> </ul>   | 13 | right?  |
| <ul> <li>BY MR. CHESLOCK:</li> <li>Q. So by the claims of the '620 Patent</li> <li>doesn't claim 45 indicate that a pH of, for</li> <li>example, 3.00 is suitable for nasal administration?</li> <li>A. That's what claim 45 of the '620 indicates</li> <li>that this formulation should be between 3.00 to 7.</li> </ul>  | 14 | A. I see that.                                      |
| <ul> <li>Q. So by the claims of the '620 Patent</li> <li>doesn't claim 45 indicate that a pH of, for</li> <li>example, 3.00 is suitable for nasal administration?</li> <li>A. That's what claim 45 of the '620 indicates</li> <li>that this formulation should be between 3.00 to 7.</li> </ul>  | 15 | MS. EVERETT: Objection, form.                       |
| <ul> <li>doesn't claim 45 indicate that a pH of, for</li> <li>example, 3.00 is suitable for nasal administration?</li> <li>A. That's what claim 45 of the '620 indicates</li> <li>that this formulation should be between 3.00 to 7.</li> </ul>  | 16 | BY MR. CHESLOCK:                                    |
| <ul> <li>19 example, 3.00 is suitable for nasal administration?</li> <li>20 A. That's what claim 45 of the '620 indicates</li> <li>21 that this formulation should be between 3.00 to 7.</li> </ul>  | 17 | Q. So by the claims of the '620 Patent              |
| A. That's what claim 45 of the '620 indicates<br>that this formulation should be between 3.00 to 7.  | 18 | doesn't claim 45 indicate that a pH of, for         |
| 21 that this formulation should be between 3.00 to 7.  | 19 | example, 3.00 is suitable for nasal administration? |
|  | 20 | A. That's what claim 45 of the '620 indicates       |
| 22 Q. And likewise as another example, a pH of   | 21 | that this formulation should be between 3.00 to 7.  |
|  | 22 | Q. And likewise as another example, a pH of         |
|  |    |   |
|  |    |   |
|  |    |   |
|  |    |   |

| 1  | 3.04, which was one of the other values that came   |
|----|---|
| 2  |   |
|    | up, that too by the claims themselves would be a pH |
| 3  | of a formulation that would be suitable for nasal   |
| 4  | administration, right?                              |
| 5  | MS. EVERETT: Objection to form.                     |
| 6  | BY THE WITNESS:                                     |
| 7  | A. According to claim 45. I personally              |
| 8  | wouldn't formulate anything near pH 3 at all for    |
| 9  | nasal administration.                               |
| 10 | Q. But the '620 Patent certainly claims a           |
| 11 | formulation as low as 3, with a pH as low as 3?     |
| 12 | A. In claim 45 it does, yes.                        |
| 13 | Q. So by including in claim 45 the range            |
| 14 | the pH range of between 3 to 7 and making it depend |
| 15 | from claim 1, it's at least the case that the       |
| 16 | inventors of the '620 Patent thought that was an    |
| 17 | acceptable pH range for a suitable nasal spray,     |
| 18 | right?  |
| 19 | A. In 45 they say that pH from 3 to 7 would         |
| 20 | be a suitable formulation.                          |
| 21 | Q. So setting aside what you would do, the          |
| 22 | inventors at least believe that range to be         |
|    |   |
|    |   |
|    |   |
|    |   |

| 1  | suitable for a nasal spray, right?                  |
|----|---|
| 2  | A. It appears so. In 46 they narrow that            |
| 3  | range to 4.5 to 6.5, which would be more            |
| 4  | acceptable, but as                                  |
| 5  | Q. But both 45 and 46, both claims are              |
| 6  | present in the '620 Patent, right?                  |
| 7  | A. They both are, yes.                              |
| 8  | Q. And so a person of ordinary skill looking        |
| 9  | at the '620 Patent consistent with the inventors    |
| 10 | would have felt looking at claim 45 that a range    |
| 11 | that included as low as a pH of 3 would be suitable |
| 12 | as a formulation for nasal use?                     |
| 13 | MS. EVERETT: Objection to form.                     |
| 14 | BY THE WITNESS:                                     |
| 15 | A. I think a person of ordinary skill would         |
| 16 | be more in the mind of thinking that a pH range of  |
| 17 | what was more commonly cited in the textbooks and   |
| 18 | other resources, publications that show a pH in the |
| 19 | range of around 4 to 8 would be suitable. I'm not   |
| 20 | aware of any products that are formulated at pH 3   |
| 21 | or ever been approved. A person of ordinary skill   |
| 22 | would consider that, in my opinion, to be           |
|    |   |
|    |   |
|    |   |
|    |   |

| 1  | unacceptable.                                      |
|----|--|
| 2  | Q. But at least the inventors believed that        |
| 3  | range to be suitable, including the lower bound of |
| 4  | 3 for the pH such that the formulation would be    |
| 5  | suitable for nasal administration based on claim   |
| 6  | 45, right?   |
| 7  | MS. EVERETT: Objection to form.                    |
| 8  | BY THE WITNESS:                                    |
| 9  | A. On 45 they certainly claim pH 3 to 7. So        |
| 10 | they must have had some reason to include that     |
| 11 | range.   |
| 12 | Q. And at least one of those reasons would be      |
| 13 | that it would be acceptable and suitable for nasal |
| 14 | administration at a pH of 3, correct?              |
| 15 | A. Since it depends on claim 1, you know, it       |
| 16 | would have to be suitable. You know, there may be  |
| 17 | other reasons, you know, the chemical stability or |
| 18 | solubility may have been enhanced, but in my       |
| 19 | opinion something formulated at pH 3 is            |
| 20 | unacceptable for nasal administration.             |
| 21 | Q. I'd like to talk to you a little bit about      |
| 22 | solutions and suspensions and, again, we can       |
|    |  |
|    |  |
|    |  |
|    |  |

| 1  | continue our focus on the '620 Patent which I       |
|----|---|
| 2  | believe you still have in front of you.             |
| 3  | Earlier we had a brief discussion that in           |
| 4  | a general sense both claims independent claims 1    |
| 5  | and 24, which are the challenged independent claims |
| 6  | in this proceeding, are directed to a combination   |
| 7  | of azelastine with fluticasone, right, in the       |
| 8  | general sense?                                      |
| 9  | A. Generally speaking, with other limitations       |
| 10 | for sure.   |
| 11 | Q. And again, generally speaking, in that           |
| 12 | combination you would expect the azelastine to be   |
| 13 | dissolved to form a solution, correct?              |
| 14 | A. If it was in an aqueous environment you          |
| 15 | would anticipate the azelastine hydrochloride to be |
| 16 | predominantly in solution.                          |
| 17 | Q. Just so we're clear on solution versus           |
| 18 | suspension, a solution is a formulation where the   |
| 19 | ingredients are fully dissolved or at least mostly  |
| 20 | dissolved, correct?                                 |
| 21 | A. Yeah. An acceptable pharmaceutical               |
| 22 | solution would be one where the drug product is     |
|    |   |
|    |   |
|    |   |
|    |   |

| 1  | dissolved in a solvent.                             |
|----|---|
| 2  | Q. Into like an aqueous solution, water?            |
| 3  | A. That would be one example, yes.                  |
| 4  | Q. So with that understanding, the azelastine       |
| 5  | would be the solution formulation of the            |
| 6  | combination for what's claimed in claims 1 and 24,  |
| 7  | right, in a general sense?                          |
| 8  | A. Yeah. In an aqueous solution azelastine          |
| 9  | hydrochloride would be the drug which would be in   |
| 10 | solution.   |
| 11 | Q. And then moving on to the fluticasone, in        |
| 12 | the combination of the independent claims 1 and 24  |
| 13 | it mostly would not be dissolved such that it forms |
| 14 | a suspension, right?                                |
| 15 | MS. EVERETT: Objection to form.                     |
| 16 | BY THE WITNESS:                                     |
| 17 | A. An example of an aqueous pharmaceutical          |
| 18 | formulation, fluticasone proprionate without the    |
| 19 | use of, you know, solubilizers or other cosolvents  |
| 20 | would most likely be in a suspension form.          |
| 21 | Q. And "in suspension form" means a                 |
| 22 | formulation with particular ingredients that aren't |
|    |   |
|    |   |
|    |   |
|    |   |

| 1  | fully dissolved; is that a fair characterization?   |
|----|---|
| 2  | A. A suspension would be a pharmaceutical           |
| 3  | suspension would be one where the drug particles    |
| 4  | are in solid form dispersed within a liquid medium  |
| 5  | and not dissolved.                                  |
| 6  | Q. So in the case of the combination that's         |
| 7  | claimed in independent claims 1 and 24, the         |
| 8  | fluticasone would be the suspension formulation or  |
| 9  | the suspension portion of the formulation, right?   |
| 10 | A. In an aqueous formulation it's highly            |
| 11 | likely that the fluticasone proprionate is going to |
| 12 | be a solid particle in that environment creating a  |
| 13 | suspension or at least being a solid particle in a  |
| 14 | liquid.   |
| 15 | Q. So with that understanding of the                |
| 16 | discussion we've had about the azelastine and       |
| 17 | fluticasone components of what's claimed in claims  |
| 18 | 1 and 24, would it be correct to refer to either of |
| 19 | those formulations as a solution-suspension?        |
| 20 | A. So the question said either of those             |
| 21 | formulations?                                       |
| 22 | Q. I'm sorry. So we've been discussing the          |
|    |   |
|    |   |
|    |   |
|    | Our new Educada IIO I Wendahida Orant Descution     |

| 1  | combination that's claimed by both independent      |
|----|---|
| 2  | claims 1 and 24 which is generally a combination of |
| 3  | azelastine and fluticasone, right?                  |
| 4  | A. Those two drugs are listed in those              |
| 5  | claims, yes.  |
| 6  | Q. Right. And then in an aqueous formulation        |
| 7  | the azelastine, as we discussed, would generally be |
| 8  | in solution form, correct?                          |
| 9  | A. Most likely, yes.                                |
| 10 | Q. And then correspondingly the fluticasone         |
| 11 | aspect of the formulation would generally be in     |
| 12 | suspension form?                                    |
| 13 | A. Okay. Yes.                                       |
| 14 | Q. In the aqueous pharmaceutical formulation,       |
| 15 | right?  |
| 16 | A. Correct.   |
| 17 | Q. Okay. With that understanding, would it          |
| 18 | be appropriate to refer to the azelastine and       |
| 19 | fluticasone formulation in aqueous pharmaceutical   |
| 20 | formulation as a solution-suspension?               |
| 21 | A. It would be a solution of azelastine and a       |
| 22 | suspension of fluticasone most likely in that case. |
|    |   |
|    |   |
|    |   |
|    |   |

