11	case numbers IP	R2018-00291, IPR2018-00318,		11	having been administered an oath, was examined and
12	IPR2018-00322,	IPR2018-00385.		12	testified as follows:
13	We are at	Knobbe Martens, San Diego,		13	
14	12790 El Camino	Real. My name is Daniel Bermudez		14	EXAMINATION
15	of Aptus Court Re	eporting located at 600 West		15	BY MR. SCHWARTZ:
16	Broadway, Suite	300, San Diego, California 92101.		16	Q. Good morning, Dr. Romesberg. As I said,
17		el please identify yourselves		17	my name is Robert Schwartz, I'm usually referred to
18	and state whom y	you represent.		18	as Bob Schwartz. I am an attorney representing
19	-	VARTZ: My name is Robert		19	Columbia University in these IPRs.
20		attorney with Fitzpatrick, Cella,		20	Would you please state your full name and
21		n New York. I represent Columbia		21	a home address for the record.
22		rith me is my colleague Zack		22	A. Floyd Romesberg, and my home address is
23	-	Fitzpatrick. And sitting next to		22	8109 Camino del Sol, La Jolla, California.
23		Menchen and then sitting next to		23 24	
		e from the firm Cooper & Dunham.			Q. And you have been deposed before, have
25				25	you not?
L					

ГР	byu Komesberg, Fil.D.		
1	Page 9 A. Thave.	1	Page 10 A. Yes.
2		2	Q. I am only asking for a yes or no.
3		3	A. Yes.
4		4	Q. What are the names of the attorneys you
5		5	met with?
6		6	A. Kerry and Nate.
7		7	Q. How many times did you meet with those
8		8	attorneys in preparation for your deposition today?
9		9	A. In person?
1		10	•
1		11	A. I didn't count, but I believe it would
1		12	
1		13	
1	-	14	
1	•	15	
1		16	
1	· · · ·	17	
1		18	
1		19	A. I am going to guess about the same, three
2	-	20	
2	•	21	Q. And when did those meetings take place?
2	-	22	
2		23	-
2	• • •	24	-
2	5 preparation for your deposition today?	25	
1	Page 11 Q. And I guess maybe my question was not	1	Page 12 A. I believe so. I don't, unfortunately,
2		2	recognize the numbers, but they are the four
3		3	nucleotide cases, yes.
4		4	Q. And you prepared an expert declaration in
5		5	each of those IPRs, correct?
6	Q. And approximately how much time did you	6	A. I did.
7		7	Q. I am ready to put the first exhibit out.
8	A. 20 hours, maybe, approximately.	8	I'm going to put in front of you what has been
9	Q. Outside of those meetings, did you meet	9	marked as Exhibit 1012.
1) with your attorneys at any other time and I	10	(Exhibit 1012 was previously marked for
1	I think you probably went into that. You met earlier	11	identification.)
1	2 over the past couple of months; is that correct?	12	BY MR. SCHWARTZ:
1	A. Yes.	13	Q. Exhibit 1012. These are the four
1	Q. And did you speak to anybody else other	14	these are the expert declarations that you
1	5 than your attorneys about this case?	15	submitted in these IPRs, correct?
1	A. No, I have not.	16	A. That is correct.
1	7 Q. And what did you do to prepare for	17	Q. And that's the first one. I can provide
1	3 today's deposition?	18	you with the others if you want them, maybe for the
1	A. Mostly read literature and documents and	19	time being, we'll just leave one out on the table
2	prefreshed my memory of all of the issues.	20	if that's okay with you, Counsel, or unless you
2	Q. And you understand that today's	21	want them all in front of him?
2	2 deposition is for four IPRs, which are	22	MR. ZIMMERMAN: That is fine with me.
