INSTRUCTIONS

1. The primary purpose of this notebook is to protect your and the Company's Patent-Rights by keeping records of all original work in a form acceptable as evidence if any legal conflict arises.

2. When starting a page, enter the title, project number, and book number.

- Use ink for permanence -- avoid pencil.
- Record your work as you progress, including any spur-of-the-moment ideas which may be developed later.
- Avoid making notes on loose paper to be recopied.
- Record your work in such a manner that a co-worker can continue from where you stop. You might be ill and to protect your priority it could be urgent that the work continue while you are absent.

3. Give a complete account of your experiments and the results, both positive and negative, including your observations.

- Record all diagrams, layouts, plans, procedures, new ideas, or anything pertinent to your work including the details of any discussions with suppliers, or other people outside the Company.
- Do not try to erase any incorrect entries; draw lines deleting them, note the corrections, sign and date the changes. This extra care is worthwhile because of the necessity of original data to prove priority of new discoveries.

4. After entering your data, sign and date the entries.

- Explain your work to at least two wit-

nesses who are not co-inventors, and have them sign and date the pages in the place provided.

- Record the names of operators and witnesses present during any demonstration and have at least two witnesses sign the page. If no witnesses are present during an experiment of importance, repeat it in the presence of two witnesses.

5. Since computer programs can be patented these instructions apply to the development of computer software. In this case a description of the structure and operation of the program should be recorded in the notebook, together with a basic flow diagram which illustrates the essential features of the program. In the course of developing the code, the number of lines of code written each day should be recorded in the notebook, together with a statement of the portion of the flow diagram to which the section of code is directed.

6. This notebook and its contents are the exclusive property of the Company. It is confidential and the contents are not to be disclosed to anyone unless authorized by the Company. You must return it when completed, upon request, or upon termination of employment. It should be kept in a protected place. If loss occurs, notify your supervisor immediately, and make a written report describing the circumstances of the loss.

TITLE Ny-Tannic™ TABLETS

03/20/06

on Page No. 82

RECEIVED NY-TANNIC™ TABLETS FROM B. THOMAS, SAME 100 COUNT BOTTLE AS WAS LOGGED IN ON 01/24/06. AND WAS ASKED TO RETURN 50 TABLETS IN AN HOPE BOTTLE AND RETURN THE BOTTLE. THERE WERE A TOTAL OF 76 TABLETS IN THE BOTTLE AT THIS TIME. B. THOMAS RECEIVED THE NY-TANNIC™ COMMERCIAL BOTTLE BACK FROM ME WITH ONLY 26 TABLETS. THE 50 TABLET SAMPLE WAS PLACED WITH OUR OTHER TABLET RETURNS IN RA. 1374 AND LABELED ACCORDINGLY.

26 tablets given to Janet for sending outside as per Alex.

TITLE ASTELIN + Steroid

03/20/06 95

Project No. _____
Book No. _____

From Page No. 81A

Using a commercial 17ml bottle and Vial's VP3 pump, we attempted to pass commercial FLUTICAZONE PROPRIONATE NASAL SPRAY (LOT # C184889) THROUGH THE ASTELIN PACKAGING. 7.11ml = 10.98g (17ml bottle + VP3 pump, cap, & meter lock) 61.008 = 25.554g (pump assembly + bottle + suspension) NET = 14.57g

FOUR TO SIX PRIMING SPRAYS WERE ATTEMPTED BY K. KYLE. AFTER WHICH A UNIFORM PULVE WAS OBSERVED.

TITLE ASTELIN 03-33 REGISTRATION BATCHES

From Page No. 24

Project No.

Book No. _____

03/21/06 99

Online Registration Batches – Decatur 03/2006

Batch # 03-33-03c

DOM: 03/13/06

Batch Size: 3300L

No problems occurred during the making of this batch. This batch was made in the 940 gallon processing tank, samples were taken according to E-Reg 1112 sampling record (see below), the batch was filtered through a Millipore 0.45 micron PVDF 20" filter (code # CVHL-72P-P3), and transferred into the 940 gallon holding tank.