| 1  | Q. So what's claimed in claims 1 and 24 would      |
|----|--|
| 2  | be considered an aqueous solution-suspension,      |
| 3  | right, with those two different active ingredient  |
| 4  | components; is that a fair characterization?       |
| 5  | A. I like the term a solution-suspension           |
| 6  | because that accurately determines what it is.     |
| 7  | There's other ways of characterizing it. It may be |
| 8  | that somebody just characterizes it as a           |
| 9  | suspension.  |
| 10 | Q. Because of the suspension part?                 |
| 11 | A. Just because that's the obvious visual          |
| 12 | you know, visually apparent nature of that         |
| 13 | formulation.                                       |
| 14 | Q. But you're comfortable with solution-           |
| 15 | suspension as you just testified?                  |
| 16 | A. Sure.   |
| 17 | Q. Okay. So the combination that's claimed         |
| 18 | in claims 1 and 24, it's not just a solution,      |
| 19 | right?   |
| 20 | A. Well, really all that claim 1 indicates is      |
| 21 | it's a pharmaceutical formulation that contains    |
| 22 | azelastine, a pharmaceutically acceptable salt,    |
|    |  |
|    |  |
|    |  |
|    |  |

| 1  | or and, sorry, a pharmaceutically acceptable       |
|----|--|
|    |  |
| 2  | ester of fluticasone wherein the pharmaceutical    |
| 3  | formulation is in a dosage form suitable for       |
| 4  | administration. It doesn't make any mention of,    |
| 5  | you know, aqueous environment, solution,           |
| 6  | suspension.  |
| 7  | Q. It also doesn't say nasal spray, right?         |
| 8  | A. Not in not explicitly in the claim, but         |
| 9  | in the file history those two terms, "suitable for |
| 10 | nasal administration" and "nasal spray," are       |
| 11 | equivalent.  |
| 12 | Q. Right, but as we've already discussed and       |
| 13 | you testified, you would understand in an aqueous  |
| 14 | pharmaceutical formulation that the azelastine     |
| 15 | would be in solution and the fluticasone would be  |
| 16 | in suspension, right?                              |
| 17 | A. Yes, in an aqueous environment.                 |
| 18 | Q. And then you said also that you're              |
| 19 | comfortable saying that that would be a solution-  |
| 20 | suspension formulation, right?                     |
| 21 | A. That's right.                                   |
| 22 | Q. Okay. And such a solution-suspension            |
|    |  |
|    |  |
|    |  |
|    |  |
|    | GregoryEdwards, LLC   Worldwide Court Reporting    |

| 1  | formulation wouldn't be considered just a solution, |
|----|---|
| 2  | right?  |
| 3  | A. A solution formulation that also had a           |
| 4  | drug suspended would not be appropriately           |
| 5  | characterized as just a solution.                   |
| 6  | Q. Thank you for clarifying. I just wanted          |
| 7  | to make sure that was clear.                        |
| 8  | MR. CHESLOCK: I think I've been going               |
| 9  | about an hour again. Do you want to take a break?   |
| 10 | MS. EVERETT: Sure.                                  |
| 11 | (A short break was had.)                            |
| 12 | BY MR. CHESLOCK:                                    |
| 13 | Q. Welcome back, Dr. Smyth. During the break        |
| 14 | that we just had did you discuss the substance of   |
| 15 | your deposition testimony with your counsel?        |
| 16 | A. No.  |
| 17 | Q. As we were just discussing, you would not        |
| 18 | consider the combination of azelastine and          |
| 19 | fluticasone as just a solution, right?              |
| 20 | A. If one of those ingredients was in there         |
| 21 | as a solid particulate form, then it would be not   |
| 22 | just a solution.                                    |
|    |   |
|    |   |
|    |   |
|    |   |

#### 1 Q. Do you have your second declaration there 2 in front of you? 3 Α. Yes, I do. Can you go to page 35. Are you there? 4 Q. 5 Α. Yes. Q. Then I'd actually like to -- that's where 6 7 paragraph 56 begins. I'd like to go to the next 8 page where paragraph 56 continues. 9 A. Okay. And do you see the third sentence on that 10 Q. 11 page that starts with "Beyond"; do you see that? 12 It would be the second full sentence on that page. "Beyond their use," that sentence? 13 Α. Sure. 14 Q. Yeah. Do you see where in your 15 declaration it says "Allen discloses a preference in the art for using dextrose and sodium chloride 16 as isotonic agents in nasal spray formulations"? 17 18 Α. I see that. 19 And Allen is a reference to one of the Q. 20 references that you relied upon in forming your 21 opinion, right? 22 Α. That's right. It's Exhibit 2112, "The

| 1  | Art, Science, and Technology of Pharmaceutical      |
|----|---|
| 2  | Compounding."                                       |
| 3  | Q. Dr. Smyth, I will now hand to you what was       |
| 4  | previously designated as Patent Owner's             |
| 5  | Exhibit 2112. Do you recognize Patent Owner's       |
| 6  | Exhibit 2112?                                       |
| 7  | A. Yes.   |
| 8  | Q. And is that the same exhibit that's              |
| 9  | referenced in the portion of paragraph 56 of your   |
| 10 | second declaration that we read earlier?            |
| 11 | A. I believe it is, yes.                            |
| 12 | Q. If you could, please, in Patent Owner's          |
| 13 | Exhibit 2112 go to page 19. Do you see the label    |
| 14 | "Tonicity Adjustment"?                              |
| 15 | A. I see that.                                      |
| 16 | Q. And before we get there can you look back        |
| 17 | again at your declaration, please. So just to       |
| 18 | clarify, what you're saying in this portion of      |
| 19 | paragraph 56 that we looked at, it's your opinion   |
| 20 | that dextrose and sodium chloride are the preferred |
| 21 | isotonic agents for nasal formulations generally,   |
| 22 | right?  |
|    |   |
|    |   |
|    |   |
|    |   |

|    |   | Fage |
|----|---|------|
| 1  | A. So Allen discloses in that first sentence        |      |
| 2  | after the label "Tonicity adjustment," "The         |      |
| 3  | preferred agents for adjusting the tonicity of      |      |
| 4  | nasal solutions are sodium chloride and dextrose."  |      |
| 5  | Q. Right. But your opinion as stated in             |      |
| 6  | paragraph 56 focuses on nasal spray formulations    |      |
| 7  | generally, correct?                                 |      |
| 8  | A. It does, yeah, nasal spray formulations.         |      |
| 9  | Q. And you would agree with me that there's a       |      |
| 10 | distinction between nasal spray formulations that   |      |
| 11 | are just solutions and nasal spray formulations     |      |
| 12 | that are suspensions? You would agree they're       |      |
| 13 | different things?                                   |      |
| 14 | A. A solution is a different type of                |      |
| 15 | formulation than a suspension.                      |      |
| 16 | Q. So the corollary to that would be the            |      |
| 17 | statement that you highlighted from Patent Owner's  |      |
| 18 | Exhibit 2112 that's specific to nasal solutions and |      |
| 19 | in particular that sodium chloride and dextrose are |      |
| 20 | preferred agents for such solutions can't support a |      |
| 21 | broader understanding of them being preferred for   |      |
| 22 | nasal spray formulations generally, right?          |      |
|    |   |      |
|    |   |      |
|    |   |      |
| L  |   |      |

Г

| 1  | A. No, I disagree with that. I think                |
|----|---|
| 2  | basically under the broader title "Physicochemical  |
| 3  | Considerations," those characteristics that are     |
| 4  | listed under that, pH and buffering, tonicity,      |
| 5  | sterility, antioxidants, for example, those apply   |
| 6  | for nasal preparations in general.                  |
| 7  | Q. But you would agree with me that the             |
| 8  | statement on page 19 of Patent Owner's Exhibit 2112 |
| 9  | is specific to nasal solutions, right?              |
| 10 | A. It would be specific to nasal preparations       |
| 11 | that contain a solution component or would be       |
| 12 | applying an aqueous liquid to the nasal passages.   |
| 13 | Q. But there's no mention in this statement         |
| 14 | that we see here on page 19 that you've identified  |
| 15 | regarding suspensions, correct?                     |
| 16 | A. A person of ordinary skill would read this       |
| 17 | as the general physicochemical considerations that  |
| 18 | would apply both to solutions and suspensions being |
| 19 | applied to the nasal cavity. I don't see the word   |
| 20 | suspension in there, but a person of ordinary skill |
| 21 | would obviously know that tonicity adjustment is    |
| 22 | important in both.                                  |
|    |   |
|    |   |
|    |   |
|    |   |

| 1  | It goes on to say "Nasal fluid has a                |
|----|---|
| 2  | isotonicity value similar to a .9 percent sodium    |
| 3  | chloride." Then it says "If the isotonicity is      |
| 4  | beyond the proper range" and it talks about "nasal  |
| 5  | ciliary movement." That would apply equally to      |
| 6  | solutions and suspensions.                          |
| 7  | Q. I appreciate those additional statements,        |
| 8  | but suffice it to say and this is a yes-or-no       |
| 9  | question in that sentence that you've identified    |
| 10 | in Patent Owner's Exhibit 2112 there's no mention   |
| 11 | of suspension, it only uses the word solution,      |
| 12 | correct?  |
| 13 | A. That first sentence says "tonicity of            |
| 14 | nasal solutions" and in a suspension you would have |
| 15 | a solution component. So, you know, that would      |
| 16 | equally apply to suspensions and solutions.         |
| 17 | Q. Again, this is a yes-or-no question and          |
| 18 | l've given you a lot of opportunities to give long  |
| 19 | narrative answers. With respect to this specific    |
| 20 | sentence on page 19, it uses the word solutions and |
| 21 | the word suspension or suspensions is not used,     |
| 22 | correct? Yes or no.                                 |
|    |   |
|    |   |
| 1  |   |

| 1  | A. I used this reference because it talks           |
|----|---|
| 2  | about solutions and suspensions in this chapter and |
| 3  | then it talks about physicochemical considerations  |
| 4  | of both of those in this list here on page 19.      |
| 5  | Q. So yes or no, it uses the word solutions         |
| 6  | and not suspension or suspensions in that sentence? |
| 7  | Yes or no.  |
| 8  | MS. EVERETT: Objection to form.                     |
| 9  | MR. CHESLOCK: It's a yes-or-no question.            |
| 10 | BY THE WITNESS:                                     |
| 11 | A. The word suspension is not in there, but,        |
| 12 | you know, a POSA would know that it applies to      |
| 13 | suspensions as well.                                |
| 14 | Q. And it's certainly accurate based on some        |
| 15 | of the preceding pages that the author of Patent    |
| 16 | Owner's Exhibit 2112 used the words solution and    |
| 17 | suspension separately, correct?                     |
| 18 | MS. EVERETT: Objection to form.                     |
| 19 | BY MR. CHESLOCK:                                    |
| 20 | Q. I'll draw your attention it's a very             |
| 21 | simple question. So page 17 says "Preparation of    |
| 22 | Nasal Products, Solutions," right, at the bottom?   |
|    |   |
|    |   |
|    |   |
|    | CrossryEdwards LLC Warldwide Court Paparting        |