2	3 IPR2018-00291, IPR2018-00318, IPR2018-00322,	23	MR. SCHWARTZ: It is just a lot of paper
		20	
2		24	<i>,</i> , , , , , , , , , , , , , , , , , ,
2 2	IPR2018-00385. That is your understanding that the		to put in front of you, so we'll just leave those

	a Romesberg, Ph.D.		University in the City of New Fork
1	Page 13 BY MR. SCHWARTZ:	1	Page 14 A. To the best of my knowledge, yes.
2	Q. Just look at the end of that declaration.	2	Q. And did you do any of your own literature
3	I just want to confirm that that's your signature.	3	searching independent of the materials that were
4	MR. ZIMMERMAN: Just so we have a clear	4	provided to you by the attorneys?
5	record, we're looking at Exhibit 1012 in the 291	5	A. Yes, I did.
6	IPR.	6	Q. And are all of those materials listed in
7	BY MR. SCHWARTZ:	7	your reports?
8		8	A. No, they are not.
	Q. Correct. That is what we're looking at	-	-
9	now.	9 10	Q. How did you decide what to list and what not to list?
10	Is that your signature?	11	
11 12	 A. That is my signature, yes. Q. Do you recall signing the three expert 	12	A. I chose ones that I thought were most relevant without diluting out into the many
13	reports in these cases as well?	12	• ·
14	A. Yes.	14	
15		14	
	Q. And what did you do to prepare your	15	
16	expert declarations in this case?	17	
17	A. A lot of reading, discussions with my		
18	lawyers, and a lot of writing and editing.	18	
19	Q. Did you receive any materials such as	19	you would have wanted me to list and bring here.
20	scientific references or patents from your	20 21	
21 22	attorneys that you used to prepare any of your declarations?	21	
			•
23	A. I did, yes.	23 24	5 1
24	Q. And are all of those materials listed in	24 25	
25	your reports?	25	Q. I am going to request that your counsel
1	Page 15	1	Page 16
1	provide us any materials that you relied on to form	1	MR. SCHWARTZ: I am going to put in front
2	provide us any materials that you relied on to form the opinions that are in your report that are not	2	MR. SCHWARTZ: I am going to put in front of it is marked as Exhibit 1013. It is entitled
2 3	provide us any materials that you relied on to form the opinions that are in your report that are not listed. So I'm making that request on the record,	2 3	MR. SCHWARTZ: I am going to put in front of it is marked as Exhibit 1013. It is entitled "DNA Sequencing."
2 3 4	provide us any materials that you relied on to form the opinions that are in your report that are not listed. So I'm making that request on the record, okay?	2 3 4	MR. 	ya Romesberg, Ph.D.		University in the City of New York
1	Page 17 case. It's an expert declaration in IPR2013-00517.	1	Page 18 three sentences in paragraph 36: "One of ordinary
2	Dr. Romesberg, this is one of the expert	2	skill in the art would have understood these
3	declarations that you submitted on behalf of	3	teachings of Tsien as stating that Tsien's
4	Illumina in the IPR challenges made by Intelligent	4	invention was nucleotide sequenced determination
5	Bio-Systems against Illumina; is that correct?	5	using DNA polymerase, and in particular, sequencing
6	A. It appears to be, yes.	6	by synthesis."
7	Q. And the Illumina patents at issue in	7	That is what you wrote, correct?
8	those IPRs related to SBS, correct?	8	A. Yes.
9	A. Yes.	9	Q. And it is your opinion that a person of
10	Q. Would you please go to Page 14 of your	10	ordinary skill in the art understood that Tsien's
11	declaration. And on Page 14, towards the bottom of	11	invention was SBS, correct?
12	the page there is a header entitled "PCT	12	MR. ZIMMERMAN: Objection. Vague as to
13	publication" W-zero I'm sorry. WO91/00678 to	13	
14	Tsien. Do you see?	14	BY MR. SCHWARTZ:
15	A. It's 06678.	15	Q. I am referring to a person of ordinary
16	Q. 00678? Thank you.	16	skill as you defined it in your declarations.
17	A. One zero.	17	MR. ZIMMERMAN: And, again, objection.
18	Q. To Tsien, right?	18	
19	A. Yes.	19	
20	Q. That's the same Tsien reference as	20	Q. Well, in your declaration you say as of
21	Exhibit 1013 in the present IPRs, correct?	21	2000, October 2000. So it's your understanding
22	A. Yes, it is.	22	that a person of ordinary skill and again,
23	Q. Please draw your attention to the last	23	whenever I use that term I am referring to how you
	three sentences in paragraph 36. And in paragraph	24	
25	36 you write and this is on Page 15, the last		Tsien's invention was SBS?