E-Requisition 1112

SAMPLING RECORD

03-33-05s

03-33-045

Batch Number: 03-33-03c

Bulk Solution

ACTIVITY	SAMPLE LOCATION	AMOUNT REQUIRED	PURPOSE	COLLECT BY/DATE
PROCESSING Following Step 11	Top of Compounding Tank	2 x 300 mL	Azelastine and BAC Assay	N/A
	Bottom of Compounding Tank	2 x 300 mL	Azelastine and BAC Assay	
PROCESSING Following Step 18	Top of Holding Tank	2 x 300 mL	Azelastine and BAC Assay	
	Bottom of Holding Tank	2 x 300 mL	Azelastine and BAC Assay	
PROCESSING Final Bulk Solution Prior to Packaging	Top of Holding Tank	1 x 300 mL	Specific Gravity	
		1 x 500 mL	Spray Pattern Test Solution	
		sprox. 220 mL	Microbial Limits	
		2 x 500 mL	Dink Release Testing	
		2 x 500 mL (glass bottles)	Bulk Retain	

The only point of note is that during the filtration process it became clear that the filtration rate slowed considerably after approximately the 1-hour mark. At this time, I began charting the filtration rate (see pg.101), and will continue to do so for the three remaining batches, for comparison.

TITLE ASTELIN 03-33 REGISTRATION BATCHES

03/21/06

From Page No. 99

Batch # 03-33-04s

DOM: 03/14/06

Batch Size: 330L

During the compounding of this batch, specifically steps # 8 through 11, it was observed that the 250 gallon processing tank began to shake (as it is equipped with shock-absorbing technology to counteract the force of the moving liquid inside) at a speed that caused the batch to "roll" or slosh around the inside of the tank, thus causing a loss of any true vortex. Without baffles to aid in the breaking up of the active and excipients, it was determined that the mixing speeds should be adjusted upwards until a suitable vortex could be obtained again.

Once this was done, no further problems arose in the manufacturing of the batch.

Samples were taken according to E-Req 1112 sampling record. The batch was filtered through a Millipore 0.45 micron PVDF 20" filter (code # CVHL-72P-P3), and transferred into a 375 gallon holding tank.

These new (greater) mixing speeds will be used for the two remaining 330L batches as well.

Batch # 03-33-05s

DOM: 03/15/06

No problems occurred during the making of this batch. This batch was made in the 250 gallon processing tank, samples were taken according to E-Req 1112 sampling record, the batch was filtered through a Millipore 0.45 micron PVDF 20" filter (code # CVHL-72P-P3), and transferred into a 375 gallon holding tank.

Batch # 03-33p-03s

DOM: 03/16/06

No problems occurred during the making of this batch. This batch was made in the 250 gallon processing tank, samples were taken according to E-Req 1113 sampling record (see below), the batch was filtered through a Millipore 0.45 micron PVDF 20" filter (code # CVHL-72P-P3), and transferred into a smaller holding tank.

2249.4 g

Theoretical specific gravity is 1.125 based on Processing Batch Record

Batch produced in Room #133

Manufacturing Procedure:

- In a stainless steel beaker (FINAL CONTAINER 724.8 g tare), add approximately 600g of Purified water.
- With mixing, add the Red #40 (✓) to the beaker and mix until uniform.
- Lower the mixing speed and slowly add the Propylene Glycol (✓) and mix until uniform.
- Raise the mixing speed again to obtain a sufficient vortex and add the Guaifenesin (✓), mixing until the solution is complete. Mixing Time: 5 min.
- Lower the mixing speed and add the Glycerin (✓) and Sorbitol Solution (✓). Mix until uniform. Mixing Time: 5 min.
- Raise the mixing speed and slowly add the following, mixing after each until the solution is complete:
Sodium Benzoate (✓)
Saccharin Sodium (✓)
Citric Acid (✓)
Raspberry Flavor (✓)
- Adjust the batch weight to 2249.4g with Purified water.
Before adjustment: Gross: 3097.6
Tare: 724.8
Net: 2372.8
After Adjustment: Gross: N/A
Tare: N/A
Net: N/A

Amount of water needed _____ g to bring final net weight to 2249.4g

- Mix for 10 minutes or until uniform.