Page 93 1 A. l'm sorry. Where? 2 Q. So page 17 says "Preparation of Nasal 3 Products"? A. Yes. 4 And then it says "Solutions." You agree 5 Q. with me on that, right? 6 7 A. It has a list of steps for solutions. Right. And then on page 18 it separately 8 Q. 9 lists a set of two different methods for the 10 formulations of suspensions, right? 11 MS. EVERETT: Objection to form. 12 MR. CHESLOCK: That's a yes-or-no 13 question. 14 BY THE WITNESS: 15 So it says "Suspensions" -- "Preparation Α. of Nasal Products, " continues "Suspensions (Method 16 1), "Suspensions (Method 2)" on page 18. 17 18 Q. So it's clear that the authors of Patent 19 Owner's Exhibit 2112 knew and understood there's a 20 difference between solutions and suspensions and they used those words differently in the text? 21 22 That's either true or false, right?

| 1  | MS. EVERETT: Objection, form.                      |
|----|--|
| 2  | BY THE WITNESS:                                    |
| 3  | A. Certainly the authors would have known          |
| 4  | that solutions and suspensions are different types |
| 5  | of formulations.                                   |
| 6  | Q. I'd like to draw your attention to Bates-       |
| 7  | labeled page 3 of Patent Owner's Exhibit 2112,     |
| 8  | please. Do you see the heading "Definitions/       |
| 9  | Types"?  |
| 10 | A. Yes.  |
| 11 | Q. Do you see there's a definition for             |
| 12 | "Ophthalmic solutions"?                            |
| 13 | A. I see "Ophthalmic solutions are sterile,        |
| 14 | free from foreign particles, and prepared          |
| 15 | especially for installation into the eye."         |
| 16 | Q. Do you see also see there's a separate          |
| 17 | definition for ophthalmic suspensions in the same  |
| 18 | paragraph, right?                                  |
| 19 | A. I see that, yes.                                |
| 20 | Q. And so, again, doesn't the fact that            |
| 21 | Patent Owner's Exhibit 2112 provides two different |
| 22 | definitions of suspensions and solutions indicate  |
|    |  |
|    |  |
|    |  |
|    | GregoryEdwards IIC   Worldwide Court Reporting     |

| 1  | that a person of ordinary skill when reading Patent |
|----|---|
| 2  | Owner's Exhibit 2112 would consider those two to be |
| 3  | different?  |
| 4  | A. I don't think so because essentially if          |
| 5  | you look at, for example, on page 18 of that        |
| 6  | reference where it talks about the preparation of   |
| 7  | nasal products, suspensions, in both of those       |
| 8  | examples they say "Take a sample of the suspension  |
| 9  | and determine the pH and other quality control      |
| 10 | factors," which would be those physicochemical      |
| 11 | considerations that are listed on page 19.          |
| 12 | Q. Okay. So let's look back at page 17 of           |
| 13 | Patent Owner's Exhibit 2112. Do you see at the top  |
| 14 | underneath "Nasal Preparations" there's a section   |
| 15 | called "Definitions"?                               |
| 16 | A. Yes.   |
| 17 | Q. Okay. And do you see that there's a nasal        |
| 18 | solutions definition of "Nasal solutions are        |
| 19 | solutions prepared for nasal administration either  |
| 20 | as drops or as sprays"?                             |
| 21 | A. I see that.                                      |
| 22 | Q. And then similarly there's a separate and        |
|    |   |
|    |   |
|    |   |
|    |   |

|    |   | uge / |
|----|---|-------|
| 1  | distinct definition of "Nasal suspensions are       |       |
| 2  | liquid preparations containing insoluble materials  |       |
| 3  | for nasal administration"; do you see that?         |       |
| 4  | A. Yes.   |       |
| 5  | Q. And you would agree with me that in this         |       |
| 6  | Patent Owner's Exhibit 2112 there are two separate  |       |
| 7  | definitions that are satisfied separately for       |       |
| 8  | solutions and suspensions, yes or no?               |       |
| 9  | MS. EVERETT: Objection to form.                     |       |
| 10 | BY THE WITNESS:                                     |       |
| 11 | A. They define nasal solutions and nasal            |       |
| 12 | suspensions separately, yes.                        |       |
| 13 | Q. So a corollary to that would be in the           |       |
| 14 | text of Patent Owner's Exhibit 2112 when they meant |       |
| 15 | to emote that something was applicable to solutions |       |
| 16 | or suspensions they actually used those terms, yes  |       |
| 17 | or no?  |       |
| 18 | A. A person of ordinary skill would know that       |       |
| 19 | tonicity adjustment is important for anything       |       |
| 20 | that's applied to the nose whether it's a solution  |       |
| 21 | or suspension. So the fact that they put nasal      |       |
| 22 | solutions in there, a person of ordinary skill      |       |
|    |   |       |
|    |   |       |
|    |   |       |
| L  |   |       |

000096

| 1  | would also know that that also applies to nasal    |
|----|--|
| 2  | suspensions and would be important.                |
| 3  | Q. You didn't consider the fact that Patent        |
| 4  | Owner's Exhibit 2112 included these separate       |
| 5  | definitions for nasal solutions and nasal          |
| 6  | suspensions when you formed your conclusion as to  |
| 7  | what's stated on paragraph 19, right?              |
| 8  | MS. EVERETT: Objection to form.                    |
| 9  | BY THE WITNESS:                                    |
| 10 | A. I understand there's a difference between       |
| 11 | nasal solutions and suspensions and that one       |
| 12 | contains solid particles, the other one doesn't,   |
| 13 | but I also understand that if you're formulating   |
| 14 | something for nasal delivery you have to take into |
| 15 | account the osmolarity, the tonicity.              |
| 16 | Q. To answer my question and it's a yes or         |
| 17 | no answer you didn't consider the fact that as     |
| 18 | shown here on page 17 Patent Owner's Exhibit 2112  |
| 19 | explicitly has two separate definitions for        |
| 20 | solutions and suspensions when you formed your     |
| 21 | opinions as to what is stated with respect to      |
| 22 | tonicity agents on page 19? You did not consider   |
|    |  |
|    |  |
|    |  |
|    |  |

Physical stability is particularly</li> <li>important in suspension-based formulations. So if</li> </ul>   | 10 | A. Sure.  |
| <ul> <li>formulating a nasally-administered drug?</li> <li>A. Stability including physical stability is</li> <li>a really important characteristic of a formulation.</li> <li>Q. And that would be true of a solution-</li> <li>suspension nasally-administered drug such as the</li> <li>azelastine-fluticasone combination that we've been</li> <li>discussing earlier?</li> <li>A. Physical stability is particularly</li> <li>important in suspension-based formulations. So if</li> </ul>  | 11 | Q. Is physical stability another parameter          |
| <ul> <li>A. Stability including physical stability is</li> <li>a really important characteristic of a formulation.</li> <li>Q. And that would be true of a solution-</li> <li>suspension nasally-administered drug such as the</li> <li>azelastine-fluticasone combination that we've been</li> <li>discussing earlier?</li> <li>A. Physical stability is particularly</li> <li>important in suspension-based formulations. So if</li> </ul>  | 12 | that a person of ordinary skill would consider when |
| <ul> <li>15 a really important characteristic of a formulation.</li> <li>Q. And that would be true of a solution-</li> <li>17 suspension nasally-administered drug such as the</li> <li>18 azelastine-fluticasone combination that we've been</li> <li>19 discussing earlier?</li> <li>20 A. Physical stability is particularly</li> <li>21 important in suspension-based formulations. So if</li> </ul>  | 13 | formulating a nasally-administered drug?            |
| <ul> <li>Q. And that would be true of a solution-</li> <li>suspension nasally-administered drug such as the</li> <li>azelastine-fluticasone combination that we've been</li> <li>discussing earlier?</li> <li>A. Physical stability is particularly</li> <li>important in suspension-based formulations. So if</li> </ul>   | 14 | A. Stability including physical stability is        |
| <ul> <li>17 suspension nasally-administered drug such as the</li> <li>18 azelastine-fluticasone combination that we've been</li> <li>19 discussing earlier?</li> <li>20 A. Physical stability is particularly</li> <li>21 important in suspension-based formulations. So if</li> </ul>  | 15 | a really important characteristic of a formulation. |
| <ul> <li>18 azelastine-fluticasone combination that we've been</li> <li>19 discussing earlier?</li> <li>20 A. Physical stability is particularly</li> <li>21 important in suspension-based formulations. So if</li> </ul>   | 16 | Q. And that would be true of a solution-            |
| <ul> <li>19 discussing earlier?</li> <li>20 A. Physical stability is particularly</li> <li>21 important in suspension-based formulations. So if</li> </ul>  | 17 | suspension nasally-administered drug such as the    |
| <ul> <li>A. Physical stability is particularly</li> <li>important in suspension-based formulations. So if</li> </ul>  | 18 | azelastine-fluticasone combination that we've been  |
| 21 important in suspension-based formulations. So if  | 19 | discussing earlier?                                 |
|   | 20 | A. Physical stability is particularly               |
| 22 you have a suspended particle, then physical   | 21 | important in suspension-based formulations. So if   |
|   | 22 | you have a suspended particle, then physical        |
|   |    |   |
|   | l  |   |
|   |    |   |
|   |    |   |

|    |  | Tage |
|----|--|------|
| 1  | stability would definitely need to be considered.  |      |
| 2  | Q. And one of the ways that a person of            |      |
| 3  | ordinary skill can make adjustments to physical    |      |
| 4  | stability is with thickening agents, right?        |      |
| 5  | A. Potentially they can use thickening             |      |
| 6  | agents, suspending agents.                         |      |
| 7  | Q. Just to clarify, do you consider the terms      |      |
| 8  | "thickening agents" and "suspending agents" to be  |      |
| 9  | mostly interchangeable?                            |      |
| 10 | MS. EVERETT: Objection to form.                    |      |
| 11 | BY THE WITNESS:                                    |      |
| 12 | A. Not exactly. Suspending could also              |      |
| 13 | include agents used to change the sort of          |      |
| 14 | electrical properties of the of the suspension     |      |
| 15 | such that there's no aggregation or agglomeration. |      |
| 16 | Suspending agents may be a little bit broader.     |      |
| 17 | Q. Okay. Let's just for now stick with             |      |
| 18 | thickening agents for now. So I think consistent   |      |
| 19 | with what you've just explained in terms of the    |      |
| 20 | importance with respect to the suspension piece of |      |
| 21 | a formulation, would it be accurate to say that    |      |
| 22 | thickening agents in general help with the         |      |
|    |  |      |
|    |  |      |
|    |  |      |
|    |  |      |

| 1  | dispersion of ingredients that are not fully        |
|----|---|
| 2  | dissolved; would that be correct?                   |
| 3  | A. It helps maintain a thickening agent             |
| 4  | may slow the sedimentation rate of particles that   |
| 5  | are dispersed in a liquid medium.                   |
| 6  | Q. Okay. So another way of stating that is          |
| 7  | they help prevent certain undissolved ingredients   |
| 8  | from settling to the bottom of a container, for     |
| 9  | example?  |
| 10 | A. They can reduce the time                         |
| 11 | Q. Reduce the time.                                 |
| 12 | A Sorry, increase the time for those                |
| 13 | particles to stay suspended.                        |
| 14 | Q. So if you take a container that is a             |
| 15 | suspension, the thickening agents increase the time |
| 16 | at which the nondissolved ingredients would settle  |
| 17 | to the bottom of a container, for example?          |
| 18 | A. That's one essentially way of increasing         |
| 19 | the time for settling is to increase the viscosity  |
| 20 | by using thickening agents.                         |
| 21 | Q. And those thickening agents also assist in       |
| 22 | allowing the nondissolved ingredients to be         |
|    |   |
|    |   |
|    |   |
|    | GregoryEdwards IIC   Worldwide Court Reporting      |