20		20	
1	Page 19 A Yes	1	Page 20 Page 20 Page 20
1	A. Yes.		multiple serial cycles, correct?
2	A. Yes. Q. And I'll specifically, again, for the	2	Multiple serial cycles, correct?
23	A. Yes. Q. And I'll specifically, again, for the record refer to Dr. Romesberg's definition of POSA		multiple serial cycles, correct?A. Yes.Q. And earlier I asked you about whether you
2 3 4	 A. Yes. Q. And I'll specifically, again, for the record refer to Dr. Romesberg's definition of POSA in paragraph 24 of his declarations in these cases. 	2 3 4	 multiple serial cycles, correct? A. Yes. Q. And earlier I asked you about whether you had been
2 3 4 5	 A. Yes. Q. And I'll specifically, again, for the record refer to Dr. Romesberg's definition of POSA in paragraph 24 of his declarations in these cases. So whenever I use the word person of ordinary skill 	2 3 4 5	 multiple serial cycles, correct? A. Yes. Q. And earlier I asked you about whether you had been A. I would have to think that. I believe it
2 3 4 5 6	 A. Yes. Q. And I'll specifically, again, for the record refer to Dr. Romesberg's definition of POSA in paragraph 24 of his declarations in these cases. So whenever I use the word person of ordinary skill or if I abbreviate it as POSA, we'll understand 	2 3 4 5 6	 multiple serial cycles, correct? A. Yes. Q. And earlier I asked you about whether you had been A. I would have to think that. I believe it requires serial reactions. I guess I'm not
2 3 4 5 6 7	 A. Yes. Q. And I'll specifically, again, for the record refer to Dr. Romesberg's definition of POSA in paragraph 24 of his declarations in these cases. So whenever I use the word person of ordinary skill or if I abbreviate it as POSA, we'll understand we're using your definition as you have it in your 	2 3 4 5 6 7	 multiple serial cycles, correct? A. Yes. Q. And earlier I asked you about whether you had been A. I would have to think that. I believe it requires serial reactions. I guess I'm not 100 percent positive that simply reading a single
2 3 4 5 6 7 8	A. Yes. Q. And I'll specifically, again, for the record refer to Dr. Romesberg's definition of POSA in paragraph 24 of his declarations in these cases. So whenever I use the word person of ordinary skill or if I abbreviate it as POSA, we'll understand we're using your definition as you have it in your declarations as of October 2000, correct?	2 3 4 5 6 7 8	 multiple serial cycles, correct? A. Yes. Q. And earlier I asked you about whether you had been A. I would have to think that. I believe it requires serial reactions. I guess I'm not 100 percent positive that simply reading a single nucleotide, a sequence of one I would have to
2 3 4 5 6 7 8 9	A. Yes. Q. And I'll specifically, again, for the record refer to Dr. Romesberg's definition of POSA in paragraph 24 of his declarations in these cases. So whenever I use the word person of ordinary skill or if I abbreviate it as POSA, we'll understand we're using your definition as you have it in your declarations as of October 2000, correct? A. Okay.	2 3 4 5 6 7 8 9	 multiple serial cycles, correct? A. Yes. Q. And earlier I asked you about whether you had been A. I would have to think that. I believe it requires serial reactions. I guess I'm not 100 percent positive that simply reading a single nucleotide, a sequence of one I would have to check to see if that was covered in this patent or
2 3 4 5 6 7 8 9 10	 A. Yes. Q. And I'll specifically, again, for the record refer to Dr. Romesberg's definition of POSA in paragraph 24 of his declarations in these cases. So whenever I use the word person of ordinary skill or if I abbreviate it as POSA, we'll understand we're using your definition as you have it in your declarations as of October 2000, correct? A. Okay. Q. Can you please go back to the Tsien 	2 3 4 5 6 7 8 9 10	 multiple serial cycles, correct? A. Yes. Q. And earlier I asked you about whether you had been A. I would have to think that. I believe it requires serial reactions. I guess I'm not 100 percent positive that simply reading a single nucleotide, a sequence of one I would have to check to see if that was covered in this patent or not.