Mixing Time: _____, Final pH: _____ (date _____), Final Viscosity: _____ (date _____)

Viscosity Testing - spindle # _____, 60 RPM for 1 minute @ 25°C

AT THE REQUEST OF C. YAMAC, 20 BOTTLES OF ASTELIN REFORMULATED #1027-17 WERE PLACED ON FREEZE/THAW STABILITY.

TEN BOTTLES WERE NUMBERED & PLACED UPRIGHT
TEN BOTTLES WERE NUMBERED & PLACED IN THE PRONE POSITION.

THEY WERE PLACED IN THE FREEZER IN ROOM #129 AND WILL UNDERGO FREEZE/THAW WITH EXTREME DIFFERENCES (FROM FREEZER TO 40°C OVEN).

WED. 03/29/06: 20 SAMPLES MOVED FROM FREEZER IN ROOM #129 TO 40°C/AMBIENT OVEN IN STABILITY CHAMBER ROOM = THAW #1.

FRI. 03/31/06: 20 SAMPLES, WHICH HAVE THAWED, ARE REMOVED FROM THE 40°C OVEN AND RETURNED TO THE FREEZER IN ROOM #129. NO CHANGES TO THE OUTSIDE OF THE CONTAINERS OBSERVED.

MON. 04/03/06: 20 SAMPLES ARE MOVED FROM THE FREEZER IN RM #129, BACK TO THE 40°C/AMBIENT OVEN IN THE STABILITY CHAMBER ROOM FOR THAW #2.

WED. 04/05/06: 20 SAMPLES ARE MOVED FROM 40°C/AMBIENT OVEN, TO THE FREEZER IN ROOM #129 FOR FREEZE #3. NO CHANGES TO THE OUTSIDE OF THE CONTAINERS WAS OBSERVED.

FRI. 04/07/06: 20 SAMPLES REMOVED FROM FREEZER & PLACED IN 40°C/AMBIENT. NO CHANGES OBSERVED UPON FREEZE #3.

MON. 04/10/06: 20 SAMPLES REMOVED FROM 40°C/AMBIENT AFTER THAW #3. NO CHANGES OBSERVED TO THE OUTSIDE OF THE CONTAINER.

BOTTLES WILL BE PLACED IN STABILITY LAB FOR RETAIN/POSSIBLE FUTURE TESTING.

TITLE ASTELIN REGISTRATION BATCHES

03/27/06

From Page No. 108 Post Decatur Trip Summary by K. KALE.**E1112: Post Manufacturing Observations Report.**

Authors: John D'Aconti & Kalidas Kale

Date: March 24, 2006

3300L Batch

In the week of March 13th four batches of Astelin Improved taste were manufactured. One full scale, 3300 liter size registration batch (Batch Number 03-33-03C), two 330 liter size batches (batch numbers 03-33-04S and 03-33-05S) and one 330 liter size placebo batch (batch number 03-33P-03S) were manufactured.

The 3300 liter size batch was prepared in the 940 gallon capacity processing tank. During the filtration of this batch after one hour, the filtration rate was considerably decreased. At this point 3136 kg of material was filtered. From this time onward filtration rate as a function of time was measured. The filtration rate at this point was only 14 liters per minute; it decreased to 8 liters per minute at the end of the filtration, when all liquid was filtered. The total batch was filtered within one hour and twenty four minutes.

The filter used was Durapore Cartridge filter without prefilter 20 inch, 0.45 micron from Millipore Corporation. The filtration area of this filter was 1.38 m². To maintain the good filtration rate throughout the filtration step, there are two options, either use same size filter with a prefilter or use 30 inch cartridge with larger filtration area 2.07 m². These options will be evaluated during the next manufacture of 3300 liter size batches.

330 liter size batches

Batch# 03-33-04S

These batches were processed in the 250 gallon capacity processing tanks. It was observed that at the time of addition of Azelastine HCl (step 8) the liquid was sloshing around the processing tank at the stirrer speed of 120 (+20) rpm. To create a vortex for proper mixing conditions, the stirrer speed was increased to 200 rpm. In step 9 the proper vortex was achieved at 175 rpm. In step 10 the stirrer speed was 175 rpm. In step 11 it was 125 rpm. Total batch was filtered without slowdown of the filtration rate.