| 1  | redispersed upon shaking a container with that      |
|----|---|
| 2  | particular suspension formulation in the container, |
| 3  | right?  |
| 4  | A. No. They actually work in the opposite.          |
| 5  | They often prevent the redispersion of those        |
| 6  | agents. So it's kind of a balance between           |
| 7  | sedimentation rate and the ability to impart enough |
| 8  | sheer forces within the suspension to disperse      |
| 9  | redisperse the particles.                           |
| 10 | Q. So it's a balance between those two              |
| 11 | different characteristics, that the thickening      |
| 12 | agents can balance the ability or limit the ability |
| 13 | over time for the ingredients to settle and also    |
| 14 | allow those ingredients to be redispersed by        |
| 15 | applying sheer force; is that accurate.             |
| 16 | A. If you're just using a thickening agent to       |
| 17 | provide physical stability it's a very fine balance |
| 18 | between being too viscous so that you can't         |
| 19 | redisperse any sediment particles and being not     |
| 20 | viscous enough such that particles sediment too     |
| 21 | quickly.  |
| 22 | Q. I understand. In general use of                  |
|    |   |
|    |   |
|    |   |
|    |   |

| 1  | thickening agents to control let me ask you this    |
|----|---|
| 2  | first. Viscosity is a parameter that a thickening   |
| 3  | agent affects, right?                               |
| 4  | A. A thickening agent changes viscosity or          |
| 5  | and rheology.                                       |
| 6  | Q. And when you say "rheology," I think             |
| 7  | you're referring to a fluid's general reaction to   |
| 8  | application of sheer; is that a fair                |
| 9  | characterization?                                   |
| 10 | A. Right. Viscosity is just one element of          |
| 11 | the rheology of a formulation.                      |
| 12 | Q. And so use of thickening agents to control       |
| 13 | viscosity was well known in the prior art before    |
| 14 | the '620 Patent for pharmaceutical formulations,    |
| 15 | right?  |
| 16 | A. Certainly there's a number of thickening         |
| 17 | agents, polymers that had been used to change       |
| 18 | viscosity in a variety of different dosage forms in |
| 19 | the prior art.                                      |
| 20 | Q. So in formulating a nasally-administered         |
| 21 | drug before the '620 Patent, including any          |
| 22 | solution-suspension formulations, it was well       |
|    |   |
|    |   |
|    |   |
|    |   |

| Page | 103 |
|------|-----|
| Iago | 100 |

| 1  | within the knowledge of a person of ordinary skill  |
|----|---|
| 2  | to use thickening agents to arrive at a formulation |
| 3  | with a suitable physical stability as we've been    |
| 4  | discussing, right?                                  |
| 5  | A. First of all, I'm not aware of any               |
| 6  | solution-suspension nasal sprays prior to the '620, |
| 7  | and then, you know, as we talked about earlier, the |
| 8  | viscosity and the rhelogical properties are sort of |
| 9  | a fine balance. One can adjust it, but one may not  |
| 10 | find an optimal value or viscosity or rheology for  |
| 11 | a particular formulation.                           |
| 12 | Q. So let's set aside the solution-suspension       |
| 13 | formulations and let's just ask this. The           |
| 14 | '620 Patent certainly wasn't the first time that    |
| 15 | somebody disclosed a physically stable homogeneous  |
| 16 | drug suspension, right? That's a yes or no answer.  |
| 17 | A. So physical stability you're always              |
| 18 | nothing is always completely physically stable,     |
| 19 | you'll always have some degree of sedimentation,    |
| 20 | but for a particular for a pharmaceutical use       |
| 21 | there have been formulations formulated that had    |
| 22 | appropriate physical stability for suspensions.     |
|    |   |
|    |   |

| 1  | Q. As an example, Flonase itself was a drug        |
|----|--|
| 2  | that came before the '620 Patent that was a        |
| 3  | physically stable nasal drug suspension, right?    |
| 4  | A. Flonase had adequate physical stability to      |
| 5  | suspend fluticasone particles in that formulation. |
| 6  | Q. And certain thickening agents were used to      |
| 7  | effect that physical stability in Flonase, right?  |
| 8  | A. Yeah. I would call them suspending agents       |
| 9  | in that case.                                      |
| 10 | Q. The broader category?                           |
| 11 | A. Yes.  |
| 12 | Q. Than we talked about before?                    |
| 13 | A. Yes.  |
| 14 | Q. Now, you mentioned that you're unaware of       |
| 15 | any solution-suspension formulations in your       |
| 16 | understanding that are nasally-administered drugs  |
| 17 | that existed before the '620 Patent; is that your  |
| 18 | testimony?   |
| 19 | A. That were pharmaceutically acceptable and       |
| 20 | suitable for administration to the nasal passages. |
| 21 | Q. We also just talked about Flonase; do you       |
| 22 | remember that?                                     |
|    |  |
|    |  |
|    |  |
| _  |  |

ſ

| 1  | A. Yes.  |
|----|--|
| 2  | Q. Isn't it true that even in Flonase there        |
| 3  | must have been something dissolved into solution,  |
| 4  | right?   |
| 5  | A. There could be some excipients, inactive        |
| 6  | ingredients that were dissolved in that            |
| 7  | formulation.                                       |
| 8  | Q. And in that circumstance it could be            |
| 9  | considered a solution-suspension if you're focused |
| 10 | on excipients other than active ingredients for    |
| 11 | Flonase?   |
| 12 | A. Not by my definition. So the excipients         |
| 13 | are selected around a active pharmaceutical        |
| 14 | ingredient. So when we talked earlier about        |
| 15 | solution-suspension systems, we were talking about |
| 16 | the active ingredients being in solution and       |
| 17 | suspension. So, you know, the difficulty there is  |
| 18 | where you have excipients that are required for a  |
| 19 | suspension and then you have to have certain other |
| 20 | excipients required for a solution. So that's, you |
| 21 | know, what we were talking about earlier.          |
| 22 | Q. So setting aside your definition, if we         |
|    |  |
|    |  |
|    |  |
|    |  |

|    |   | Tage |
|----|---|------|
| 1  | just focus on the excipients and those being in     |      |
| 2  | solution in the Flonase product, one could consider |      |
| 3  | that to be a solution-suspension in the broadest    |      |
| 4  | sense, correct?                                     |      |
| 5  | MS. EVERETT: Objection to form.                     |      |
| 6  | BY MR. CHESLOCK:                                    |      |
| 7  | Q. Focusing only, again, on the excipient and       |      |
| 8  | the active ingredient, one in solution, one in      |      |
| 9  | suspension.   |      |
| 10 | MS. EVERETT: Objection to form.                     |      |
| 11 | BY THE WITNESS:                                     |      |
| 12 | A. If you wanted to consider just Flonase by        |      |
| 13 | itself, right, with no other active ingredients in  |      |
| 14 | there, you would have fluticasone in suspension and |      |
| 15 | then some other components like carboxymethyl       |      |
| 16 | cellulose, for example, would be considered, you    |      |
| 17 | know, partially solubilized in that formulation.    |      |
| 18 | Q. Okay. Thank you.                                 |      |
| 19 | As kind of a follow-on to that, setting             |      |
| 20 | aside your understanding of nasally-administered    |      |
| 21 | drugs, the '620 Patent was not the first time       |      |
| 22 | anyone had ever developed a solution-suspension     |      |
|    |   |      |
|    |   |      |
|    |   |      |
|    |   |      |

| 1  | drug combination, right? Those had been in          |
|----|---|
| 2  | existence well before the '620 Patent?              |
| 3  | A. Setting aside nasal sprays, did you say?         |
| 4  | Q. Yeah. So the question is the '620 Patent         |
| 5  | wasn't the first time that anyone had ever          |
| 6  | developed a solution-suspension drug with active    |
| 7  | ingredients, right? Not the first time?             |
| 8  | A. Right. I'm aware of certain oral syrups,         |
| 9  | for example, available over-the-counter that        |
| 10 | contained an active in a solution, maybe an active  |
| 11 | in a suspension.                                    |
| 12 | Q. In the most general sense with respect to        |
| 13 | the examples you just gave, the concepts are        |
| 14 | similar between the examples that you gave and a    |
| 15 | nasally-administered drug because what one of skill |
| 16 | in the art wants to do is develop a formulation     |
| 17 | where the suspension stays relatively homogeneous   |
| 18 | over time; isn't that right?                        |
| 19 | MS. EVERETT: Objection to form.                     |
| 20 | BY THE WITNESS:                                     |
| 21 | A. No. They're quite different types of             |
| 22 | dosage forms. So the formulation requirements for   |
|    |   |
|    |   |
|    |   |
|    | GregorvEdwards. LLC   Worldwide Court Reporting     |

| 1  | those are very, very different. Nasal sprays have   |
|----|---|
| 2  | a much narrower sort of design requirements as we   |
| 3  | talked about earlier. So the types of excipients,   |
| 4  | the types of viscosity that you can use for a nasal |
| 5  | spray are going to be very different than those you |
| 6  | can use for an oral syrup, for example.             |
| 7  | Q. But the use of the thickening agents to          |
| 8  | achieve an appropriate viscosity and the general    |
| 9  | goal of trying to make the pharmaceutical           |
| 10 | formulation homogeneous, setting aside all the      |
| 11 | other factors, that was a similar concept, right?   |
| 12 | A. You can't really set aside the other             |
| 13 | factors. Like for sprayability that we talked       |
| 14 | about earlier there's a certain viscosity that you  |
| 15 | need to be able to spray a formulation. So, you     |
| 16 | know, you can't really set that aside and just      |
| 17 | focus in on viscosity. Some of that was             |
| 18 | illustrated in the testing that was done in the     |
| 19 | Apotex case.  |
| 20 | Q. But the desire to have homogeneous               |
| 21 | pharmaceutical formulations in the examples that    |
| 22 | you gave for cough syrup and the desire for having  |
|    |   |
|    |   |
|    |   |
| 1  |   |
| 1  | homogeneous formulations for a nasal spray, that   |
|----|--|
| 2  | desire is the same?                                |
| 3  | A. Right. A pharmaceutical product has to be       |
| 4  | uniform. Otherwise the dose administered is not    |
| 5  | going to be accurate. So you have to ensure        |
| 6  | homogeneity.                                       |
| 7  | Q. So the homogeneity is important because,        |
| 8  | as you just testified, it will accurately measure  |
| 9  | over time the dose that's actually administered    |
| 10 | when someone's using the product?                  |
| 11 | A. Those are slightly different words, but         |
| 12 | the concept is that you need a homogeneous product |
| 13 | to dispense a known and reproducible dose.         |
| 14 | Q. So the need for a homogeneous product that      |
| 15 | will dispense, in your words, a known and          |
| 16 | reproducible dose, that's not unique to nasal      |
| 17 | sprays, correct? That's unique that's not          |
| 18 | unique to nasal sprays. That's true of other       |
| 19 | pharmaceutical drug formulations, right?           |
| 20 | A. Most formulations are a unit dose where a       |
| 21 | certain specific dose is required to be            |
| 22 | administered for safety and efficacy.              |
|    |  |
|    |  |
|    |  |
|    |  |