2 3 4 5 6 7 8 9 10 11	 A. Yes. Q. And I'll specifically, again, for the record refer to Dr. Romesberg's definition of POSA in paragraph 24 of his declarations in these cases. So whenever I use the word person of ordinary skill or if I abbreviate it as POSA, we'll understand we're using your definition as you have it in your declarations as of October 2000, correct? A. Okay. Q. Can you please go back to the Tsien reference, 1013. And again, this is the same Tsien 	2 3 4 5 6 7 8 9 10 11	 multiple serial cycles, correct? A. Yes. Q. And earlier I asked you about whether you had been A. I would have to think that. I believe it requires serial reactions. I guess I'm not 100 percent positive that simply reading a single nucleotide, a sequence of one I would have to check to see if that was covered in this patent or not. Q. No, I am just saying Tsien writes. When
2 3 4 5 6 7 8 9 10 11 12	 A. Yes. Q. And I'll specifically, again, for the record refer to Dr. Romesberg's definition of POSA in paragraph 24 of his declarations in these cases. So whenever I use the word person of ordinary skill or if I abbreviate it as POSA, we'll understand we're using your definition as you have it in your declarations as of October 2000, correct? A. Okay. Q. Can you please go back to the Tsien reference, 1013. And again, this is the same Tsien reference that you write about in Exhibit 2007, the 	2 3 4 5 6 7 8 9 10 11 12	 multiple serial cycles, correct? A. Yes. Q. And earlier I asked you about whether you had been A. I would have to think that. I believe it requires serial reactions. I guess I'm not 100 percent positive that simply reading a single nucleotide, a sequence of one I would have to check to see if that was covered in this patent or not. Q. No, I am just saying Tsien writes. When Tsien writes that "One obvious potential
2 3 4 5 6 7 8 9 10 11 12 13	 A. Yes. Q. And I'll specifically, again, for the record refer to Dr. Romesberg's definition of POSA in paragraph 24 of his declarations in these cases. So whenever I use the word person of ordinary skill or if I abbreviate it as POSA, we'll understand we're using your definition as you have it in your declarations as of October 2000, correct? A. Okay. Q. Can you please go back to the Tsien reference, 1013. And again, this is the same Tsien reference that you write about in Exhibit 2007, the declaration that we just looked at, correct? 	2 3 4 5 6 7 8 9 10 11 12 13	 multiple serial cycles, correct? A. Yes. Q. And earlier I asked you about whether you had been A. I would have to think that. I believe it requires serial reactions. I guess I'm not 100 percent positive that simply reading a single nucleotide, a sequence of one I would have to check to see if that was covered in this patent or not. Q. No, I am just saying Tsien writes. When Tsien writes that "One obvious potential shortcoming of the present invention is that it
2 3 4 5 6 7 8 9 10 11 12 13 14	 A. Yes. Q. And I'll specifically, again, for the record refer to Dr. Romesberg's definition of POSA in paragraph 24 of his declarations in these cases. So whenever I use the word person of ordinary skill or if I abbreviate it as POSA, we'll understand we're using your definition as you have it in your declarations as of October 2000, correct? A. Okay. Q. Can you please go back to the Tsien reference, 1013. And again, this is the same Tsien reference that you write about in Exhibit 2007, the declaration that we just looked at, correct? A. Yes. 	2 3 4 5 6 7 8 9 10 11 12 13 14	 multiple serial cycles, correct? A. Yes. Q. And earlier I asked you about whether you had been A. I would have to think that. 110	yd Romesberg, Ph.D.		University in the City of New York
1	Page 25 Thank you.	1	Page 26 that is long and of practical use, the sort of way
2	(Exhibit 1015 was marked for	2	people would have wanted to use this, then yes.
3	identification.)	3	Q. So practical use of SBS would require
4	BY MR. SCHWARTZ	4	that about 25 base pairs be sequenced?
5	Q. I put in front of you Exhibit 1015, which	5	A. As long as that practical use required
6	is patent No. 5547839. And again, this is from one	6	determining the sequence of a large piece of DNA
7	of the IPRs, but I believe they are all the same.	7	that you don't know, yes.