Batch# 03-33-05S and Batch # 03-33P-03S

The stirrer speed was maintained at the same rate as used in the manufacture of batch# 03-33-04S. These two batches were filtered without slowdown of the filtration rate.

Sodium Citrate, USP, Dihydrate	0734	2C1804	0.068%	1.360	1.368
Benzalkonium Chloride, NF, 50% Soln.	2202	1C1304	0.025%	0.500	0.502
Water, Purified or Deionized			QS to 100%	QS to 2030.0g	

Manufacturing Procedure

- To a suitably sized container (tare weight 726.7 g), obtain 740g of deionized water. Begin mixing and heat to 80°C (175°F). Record the temperature. While mixing, slowly add the HPMC (✓) to the vortex of the mixing water. Mix for 20 minutes or until the mixture is lump-free. Record the mixing time. Do NOT let the mixture cool to below 60°C (140°F) while mixing. Temp: 80 °C Mixing Time: 20 min.
- Add approx. 1000g of deionized water. Cool to 32°C (90°F). Record the temperature. Temp: 28 °C
- Add the Azelastine HCl (✓), mixing until completely dissolved. Record the mixing time and temperature. Temp: 28 °C Mixing Time: 10 min.
- Add the following ingredients, one at a time, to the mixture: sucralose (✓), sorbitol solution (✓), EDTA (✓), sodium citrate (✓). Mix after each until solution is clear and record the overall mixing time. Mixing Time: 20 min.
- Add the Benzalkonium Chloride (✓) to the batch and mix for 10 minutes. Mixing Time: 10 min.
- Adjust batch weight to (2030.0g) with deionized water. Mix for 30 minutes or until uniform.

Before adjustment:	After adjustment:

TITLE OSMOLARITY TESTING: OPTIVAR
LOT # 02306A

04/14/06

From Page No. 112

OPTIVAR (AZELASTINE HCL EYEDROPS 0.05%) LOT #02306A WAS RECEIVED FROM CARDINAL, FROM A 250 L BATCH MANUFACTURED ON 04/04/06. IT WILL UNDERGO OSMOLARITY TESTING, AN OSMOLARITY ADJUSTMENT USING SORBITOL SOLUTION, AND REPEAT OSMOLARITY TESTING TO OBSERVE ANY CHANGE.

THE OSMETTE-A AUTOMATIC OSMOMETER (MODEL #5002, SER #HH10073) WAS CALIBRATED AS FOLLOWS:

- TURN TOGGLE TO "OPERATE"
- ALLOW MACHINE TO WARM UP FOR ≈ 15 MIN.
- ADD COOLANT UNTIL FULL
- PREPARE MULTIPLE 500 mOsm/kg & 100 mOsm/kg STD. SAMPLES.
- SET RANGE TO 0-2
- OPERATE TO SPECIAL
- PLACE 500 STD INTO MACHINE, ADJUST READINGS WITH "I" KNOB.
- SWITCH TO OPERATE AND READ A NEW, CLEAN 500 STD.
RESULT = 504, REPEAT: RESULT = 501
- REPEAT WITH 100 mOsm/kg STD, ADJUSTING WITH "II" KNOB.
RESULT = 97, 101
- TEST OPTIVAR SAMPLE (CARDINAL RESULT ≈ 250 mOsm/kg)
RESULT #1 = 242 mOsm/kg
#2 = 241 mOsm/kg

OSMOMETER CALIBRATED... SEE PG. 113 FOR DIRECTIONS FOR OSMOLARITY ADJUSTMENT OF SAMPLE (LOT #02306A) AND RESULTS.

EUTICHSONE PROPORTIONATE MASH SPRAY, 50 mcg
 Lot # C184889 Ex. P. Aug. 2007

13.0834g = CENTRIFUGE TUBE THREE WT.
 14.5465g = EUTICHSONE N.S.