000109

ſ

| 1  | Q. And by controlling for that homogeneity          |
|----|---|
| 2  | each time you take a dose the patient will be       |
| 3  | getting an accurate administration of an active     |
| 4  | ingredient?   |
| 5  | A. As much as possible the doses should be          |
| 6  | homogeneous.  |
| 7  | Q. Do you have your you still have your             |
| 8  | second declaration. If you could please go to       |
| 9  | paragraph 32 that starts on page 16. Then for this  |
| 10 | I'd also like if you could have access to the       |
| 11 | '620 Patent which I can see there on your left.     |
| 12 | So do you see in paragraph 32 where you             |
| 13 | have a quotation that comes from the patent that    |
| 14 | starts with "In examples where only the ingredients |
| 15 | of formulations according to the present invention  |
| 16 | are listed, these formulations are prepared by      |
| 17 | techniques well known in the art"? And the          |
| 18 | citation to that quote from the '620 Patent is on   |
| 19 | the next page to column 7, line 67 through column   |
| 20 | 8, line 2; do you see that?                         |
| 21 | A. I see that.                                      |
| 22 | Q. And do you see that corresponding quote in       |
|    |   |
|    |   |
|    |   |
| L  | GragoryEdwards IIC   Warldwide Court Paparting      |

ſ

| 1  | the '620 Patent?                                    |
|----|---|
| 2  | A. Yes, I see that.                                 |
| 3  | Q. Okay. Then looking further in your               |
| 4  | paragraph 32, you explain what a person of ordinary |
| 5  | skill would have understood from that sentence,     |
| 6  | correct?  |
| 7  | A. Yes. I said "A POSA would have viewed            |
| 8  | this sentence to be limited to the examples listed  |
| 9  | in the '620 Patent which set out the specific       |
| 10 | formulation ingredients and concentrations."        |
| 11 | Q. And following that statement you have a          |
| 12 | citation to the '620 Patent, column 8, line 1       |
| 13 | through column 11, line 43 in that paragraph 32,    |
| 14 | right?  |
| 15 | A. Column 8, line 1 to column 11, line 43,          |
| 16 | yes.  |
| 17 | Q. And if you look at the '620 Patent in            |
| 18 | those locations, there's a number of examples that  |
| 19 | are listed there with particular ingredients in     |
| 20 | each example, right?                                |
| 21 | A. Yes.   |
| 22 | Q. So based on the statements that you              |
|    |   |
|    |   |
|    |   |
|    |   |

| 1  | have and there's another statement in your          |
|----|---|
| 2  | declaration in the next line in paragraph 32 that   |
| 3  | reads "In that context the fact that these formulas |
| 4  | are prepared by techniques well known in the art    |
| 5  | makes sense because the examples already identify   |
| 6  | what and how much formulation ingredients to use";  |
| 7  | do you see that?                                    |
| 8  | A. Yes.   |
| 9  | Q. So what you're stating as your opinion in        |
| 10 | paragraph 32 is that the statement in the           |
| 11 | '620 Patent that these formulations are prepared by |
| 12 | techniques known in the art is limited only to the  |
| 13 | examples that are actually provided in the          |
| 14 | '620 Patent at the locations in column 8 through 11 |
| 15 | that you've cited in your declaration, right?       |
| 16 | A. So what I'm saying there is that the             |
| 17 | statement of you know, examples where only the      |
| 18 | ingredients of formulations according to the        |
| 19 | present invention are listed, these formulations    |
| 20 | are prepared by techniques well known in the art.   |
| 21 | So looking through column 8, line 3 through column  |
| 22 | 11, line 43, those are all the examples in the      |
|    |   |
|    |   |
|    |   |
|    |   |

| <ul> <li>'620 Patent. Some of those examples do not give</li> <li>instructions for the process of putting those</li> <li>ingredients together. So that's what that</li> <li>statement means, "prepared by techniques well known</li> <li>in the art."</li> <li>0. So just to clarify, what you're saying is</li> <li>the examples that are provided in the '620 Patent</li> <li>in column 8 through 11 that have particular</li> <li>ingredients but don't provide the techniques for</li> <li>actually formulating that formulation of those</li> <li>examples would be done by techniques well known in</li> <li>the art; is that correct?</li> <li>A. Not formulating them, but I guess</li> <li>processing them.</li> <li>0. Okay. So in order so your opinion is</li> <li>through 11, those specific examples would be</li> <li>processed and prepared by techniques that are well</li> <li>known in the art?</li> <li>A. Where the ingredients are given and the</li> <li>amounts are given, yes.</li> <li>Q. So as a corollary to that, I just want to</li> </ul> |
|--|
| <ul> <li>ingredients together. So that's what that</li> <li>statement means, "prepared by techniques well known</li> <li>in the art."</li> <li>Q. So just to clarify, what you're saying is</li> <li>the examples that are provided in the '620 Patent</li> <li>in column 8 through 11 that have particular</li> <li>ingredients but don't provide the techniques for</li> <li>actually formulating that formulation of those</li> <li>examples would be done by techniques well known in</li> <li>the art; is that correct?</li> <li>A. So in order so your opinion is</li> <li>that the examples that are listed in column 8</li> <li>through 11, those specific examples would be</li> <li>processed and prepared by techniques that are well</li> <li>known in the art?</li> <li>A. Where the ingredients are given and the</li> <li>amounts are given, yes.</li> </ul>   |
| <ul> <li>9 ingredients but don't provide the techniques for</li> <li>10 actually formulating that formulation of those</li> <li>11 examples would be done by techniques well known in</li> <li>12 the art; is that correct?</li> <li>13 A. Not formulating them, but I guess</li> <li>14 processing them.</li> <li>15 Q. Okay. So in order so your opinion is</li> <li>16 that the examples that are listed in column 8</li> <li>17 through 11, those specific examples would be</li> <li>18 processed and prepared by techniques that are well</li> <li>19 A. Where the ingredients are given and the</li> <li>20 A. Where the ingredients are given and the</li> </ul>   |
| <ul> <li>actually formulating that formulation of those</li> <li>examples would be done by techniques well known in</li> <li>the art; is that correct?</li> <li>A. Not formulating them, but I guess</li> <li>processing them.</li> <li>Q. Okay. So in order so your opinion is</li> <li>that the examples that are listed in column 8</li> <li>through 11, those specific examples would be</li> <li>processed and prepared by techniques that are well</li> <li>known in the art?</li> <li>A. Where the ingredients are given and the</li> <li>amounts are given, yes.</li> </ul>  |
| <ul> <li>examples would be done by techniques well known in</li> <li>the art; is that correct?</li> <li>A. Not formulating them, but I guess</li> <li>processing them.</li> <li>Q. Okay. So in order so your opinion is</li> <li>that the examples that are listed in column 8</li> <li>through 11, those specific examples would be</li> <li>processed and prepared by techniques that are well</li> <li>known in the art?</li> <li>A. Where the ingredients are given and the</li> <li>amounts are given, yes.</li> </ul>  |
| <ul> <li>the art; is that correct?</li> <li>A. Not formulating them, but I guess</li> <li>processing them.</li> <li>Q. Okay. So in order so your opinion is</li> <li>that the examples that are listed in column 8</li> <li>through 11, those specific examples would be</li> <li>processed and prepared by techniques that are well</li> <li>known in the art?</li> <li>A. Where the ingredients are given and the</li> <li>amounts are given, yes.</li> </ul>  |
| <ul> <li>A. Not formulating them, but I guess</li> <li>processing them.</li> <li>Q. Okay. So in order so your opinion is</li> <li>that the examples that are listed in column 8</li> <li>through 11, those specific examples would be</li> <li>processed and prepared by techniques that are well</li> <li>known in the art?</li> <li>A. Where the ingredients are given and the</li> <li>amounts are given, yes.</li> </ul>   |
| <ul> <li>processing them.</li> <li>Q. Okay. So in order so your opinion is</li> <li>that the examples that are listed in column 8</li> <li>through 11, those specific examples would be</li> <li>processed and prepared by techniques that are well</li> <li>known in the art?</li> <li>A. Where the ingredients are given and the</li> <li>amounts are given, yes.</li> </ul>   |
| 15Q. Okay. So in order so your opinion is16that the examples that are listed in column 817through 11, those specific examples would be18processed and prepared by techniques that are well19known in the art?20A. Where the ingredients are given and the21amounts are given, yes.   |
| <ul> <li>that the examples that are listed in column 8</li> <li>through 11, those specific examples would be</li> <li>processed and prepared by techniques that are well</li> <li>known in the art?</li> <li>A. Where the ingredients are given and the</li> <li>amounts are given, yes.</li> </ul>  |
| <ul> <li>through 11, those specific examples would be</li> <li>processed and prepared by techniques that are well</li> <li>known in the art?</li> <li>A. Where the ingredients are given and the</li> <li>amounts are given, yes.</li> </ul>   |
| <ul> <li>processed and prepared by techniques that are well</li> <li>known in the art?</li> <li>A. Where the ingredients are given and the</li> <li>amounts are given, yes.</li> </ul>   |
| <ul> <li>19 known in the art?</li> <li>20 A. Where the ingredients are given and the</li> <li>21 amounts are given, yes.</li> </ul>  |
| 20 A. Where the ingredients are given and the<br>21 amounts are given, yes.  |
| 21 amounts are given, yes.   |
|  |
| 22 Q. So as a corollary to that, I just want to  |
|  |
|  |
|  |
|  |
|  |

| 1  | make sure I understand your opinion, if there are   |
|----|---|
| 2  | any other formulations that include ingredients     |
| 3  | that differ from those examples specifically listed |
| 4  | in the '620 Patent, those must be formulated by     |
| 5  | techniques not known by a person skilled in the art |
| 6  | at the time?  |
| 7  | MS. EVERETT: Objection to form.                     |
| 8  | BY THE WITNESS:                                     |
| 9  | A. I think within the invention these               |
| 10 | compositions that have been identified can be       |
| 11 | prepared using techniques well known.               |
| 12 | Q. And so in your answer that you just gave         |
| 13 | where you refer to "these compositions," are you    |
| 14 | referring to the compositions that are specifically |
| 15 | listed in column 8 through column 11 of the         |
| 16 | '620 Patent?  |
| 17 | A. So these compositions can be prepared            |
| 18 | you know, where they haven't given you the process  |
| 19 | of putting, you know, the steps of how to add the   |
| 20 | ingredients together, they would be prepared by     |
| 21 | commonly known methods of adding and mixing those.  |
| 22 | Q. So my question is the corollary to that          |
|    |   |
|    |   |
|    |   |
|    | CrogoryEdwards IIC   Warldwide Court Paparting      |

| 1  | is the corollary to that opinion is if there are    |
|----|---|
| 2  | other compositions or formulations that include     |
| 3  | ingredients different from those in the examples    |
| 4  | that are specifically listed in the '620 Patent at  |
| 5  | column 8 through 11, must those be formulated by    |
| 6  | techniques that are not known by those skilled in   |
| 7  | the art at the time?                                |
| 8  | A. So I think we're using "formulated"              |
| 9  | slightly different. Here we're talking about in     |
| 10 | these statements the process the preparation        |
| 11 | techniques.   |
| 12 | Q. Okay, preparation techniques.                    |
| 13 | A. The mixing, the water addition, that kind        |
| 14 | of thing. Formulating is different. That's where    |
| 15 | you have to actually figure out the ingredients and |
| 16 | the amount, right.                                  |
| 17 | Q. Okay. We can use preparation technique.          |
| 18 | Is that better?                                     |
| 19 | A. Right. So within the scope of the                |
| 20 | examples and within the scope of the claims those   |
| 21 | formulations can be prepared, mixed, processed      |
| 22 | using techniques known in the art.                  |
|    |   |
|    |   |
|    |   |
|    |   |