SAMPLE WAS PLACED IN CENTRIFUGE FOR 30 MIN. SUPERSTANT
 WAS STILL CLOUDY, RETURNED TO CENTRIFUGE FOR AN
 ADDITIONAL 30 MINUTES.

THE SUPERSTANT WAS STILL CLOUDY. IT WAS FOUNDED OFF INTO
 A SCUTILLATION VIAL. THE SAMPLE WAS OPAQUE WHITE.

A MICROSCOPY SLIDE WAS PREPARED WITH A DROP OF THE SAMPLE
 AND VIEWED @ 40x MAGNIFICATION. THE SLIDE APPEARED TO
 BE FREE OF ANY SOLIDS, HOWEVER THE SAMPLE WAS PREPARED
 TO BE FILTERED.

USING A 10ml SPRING AND A 5cm STERILE ACROBISC, THE
 SAMPLE WAS FILTERED AND PLACED IN A NEW SCUTILLATION VIAL.

THE SAMPLE WAS NOT CLEAR (STILL OPAQUE AND WHITE) IT WAS
 PASSED THROUGH A 2um STERILE ACROBISC. THE RESULTING
 SAMPLE WAS STILL OPAQUE. IT WAS NEXT PASSED THROUGH A
 1um FILTER. THE RESULTING SAMPLE WAS STILL OPAQUE. IT
 WAS DECIDED THAT IT WOULD NEXT BE PASSED THROUGH A 0.45um
 STERILE ACROBISC.

ATTEMPTING TO PASS THE SAMPLE THROUGH THE 0.45um FILTER
 WAS EXTREMELY DIFFICULT. AFTER 23ml OF THE SAMPLE HAD
 PASSED THROUGH (AND WAS SEEMINGLY CLEAR NOW) THE PRESSURE
 NECESSARY TO FORCE THE SAMPLE THROUGH THE FILTER WAS
 MORE THAN THE FILTER COULD WITHSTAND. THE ACROBISC GAVE
 WAY AGAIN ITS CIRCUMFERENCE AND THE REMAINING SAMPLE
 WAS SPILLED AND LOST.
 THIS PROCESS WILL BE ATTEMPTED AGAIN TOMORROW.

Recorded by: [Signature] Date: 04/25/06 Verified by: Ken Bahrman Date: 10/25/07 To Page No. 117

From Page No. 114

15.3786g = SCUTILLATION VIAL + STIR ROD

23.5168g = VIAL + STIR ROD + PRODUCT *

8.1382g = PRODUCT (EUTICHSONE N.S. Lot # C184889)

∴ 0.0081g = ACETASTINE HCL (Lot # 0000002047) TO BE ADDED = 0.1%

∴ 23.5249g = TARGET GROSS WT.

23.52492g = ACTUAL WT. (gross)

* THE SAMPLE WAS PREPARED IN A SIMILAR FASHION TO THE SAMPLE FROM 04/25.

EUTICHSONE PROPORTIONATE MASH SPRAY (Lot # C184889) SAMPLE WAS ~~SENT~~ ^{STIRRED}
 SHALES WELL, TO MIX AND SUSPEND THE SAMPLE PROPERLY. THE SPRAY ATTACHED
 WAS CUT OFF THE AMBER GLASS BOTTLE AND Poured INTO A 50ml CENTRIFUGE
 VIAL. THE SAMPLE WAS SHAKED FOR ONE HOUR, THE SUPERSTANT POWERS
 OFF, THE SOLIDS WERE DISCARDED.

THE SUPERSTANT SAMPLE WAS INTRODUCED INTO A 10ml SPRING AND
 PASSED THROUGH AN INTERCONNECTED SERIES OF 5um, 2um, AND 1um
 STERILE ACROBISC (P.VDF) FILTERS. THE RESULTING SAMPLE WAS THEN
 SLOWLY AND DIFFICULTLY PASSED THROUGH A 0.45um ACROBISC.

THIS SAMPLE WAS TRANSFERRED INTO A PRE-WEIGHED SCUTILLATION VIAL
 CONTAINING A MAGNETIC STIR ROD, A 0.1% w/v SOLUTION OF ACETASTINE
 HCL WAS ADDED, USING AN ANALYTICAL BALANCE, AND THE SAMPLE WAS PLACED
 ON A STIRRED/HOTPLATE AND MIXED OVERNIGHT.

THE FOLLOWING MORNING THE SAMPLE WAS OBSERVED FOR CLOUDY/SCUMING
 AND IT WAS FOUND THAT THERE WAS STILL A WHITE PRECIPITATE OF THE
 ACETASTINE HCL THAT HAD NOT GONE INTO SOLUTION.

THIS SAMPLE WAS COVERED (GARNED) AND LABELED FOR POSSIBLE FURTHER
 EXPLANATION.

Recorded by: [Signature] Date: 04/26/06 Verified by: Ken Bahrman Date: 10/25/07 To Page No. 118

THE REMAINING SAMPLE FROM YESTERDAY'S EXPERIMENT WAS PLACED ON A SPINNING/ROTATE. A THERMOMETER WAS PLACED IN THE SAMPLE.

INITIAL TEMP. = 19°C
 TARGET TEMP. = 60°C OR OBSERVED CLARITY OF THE SAMPLE.

SAMPLE WAS HEATED, WITH STIRRING, TO $\approx 60^\circ\text{C}$ (THERM. = 69°C) AND HELD STRONG FOR 15 MIN. AFTER 15 MIN. THE STIRRING WAS STOPPED AND THE SAMPLE WAS REMOVED FROM THE HEAT.

THE SAMPLE REMAINED TRANSLUCENT AND IT IS ASSUMED THAT IF ALLOWED TO SIT LONG ENOUGH, THE DISSOLVED ACETASINE WILL BECOME VISIBLE AGAIN.

AFTER 30+ MIN, NO SOLID WAS VISIBLE. THE NEW WHITE OPAQUE SAMPLE WAS PLACED BACK ON THE STIRRER/ROTATE.

INITIAL TEMP. = 21°C
 TARGET TEMP. = 60°C FOR ≈ 15 MORE MIN, OR CLARITY OF SAMPLE.

AFTER ANOTHER 15 MINUTES OF HEATING, THE SAMPLE DID NOT CHANGE. IT REMAINS WHITE AND OPAQUE. IT WILL BE ALLOWED TO SETTLE AND FULLY COOL & BE OBSERVED FOR PRECIP. ^{04/27/06}

THE FOLLOWING MORNING (04/28/06) IT IS OBSERVED THAT SOME OF THE SOLID HAS, IN FACT, PRECIPITATED OUT OF THE 1044-117 SAMPLE.

IT IS DEEMED NECESSARY TO SUBMIT 1044-117 TO ANALYTICAL OR ACETASINE HPL ASSESS, AFTER IT HAS BEEN FILTERED ALTHOUGH A 0.45 μm ACRODISC AND FILTER.

Recorded by: John Kelly Date: 04/28/06 Verified by: Ken Bakman Date: 10/25/07
 To Page No. 119

AS PER K. KANE, THE REMAINING SAMPLE FROM 1044-117 WILL BE PASSED THROUGH A 0.45 μm FILTER AND SUBMITTED FOR ANALYTICAL TESTING.

AT THE REQUEST OF ANALYTICAL, AN ADDITIONAL SAMPLE OF TRANSPARENT SPIN SPIN SUPERNATANT (FILTERED THROUGH 0.45 μm ACRODISC) WILL BE PREPARED AND SUBMITTED FOR SIDE-BY-SIDE ANALYSIS/COMPARISON.

ONCE AGAIN A SAMPLE FROM LOT # C184889 OF FURTICOSOL REASONATE NASH SPIN, 50mg WAS OBTAINED. THE SAMPLE WAS STRIKEN TO SUSPEND THE MATERIAL, PLACED IN A CENTRIFUGE @ ≈ 3300 RPM FOR 1 HOUR, THE SOLIDS DISCRETE, AND THE SUPERNATANT POURED OFF.