Γ

| 1  | Q. Okay. So to clarify what you're saying,          |
|----|---|
| 2  | the examples that are given in column 8 through 11, |
| 3  | those can be prepared using preparation techniques  |
| 4  | that are well known in the art because it lists the |
| 5  | actual compositions of each example; is that right? |
| 6  | A. It lists the ingredients, yes.                   |
| 7  | Q. So my question is this. As a corollary to        |
| 8  | that opinion that the statement in column 7 and 8   |
| 9  | that references well-known techniques in the art is |
| 10 | if there are any other compositions or formulations |
| 11 | that use ingredients different from those of the    |
| 12 | specific examples in column 8 through 11, must      |
| 13 | those be prepared with preparation techniques that  |
| 14 | are not or were not generally known by persons of   |
| 15 | skill in the art?                                   |
| 16 | MS. EVERETT: Objection to form.                     |
| 17 | BY THE WITNESS:                                     |
| 18 | A. Depends on those other excipients that are       |
| 19 | not disclosed. It could be that, you know, you're   |
| 20 | making an emulsion, then you'd have to use a        |
| 21 | different type of processing method, for example.   |
| 22 | Q. Well, maybe let me ask it this way.              |
|    |   |
|    |   |
|    |   |
|    |   |

| 1  | A. Depends on the circumstance. That's a            |
|----|---|
| 2  | pretty general question.                            |
| 3  | Q. Sure. Let me ask you this way. I just            |
| 4  | want to confirm that your opinion is that the       |
| 5  | preparation techniques that would be used that were |
| 6  | well known in the art as stated in the '620 Patent, |
| 7  | the ability to prepare using those well-known       |
| 8  | techniques is limited to the examples that are      |
| 9  | specifically listed in columns 8 through 11, right? |
| 10 | MS. EVERETT: Objection to form.                     |
| 11 | BY THE WITNESS:                                     |
| 12 | A. I guess in the bottom of column 7 it says,       |
| 13 | you know, "The present invention is now illustrated |
| 14 | by the following examples which do not limit the    |
| 15 | scope of the invention," and then the second part   |
| 16 | is what we're talking about here, "In examples      |
| 17 | where only the ingredients of formulations          |
| 18 | according to the present invention are listed,      |
| 19 | these formulations are prepared by techniques well  |
| 20 | known in the art."                                  |
| 21 | So putting together these formulations,             |
| 22 | once you have the list of ingredients, the          |
|    |   |
|    |   |
|    |   |
|    |   |

| 1  | composition, you can use techniques well known in   |
|----|---|
| 2  | the art. That doesn't mean if you have slight       |
| 3  | changes to these ingredients you wouldn't be able   |
| 4  | to still use those same techniques well known in    |
| 5  | the art. Now, if you use completely different, you  |
| 6  | know, formulations, then, you know, that would be a |
| 7  | different question.                                 |
| 8  | Q. Okay. So if you could please take the            |
| 9  | '620 Patent out and look at claim 11.               |
| 10 | A. Claim 11.  |
| 11 | Q. Do you see that claim 11 depends from            |
| 12 | claim 7?  |
| 13 | A. Claim 11 says "A pharmaceutical                  |
| 14 | formulation of claim 7 wherein."                    |
| 15 | Q. So it depends from claim 7, right?               |
| 16 | A. That's right.                                    |
| 17 | Q. And 7 depends from claim 1?                      |
| 18 | A. That's right.                                    |
| 19 | Q. And so based on what you've told me is           |
| 20 | your opinion about the ability to actually process  |
| 21 | a formulation, would a person of ordinary skill     |
| 22 | know or not know using techniques known in the      |
|    |   |
|    |   |
|    |   |
|    |   |

| 1  | prior art how to formulate a pharmaceutical using   |
|----|---|
| 2  | some of the additional excipients claimed in, for   |
| 3  | example, claim 11 that would be added to any one of |
| 4  | these other specific examples?                      |
| 5  | A. Just to make sure I understand your              |
| 6  | question, so looking at claim 11, which gives       |
| 7  | suspending agent or thickening agent examples with  |
| 8  | respect to claim 7 which talks about other          |
| 9  | excipient classes, buffers, preservatives, which    |
| 10 | depends on claim 1 which is the dosage form         |
| 11 | suitable for nasal administration, your question is |
| 12 | would a person of ordinary skill be able to mix     |
| 13 | those excipients together?                          |
| 14 | Q. Or use those excipients in combination           |
| 15 | with one of the specific examples that you said     |
| 16 | could be slightly altered and still the person      |
| 17 | of ordinary skill would know how to process the     |
| 18 | formulation according to well-known techniques.     |
| 19 | A. Yeah. I think being able to choose like          |
| 20 | alginic acid, for example, they could they would    |
| 21 | know how to add process mix, hydrate that polymer   |
| 22 | if it was added to, you know, one of those          |
|    |   |
|    |   |
|    |   |

| 1  | examples.  |
|----|--|
| 2  | MR. CHESLOCK: I think we can take a break          |
| 3  | here and I can look over my notes and sort of see  |
| 4  | where I'm at, and then we can decide if we want to |
| 5  | go through lunch or have lunch or whatever. Is     |
| 6  | that okay?   |
| 7  | MS. EVERETT: Okay.                                 |
| 8  | (Whereupon, at 12:00 p.m., the                     |
| 9  | deposition was recessed, to                        |
| 10 | reconvene at 12:45 p.m., this                      |
| 11 | same day.)   |
| 12 |  |
| 13 |  |
| 14 |  |
| 15 |  |
| 16 |  |
| 17 |  |
| 18 |  |
| 19 |  |
| 20 |  |
| 21 |  |
| 22 |  |
|    |  |
|    |  |
|    |  |

| 1  | AFTERNOON SESSION                                  |
|----|--|
| 2  | (12:45 p.m.)                                       |
| 3  | HUGH DAVID CHARLES SMYTH, Ph.D.,                   |
| 4  | the witness at the time of recess, having been     |
| 5  | previously duly sworn, was further examined and    |
| 6  | testified as follows:                              |
| 7  | EXAMINATION  |
| 8  | (Resumed)  |
| 9  | BY MR. CHESLOCK:                                   |
| 10 | Q. Welcome back, Dr. Smyth, from lunch.            |
| 11 | A. Thank you.                                      |
| 12 | Q. I see you have your declaration in front        |
| 13 | of you. So if you could please your second         |
| 14 | declaration, that is. If you could go to page 26   |
| 15 | and let me know when you're there.                 |
| 16 | A. Page 26?  |
| 17 | Q. Yes.  |
| 18 | A. Okay.   |
| 19 | Q. Okay. And on page 26 at the very bottom         |
| 20 | you mention I'll do shorthand Dr. G's use of       |
| 21 | HPMC to modify the formulation of Cramer's Example |
| 22 | III; do you see that?                              |
|    |  |
|    |  |
|    |  |
|    |  |

| 1  | A. I see that.                                     |
|----|--|
| 2  | Q. And would you agree with me that HPMC by        |
| 3  | its full name is hydroxypropyl methylcellulose?    |
| 4  | A. That's one of its names, yes.                   |
| 5  | Q. And would you also agree with me that HPMC      |
| 6  | is considered a cellulose derivative?              |
| 7  | A. It is has a fundamental cellulose basis         |
| 8  | and it's derived from cellulose, yes.              |
| 9  | Q. So if we continue on in paragraph 42 onto       |
| 10 | the next page, 27, the first two bullet points     |
| 11 | mention the general fact that HPMC is available in |
| 12 | different viscosities, right?                      |
| 13 | A. Bullet points or                                |
| 14 | Q. Bullet points.                                  |
| 15 | A. "Dr. Govindarajan selected to use a low         |
| 16 | viscosity HPMC." "Dr. Herpin used a medium         |
| 17 | viscosity HPMC."                                   |
| 18 | Q. And HPMC would be considered a thickening       |
| 19 | agent, right?                                      |
| 20 | A. A thickening agent, a suspending agent.         |
| 21 | Q. And do you recall earlier you testified         |
| 22 | that viscosity for such thickening agents or       |
|    |  |
| l  |  |
| l  |  |
|    |  |

| Hugh David ( | Charles | Smyth - | - January | 31, | 2018 |
|--------------|---------|---------|-----------|-----|------|
|--------------|---------|---------|-----------|-----|------|

| 1  | suspension agents is important, right?             |
|----|--|
| 2  | A. Right. Viscosity of a formulation depends       |
| 3  | upon the type of thickening agent, the             |
| 4  | characteristics of that thickening agent.          |
| 5  | Q. And one of those characteristics would be       |
| 6  | the viscosity, right?                              |
| 7  | A. Its molecular weight of the polymer can         |
| 8  | give rise to different viscosities.                |
| 9  | Q. And in selection of a thickening agent or       |
| 10 | suspension agent viscosity would be part of an     |
| 11 | ultimate formulation process as well for a         |
| 12 | pharmaceutical drug, for example, right?           |
| 13 | MS. EVERETT: Objection to form.                    |
| 14 | BY THE WITNESS:                                    |
| 15 | A. Certain formulations that require               |
| 16 | increased viscosity you would look at viscosity in |
| 17 | those formulations, sure.                          |
| 18 | Q. If you could bring out again the                |
| 19 | '620 Patent. Before we went to lunch we were       |
| 20 | focused on claim 11; do you remember that?         |
| 21 | A. Yes.  |
| 22 | Q. Claim 11 lists a variety of suspending          |
|    |  |
|    |  |
|    |  |
|    |  |