THE SAMPLE WAS THEN PULSED INTO A 10cc SYRINGE AND FILTERED THROUGH SPIN, 2 μm , AND 1 μm ACRODISC FILTERS (STACKED). THE REMAINING SAMPLE WAS Poured INTO A NEW 10cc SYRINGE AND PLACED INTO A HOME-MADE CONSTANT PRESSURE SYSTEM AND ALLOWED TO SLOWLY FILTER THROUGH A 0.45 μm ACRODISC.

THE RESULTING SAMPLE WAS SUBMITTED TO ANALYTICAL (SIDE) FOR TESTING, ATTACHED # 1044-119.

(A.) 1025a - Add 40.15g. Avicel RC-S91 (1.5%)
 1045a - Add 40.15g. Avicel RC-S91 (1.5%)

RESULT IS A THICK, WHITE MIXTURE. ADDITIVE HCl WEAK
 GOES INTO SOLUTION. UNDISSOLVED CRUMBS ARE VISIBLE SUSPENDED
 IN A GEL-LIKE MIXTURE.

(B.) 1015a - ADDITIVE HCl 0.1% ADDED TO WATER, MIXED FOR
 5 MINUTES WITH DISSOLVED,
 1050a - Add Avicel RC-S91 1.5% TO THE ^{above} SOLUTION,
 MIXED FOR 30 MINUTES. Mixture BECOMES A UNIFORM
 SOLUTION.

SEPARATION OCCURS OVERNIGHT. TOP 1/3 IS CLOUDY WITH SOME UNDISSOLVED
 ADDITIVE HCl OBSERVED. BOTTOM 2/3 IS THICK, WHITE, OPAQUE MIXTURE
 THAT HAS SETTLED TO THE BOTTOM.

SAMPLE SENT TO AMYTTICA.

EXPERIMENT PERFORMED BY A. FARRAR.

TITLE

ASTELIN 03-33 PUMP CLEANING EVAL.

Project No. _____

Book No. _____

1044

03/01/07

157

From Page No. N/A

Report No: PPD-07-07P Version: 00

PURPOSE: TO DETERMINE IF THE CURRENT PUMP CLEANING PROCEDURE PROVIDED TO THE CONSUMER WITH COMMERCIAL ASTELIN IS SUITABLE FOR FORMULATION #03-33.

PACKAGING: BATCH 03-33-03c, 30 mL-FILL HDPE V-BOTTOM WITH VALOIS SPIGOT RING PUMP. (34.5 mL, HDPE, CODE #G1834, LOT # 0000002836).

EXPERIMENT: REMOVE DUST CAPS & CUPS FROM 20 BOTTLES OF AZELASTINE HCL SOLUTION 0.1% w/v, FORM. 03-33, BATCH 03-33-03c. IN A GOOD ACTUATE EACH PUMP AT LEAST 6 TIMES OR UNTIL A FINE SPRAY APPEARS. LABEL HALF THE BOTTLES "UPRIGHT" AND THE OTHER HALF "PRONE." NUMBER EACH SET 1 THROUGH 10. STORE THE TEN BOTTLES UPRIGHT IN A 40°C/AMBIENT RH CHAMBER. STORE THE TEN BOTTLES PRONE IN THE SAME CHAMBER. AFTER 2 WEEKS STORAGE, REMOVE BOTTLES AND ATTEMPT TO ACTUATE EACH.

OBSERVATIONS: ALL 20 SAMPLES PERFORMED IN SIMILAR FASHION. NOTHING NOTABLE OBSERVED DURING ^{THE} SPRAYING. ALL SAMPLES PERFORMED NORMALLY. INITIAL ~~02/12/07~~

SAMPLES WERE RE-CAPPED, NECK-CLIPS WERE REPLACED, AND ALL SAMPLES WERE PLACED IN 40°C/AMBIENT STORAGE CHAMBER AQ IN ROOM #142.

THESE SAMPLES WILL BE RETRIEVED AFTER 2 WEEKS AND EACH WILL BE ACTUATED (OR AT LEAST ATTEMPTED). IF THE PUMPS WILL NOT ACTUATE, THE PATIENT INSTRUCTIONS FROM THE COMMERCIAL PRODUCT WILL BE FOLLOWED.