| 1  | agents and thickening agents that were known in the |
|----|---|
| 2  | prior art before the '620 Patent, right?            |
| 3  | A. Claim 11 talks about different thickening        |
| 4  | agents that would have been previously used in a    |
|    |   |
| 5  | variety of different formulations.                  |
| 6  | Q. Before the '620 Patent?                          |
| 7  | A. Before the '620 Patent.                          |
| 8  | Q. And then with respect to the HPMC                |
| 9  | thickening or suspending agent that we've been      |
| 10 | discussing, I'd like to direct your attention to    |
| 11 | column 3 of the '620 Patent and in particular lines |
| 12 | 40 through 45. Do you see                           |
| 13 | A. Sorry. Which lines?                              |
| 14 | Q. Lines 40 through 45.                             |
| 15 | A. Okay. Got it.                                    |
| 16 | Q. Do you see there in that section of the          |
| 17 | '620 Patent it mentions thickening agents may be,   |
| 18 | for example, cellulose derivatives and one of the   |
| 19 | cellulose derivatives that's mentioned is HPMC      |
| 20 | where there seems to be a typo in the long form     |
| 21 | name at line 45; do you see that?                   |
| 22 | A. Yes.   |
|    |   |
|    |   |
|    |   |
|    |   |

| Q. Wo  | ould you agree that's a typo?            |  |
|--|--|--|
| A. Ye  | es.                                      |  |
| Q. So  | o that references in line 45 is the same |  |
| HPMC that w                                    | we were discussing earlier where         |  |
| viscosity v                                    | would be important, right?               |  |
| MS   | S. EVERETT: Objection to form.           |  |
| BY THE WIT                                     | NESS:                                    |  |
| A. Wł  | hat they have made is an error, a        |  |
| typographic                                    | cal error in line 45. It should read     |  |
| hydroxyprop                                    | pyl methylcellulose.                     |  |
| Q. Tł  | hat's HPMC, right?                       |  |
| A. Ye  | es.                                      |  |
| Q. I†  | t's a cellulose derivative according to  |  |
| the '620 Pa                                    | atent?                                   |  |
| A. Ye  | es.                                      |  |
| Q. So  | o if you wouldn't mind, let's go back to |  |
| claim 11 an                                    | nd you would agree with me that claim 11 |  |
| claims use of a suspending agent or thickening |  |  |
| agent that                                     | comprises cellulose derivatives, right?  |  |
| MS   | S. EVERETT: Objection to form and as to  |  |

|    | 1 480  |
|----|--|
|    |  |
| 1  | A. Claim 11, you know, is a dependent claim      |
| 2  | on claim 7 and claim 1 and they talk about       |
| 3  | "Suspending agent or said thickening agent       |
| 4  | comprises cellulose derivatives," among other    |
| 5  | things.  |
| 6  | Q. And as we just discussed, the '620 Patent     |
| 7  | itself clarifies that HPMC would be such a       |
| 8  | cellulose derivative, right?                     |
| 9  | MS. EVERETT: Objection to form.                  |
| 10 | BY THE WITNESS:                                  |
| 11 | A. It gives hydroxypropyl methylcellulose as     |
| 12 | an example of a cellulose derivative.            |
| 13 | Q. Does the '620 Patent provide any guidance     |
| 14 | as to what viscosity of HPMC should be used in a |
| 15 | formulation according to the invention?          |
| 16 | A. I would need to refresh my memory on the      |
| 17 | patent.  |
| 18 | Q. That's fine.                                  |
| 19 | (Witness reviewing document.)                    |
| 20 | BY THE WITNESS:                                  |
| 21 | A. So in column 3, about line 36 it talks        |
| 22 | about the thickening agents in preventing a      |
|    |  |
|    |  |
|    |  |
|    |  |

| <ul> <li>MS. EVERETT: Objection to form.</li> <li>BY THE WITNESS:</li> <li>A. I think a person reading this patent would</li> <li>understand that this is a certain preferred</li> <li>viscosity to prevent, you know, a solution from</li> <li>flowing out of the nose when you're adding a</li> <li>thickening agent. So it would include those</li> <li>thickening agents that they talk about in the next</li> <li>paragraph.</li> <li>Q. Right, but the guidance that's provided</li> </ul>   | r  | 1450 12  |

EVERETT: Objection to form.                    |
| <ul> <li>understand that this is a certain preferred</li> <li>viscosity to prevent, you know, a solution from</li> <li>flowing out of the nose when you're adding a</li> <li>thickening agent. So it would include those</li> <li>thickening agents that they talk about in the next</li> <li>paragraph.</li> <li>Q. Right, but the guidance that's provided</li> </ul>  | 13 | BY THE WITNESS:                                    |
| <ul> <li>viscosity to prevent, you know, a solution from</li> <li>flowing out of the nose when you're adding a</li> <li>thickening agent. So it would include those</li> <li>thickening agents that they talk about in the next</li> <li>paragraph.</li> <li>Q. Right, but the guidance that's provided</li> </ul>   | 14 | A. I think a person reading this patent would      |
| <ul> <li>17 flowing out of the nose when you're adding a</li> <li>18 thickening agent. So it would include those</li> <li>19 thickening agents that they talk about in the next</li> <li>20 paragraph.</li> <li>21 Q. Right, but the guidance that's provided</li> </ul>   | 15 | understand that this is a certain preferred        |
| <ul> <li>thickening agent. So it would include those</li> <li>thickening agents that they talk about in the next</li> <li>paragraph.</li> <li>Q. Right, but the guidance that's provided</li> </ul>  | 16 | viscosity to prevent, you know, a solution from    |
| <ul> <li>19 thickening agents that they talk about in the next</li> <li>20 paragraph.</li> <li>21 Q. Right, but the guidance that's provided</li> </ul>  | 17 | flowing out of the nose when you're adding a       |
| <ul> <li>20 paragraph.</li> <li>21 Q. Right, but the guidance that's provided</li> </ul>   | 18 | thickening agent. So it would include those        |
| 21 Q. Right, but the guidance that's provided  | 19 | thickening agents that they talk about in the next |
|  | 20 | paragraph.   |
| 22 here is for the ultimate result and not for the   | 21 | Q. Right, but the guidance that's provided         |
|  | 22 | here is for the ultimate result and not for the    |
|  |    |  |
|  |    |  |
|  |    |  |
| GragoryEdwards LLC Warldwide Court Poparting   |    |  |

| 1  | intermediate addition of, for example, HPMC,        |
|----|---|
| 2  | correct? Let me rephrase.                           |
| 3  | The guidance that's provided here in                |
| 4  | column 3 at 36 through 39, that is the guidance for |
| 5  | the viscosity of the solution itself and not any    |
| 6  | individual components of that solution which could, |
| 7  | for example, include HPMC, correct?                 |
| 8  | MS. EVERETT: Objection to form.                     |
| 9  | BY THE WITNESS:                                     |
| 10 | A. I don't think so, no. I read that                |
| 11 | differently.  |
| 12 | Q. Well, is there any other is there any            |
| 13 | guidance in the '620 Patent, for example, regarding |
| 14 | the weight-to-weight percentage that should be used |
| 15 | for HPMC?   |
| 16 | A. Well, I guess because HPMC comes in, you         |
| 17 | can't just give a weight-to-weight percentage       |
| 18 | because that's not going to tell you exactly what   |
| 19 | the viscosity is because different grades of HPMC   |
| 20 | are available with different molecular weights. So  |
| 21 | a weight-to-weight percentage for one HPMC is going |
| 22 | to give a different viscosity than the same weight- |
|    |   |
|    |   |
|    |   |
|    |   |

| 1  | to-weight percentage for a different HPMC grade.    |
|----|---|
| 2  | So you would not provide it in weight-to-weight     |
| 3  | percentages, but more something along the lines of  |
| 4  | what you see on line 39 in column 3 where you'd     |
| 5  | give a range of viscosities.                        |
| 6  | Q. But, again, the range of viscosities that        |
| 7  | are given in column 39 is for the entire solution   |
| 8  | itself and not any individual components, correct?  |
| 9  | A. The most important thing is the                  |
| 10 | composition viscosity, right. What you end up       |
| 11 | formulating your product to, that's the important   |
| 12 | resultant viscosity. Individual viscosities, you    |
| 13 | know, of different excipients and components are    |
| 14 | going to add to that overall viscosity and that's   |
| 15 | what you're formulating it to.                      |
| 16 | Q. So I think what you're telling me is that        |
| 17 | one of skill in the art would know by prior         |
| 18 | techniques how to use HPMC to achieve a particular  |
| 19 | viscosity result; is that correct?                  |
| 20 | A. One could if you knew the viscosity              |
| 21 | that you were looking for you could select a        |
| 22 | particular grade of HPMC, select a concentration of |
|    |   |
|    |   |
|    |   |
|    |   |

| 1  | that HPMC that's going to give you approximately   |
|----|--|
| 2  | that viscosity that you were looking for.          |
| 3  | Q. And that would all be known to one of           |
| 4  | skill in the art before the '620 Patent, correct?  |
| 5  | A. Selecting just one ingredient by itself         |
| 6  | and its concentration, there would be guidance     |
| 7  | along what viscosities those concentrations give   |
| 8  | for that particular ingredient, but you would have |
| 9  | to if you were making a formulation you have to    |
| 10 | consider not HPMC by itself, but in the total      |
| 11 | composition.                                       |
| 12 | Q. Right. And since there isn't any specific       |
| 13 | guidance as to those factors for HPMC in the       |
| 14 | '620 Patent, that would necessarily have to be     |
| 15 | known in the prior art, correct?                   |
| 16 | MS. EVERETT: Objection to form.                    |
| 17 | BY THE WITNESS:                                    |
| 18 | A. Well, no. I think that guidance is              |
| 19 | provided here in column 3, for example.            |
| 20 | Q. I just want to be clear what we're talking      |
| 21 | about here. You stated that if you knew the        |
| 22 | viscosity that you were looking for you could      |
|    |  |
|    |  |
|    |  |
|    |  |

| -  |   |
|----|---|
| 1  | select a particular grade of HPMC, select a         |
| 2  |   |
|    | concentration of that HPMC that's going to give you |
| 3  | approximately the viscosity that you're looking     |
| 4  | for. Do you remember that testimony?                |
| 5  | A. Yes. You're just making up a solution of         |
| 6  | HPMC.   |
| 7  | Q. And so what I'm asking is that would have        |
| 8  | been within the skill and understanding of one of   |
| 9  | skill in the art before the '620 Patent, right?     |
| 10 | A. Somebody could make a solution of HPMC           |
| 11 | before the '620 Patent for sure.                    |
| 12 | Q. So to clarify, if somebody could make a          |
| 13 | solution with a particular range of viscosity using |
| 14 | HPMC, not by itself, that would have been within    |
| 15 | the knowledge of a person of ordinary skill before  |
| 16 | the '620 Patent, right?                             |
| 17 | A. One would have to consider what other            |
| 18 | ingredients were in that composition in addition to |
| 19 | HPMC, but adding in HPMC to a formulation would     |
| 20 | have been known to increase the viscosity, for      |
| 21 | example.  |
| 22 | Q. I'd like to go back to claim 11 again. So        |
|    |   |
|    |   |
|    |   |
|    |   |
|    | GregoryEdwards, IIC   Worldwide Court Reporting     |

| 1  | there's some additional excipients recited in claim |
|----|---|
| 2  | 11 besides cellulose derivatives; do you agree with |
| 3  | that?   |
| 4  | MS. EVERETT: Objection, outside the                 |
| 5  | scope.  |
| 6  | BY THE WITNESS:                                     |
| 7  | A. There's other thickening agents listed in        |
| 8  | claim 11 in addition to cellulose derivatives, yes. |
| 9  | Q. So some of the examples of those are             |
| 10 | polyvinylpyrrlidone, polyvinyl alcohol, polyacrylic |
| 11 | acid, and pectin?                                   |
| 12 | MS. EVERETT: Objection, outside the                 |
| 13 | scope.  |
| 14 | BY THE WITNESS:                                     |
| 15 | A. I see those listed there, yes.                   |
| 16 | Q. I have a similar question with respect to        |
| 17 | those excipients. Those were known in the prior     |
| 18 | art to one of skill in the art before the           |
| 19 | '620 Patent, right?                                 |
| 20 | MS. EVERETT: Objection, outside the                 |
| 21 | scope.  |
| 22 | BY THE WITNESS:                                     |
|    |   |
|    |   |
|    |   |
|    |   |

ſ

| 1  | A. These excipients would be listed in, you        |
|----|--|
| 2  | know, reference books like the Handbook of         |
| 3  | Pharmaceutical Excipients. These would have been   |
| 4  | known as potential thickening agents for generally |
| 5  | pharmaceutical formulations.                       |
| 6  | Q. And similar to some of the questions I had      |
| 7  | about HPMC, is there any particular guidance about |
| 8  | the use of any of those additional excipients that |
| 9  | are claimed in claim 11 in the '620 Patent?        |
| 10 | MS. EVERETT: Objection, outside the                |
| 11 | scope.   |
| 12 | MR. CHESLOCK: On that I'll reiterate I             |
| 13 | think that's an objection that goes outside the    |
| 14 | permissible bounds. If you want to have a          |
| 15 | conversation about why this is relevant we can do  |
| 16 | that, but I'd appreciate not asserting that        |
| 17 | objection.   |
| 18 | MS. EVERETT: Andrew, we've had a couple            |
| 19 | depositions already go forward in this case and    |
| 20 | your co-counsel, Mike Houston, certainly used that |
| 21 | objection. So to the extent you have an issue with |
| 22 | that, I suggest you take it up with him. It's      |
|    |  |
|    |  |
|    |  |
|    |  |

|    |  | Page 134 |
|----|--|----------|
| 1  | outside the scope, you didn't challenge those      |          |
| 2  |  |          |
|    |  |          |
| 3  | objection stands.                                  |          |
| 4  | BY MR. CHESLOCK:                                   |          |
| 5  | Q. Same question. I'll repeat it.                  |          |
| 6  | With respect to those well-known                   |          |
| 7  | excipients that are additionally claimed in claim  |          |
| 8  | 11, there isn't anything specific about their use  |          |
| 9  | in the '620 Patent in terms of being able to       |          |
| 10 | process them for a formulation in the context that |          |
| 11 | you mentioned, correct?                            |          |
| 12 | MS. EVERETT: Objection, outside the                |          |
| 13 | scope.   |          |
| 14 | BY THE WITNESS:                                    |          |
| 15 | A. Processing polymers and thickening agents,      |          |
| 16 | mixing those types of techniques are known, if     |          |
| 17 | that's what your question is asking.               |          |
| 18 | MR. CHESLOCK: Okay. With that I don't              |          |
| 19 | have anything further.                             |          |
| 20 | MS. EVERETT: I think we're going to take           |          |
| 21 | a break and I'll talk to Dr. Smyth and see if we   |          |
| 22 | have anything for redirect.                        |          |
|    |  |          |
|    |  |          |
|    |  |          |
|    |  |          |

1 MR. CHESLOCK: And of course --2 MS. EVERETT: Then you'll go again if you 3 feel it's necessary. MR. CHESLOCK: That's exactly right. 4 5 Thank you. (A short break was had.) 6 7 EXAMINATION BY MS. EVERETT: 8 9 Dr. Smyth, I'd like to direct you to your Q. second declaration, which is CIP-2150. 10 11 Α. Okay. 12 Q. And specifically to paragraph 23. 13 Α. Yes. 14 Q. Do you recall giving testimony about this 15 paragraph earlier today? I recall talking about the claim 16 A. Yes. construction terms. 17 18 I'd just like to clarify a few points. 0n Q. 19 page 11 in the middle of that paragraph you wrote 20 in your second declaration "Cipla also told the 21 patent examiner that the term 'suitable for nasal 22 administration' was synonymous with the term 'nasal

|    |   | Page | 136 |
|----|---|------|-----|
| 1  | spray' as used in the '620 Patent"; do you see      |      |     |
| 2  | that?   |      |     |
| 3  | A. Yes.   |      |     |
| 4  | Q. What do you mean by that?                        |      |     |
| 5  | A. So I think if you look back on to page 10        |      |     |
| 6  | it helps sort of clarify this. In paragraph 21 I    |      |     |
| 7  | think it is that the terms the phrases "dosage      |      |     |
| 8  | forms suitable for nasal administration" and "nasal |      |     |
| 9  | spray" both require pharmaceutical formulations     |      |     |
| 10 | that are tolerable to patients, that are            |      |     |
| 11 | homogeneous, and that can be suitably deposited in  |      |     |
| 12 | the nasal mucosa. So on page 11 where Cipla told    |      |     |
| 13 | the patent examiner the term "suitable for nasal    |      |     |
| 14 | administration" was synonymous with the term "nasal |      |     |
| 15 | spray," what I mean by that is those both both      |      |     |
| 16 | of those terms must meet those requirements of      |      |     |
| 17 | being formulations that are tolerable to patients,  |      |     |
| 18 | homogeneous, and could be suitably deposited on the |      |     |
| 19 | nasal mucosa.                                       |      |     |
| 20 | Q. Now I'd like to have you turn to the             |      |     |
| 21 | patent and look at claim 1.                         |      |     |
| 22 | A. Yes.   |      |     |
|    |   |      |     |
|    |   |      |     |
|    |   |      |     |
|    |   |      |     |

| 1  | Q. And I direct you to the part of the claim       |
|----|--|
| 2  | that says "Pharmaceutical formulation is in a      |
|    |  |
| 3  | dosage form suitable for nasal administration"; do |
| 4  | you see that?                                      |
| 5  | A. Yes.  |
| 6  | Q. Can you give us examples of dosage forms        |
| 7  | that are suitable for nasal administration?        |
| 8  | A. So an example would be a nasal spray            |
| 9  | formulation. Another suitable for nasal            |
| 10 | administration could be nasal drops as we talked   |
| 11 | about earlier today in claim 13, I think it is, or |
| 12 | 14.  |
| 13 | Q. So I'll direct you to claim 14. Do you          |
| 14 | recall testifying about that earlier today?        |
| 15 | A. I do.   |
| 16 | Q. And earlier I believe you had some              |
| 17 | there was some confusion in the testimony on claim |
| 18 | 1 versus claim 14; do you recall that?             |
| 19 | A. Yes.  |
| 20 | Q. Are you able to reconcile that now?             |
| 21 | A. So having refreshed my memory on the claim      |
| 22 | construction, a dosage form suitable for           |
|    |  |
|    |  |
|    |  |
|    |  |

| 1  | administration would be a broader term that         |
|----|---|
| 2  | includes different formulations like nasal sprays   |
| 3  | and nasal drops. So even though that nasal spray    |
| 4  | and dosage forms suitable for nasal administration  |
| 5  | must meet the same these limitations of being       |
| 6  | tolerable, homogeneous, and suitably deposited, the |
| 7  | dosage form suitable for nasal administration would |
| 8  | be more general than that of a nasal spray.         |
| 9  | MS. EVERETT: I have no further questions.           |
| 10 | MR. CHESLOCK: I have a couple questions.            |
| 11 | FURTHER EXAMINATION                                 |
| 12 | BY MR. CHESLOCK:                                    |
| 13 | Q. Dr. Smyth, did you after the termination         |
| 14 | of my questioning have a discussion about the       |
| 15 | substance of your deposition testimony, including   |
| 16 | the testimony that you've given just now?           |
| 17 | A. I asked my attorneys whether or not I            |
| 18 | could look at my report because I thought I wasn't  |
| 19 | very clear on the point on the claim construction.  |
| 20 | Q. So when you say you've asked your                |
| 21 | attorneys if you could look at your report, did you |
| 22 | have any discussions about the substance of what    |
|    |   |
|    |   |
|    |   |
|    |   |

|    |  | Page 139 |
|----|--|----------|
| 1  | you had already testified and how you would change |          |
| 2  | that testimony, including anything that you said   |          |
| 3  | just now?  |          |
| 4  | MS. EVERETT: Objection to form,                    |          |
| 5  | mischaracterizes testimony.                        |          |
| 6  | BY THE WITNESS:                                    |          |
| 7  | A. I was pretty sure I hadn't been very clear      |          |
| 8  | earlier today. So I wanted to look at my report    |          |
| 9  | and read through the claim construction. So I      |          |
| 10 | asked if I could see that, but I didn't have any   |          |
| 11 | discussions on what I should say or, you know, how |          |
| 12 | I could change my testimony. I just wanted to look |          |
| 13 | at my report.                                      |          |
| 14 | MR. CHESLOCK: Okay. I don't have any               |          |
| 15 | other questions.                                   |          |
| 16 | (Whereupon, at 1:33 p.m. the                       |          |
| 17 | taking of the instant                              |          |
| 18 | deposition ceased.)                                |          |
| 19 |  |          |
| 20 |  |          |
| 21 |  |          |
| 22 |  |          |
|    |  |          |
|    |  |          |
|    |  |          |

CERTIFICATE OF SHORTHAND REPORTER - NOTARY PUBLIC 1 2 3 I, TINA M. ALFARO, Certified Reporter and Notary Public within and for the District of 4 5 Columbia do hereby certify: 6 7 That HUGH DAVID CHARLES SMYTH, Ph.D., the 8 witness whose deposition is hereinbefore set forth 9 was duly sworn by me before the commencement of 10 such deposition and that such deposition was taken 11 before me and is a true record of the testimony 12 given by such witness. 13 14 I further certify that the adverse party, 15 Cipla Limited, was represented by counsel at the deposition. 16 17 18 I further certify that the deposition of 19 HUGH DAVID CHARLES SMYTH, Ph.D., occurred at the 20 offices of Sterne Kessler Goldstein Fox, 1100 New 21 York Avenue, NW, Washington, D.C. on the 31st day 22 of January, 2018.

| 2 I further certify that I am not related to          |  |
|---|--|
| 3 any of the parties to this action by blood or       |  |
| 4 marriage, I am not employed by or an attorney to    |  |
| 5 any of the parties to this action, and that I am in |  |
| 6 no way interested, financially or otherwise, in the |  |
| 7 outcome of this matter.                             |  |
| 8   |  |
| 9 IN WITNESS WHEREOF, I have hereunto set my          |  |
| 10 hand this 31ST day of JANUARY, 2018.               |  |
| 11 My Commission expires October 31, 2020.            |  |