8	This is actually Illumina's exhibit, so it was used	8	Q. And that's consistent with your testimony
9	in all of your declarations.	9	that about 25 base pairs is required for SBS?
10	The first named inventor is Dower.	10	A. Yes. The reason I'm qualifying this is
11	Exhibit 1015 is the same Dower patent that you rely	11	because there was a lot of interest, especially at
12	on in your expert declarations in the present IPRs,	12	this time, in determining single nucleotide
13	correct?	13	polymorphisms. And that would be a specific single
14	A. It is.	14	
15	Q. And the Dower patent relates to SBS,	15	someone could have wanted to use these sorts of
16	correct?	16	things for that, but that would not be the de novo
17	A. That is correct.	17	sequencing that we're talking about.
18	Q. And so, like Tsien's SBS method, Dower's	18	Q. But that would still require about 25
19	SBS method, since it's about SBS, requires	19	base pairs of sequencing to do snips, right?
20	sequencing about 25 base pairs. That's your	20	A. Well, it depends on how you would do it.
21	opinion?	21	If you had a small piece of DNA and you just wanted
22	A. Again, it is a little bit dependent on	22	to know what the nucleotide was at position at
23	what your goal of sequencing by synthesis would be.	23	the position immediately following a primer, then
24		24	
25		25	Q. Let's go back to your deposition
		20	Q. Let's go buok to your deposition
1	Page 27 transcript that was Exhibit 2035. And go back to	1	Page 28 Q. And that is in relation to your testimony
1	transcript that was Exhibit 2035. And go back to	1	Q. And that is in relation to your testimony
2	transcript that was Exhibit 2035. And go back to that page 179 we actually looked at before. And we	2	Q. And that is in relation to your testimony above that SBS requires sequencing of 25 base
	transcript that was Exhibit 2035. And go back to that page 179 we actually looked at before. And we were looking at the top of the page where you		Q. And that is in relation to your testimony above that SBS requires sequencing of 25 base pairs, correct?
23	transcript that was Exhibit 2035. And go back to that page 179 we actually looked at before. And we were looking at the top of the page where you testified that approximately 25 base pairs would be	2 3 4	 Q. And that is in relation to your testimony above that SBS requires sequencing of 25 base pairs, correct? A. That is correct.
2 3 4 5	transcript that was Exhibit 2035. And go back to that page 179 we actually looked at before. And we were looking at the top of the page where you testified that approximately 25 base pairs would be needed for sequencing by synthesis. That was your	2 3 4 5	 Q. And that is in relation to your testimony above that SBS requires sequencing of 25 base pairs, correct? A. That is correct. Q. So even if you are sequencing using SBS
2 3 4 5 6	transcript that was Exhibit 2035. And go back to that page 179 we actually looked at before. And we were looking at the top of the page where you testified that approximately 25 base pairs would be needed for sequencing by synthesis. That was your testimony, right?	2 3 4 5 6	 Q. And that is in relation to your testimony above that SBS requires sequencing of 25 base pairs, correct? A. That is correct. Q. So even if you are sequencing using SBS for SNPs, your testimony is it still requires about
2 3 4 5	transcript that was Exhibit 2035. And go back to that page 179 we actually looked at before. And we were looking at the top of the page where you testified that approximately 25 base pairs would be needed for sequencing by synthesis. That was your testimony, right? A. Yes.	2 3 4 5	 Q. And that is in relation to your testimony above that SBS requires sequencing of 25 base pairs, correct? A. That is correct. Q. So even if you are sequencing using SBS for SNPs, your testimony is it still requires about 25 base pairs of sequencing, correct?
2 3 4 5 6 7	transcript that was Exhibit 2035. And go back to that page 179 we actually looked at before. And we were looking at the top of the page where you testified that approximately 25 base pairs would be needed for sequencing by synthesis. That was your testimony, right? A. Yes. Q. And would you look just down to about	2 3 4 5 6 7	 Q. And that is in relation to your testimony above that SBS requires sequencing of 25 base pairs, correct? A. That is correct. Q. So even if you are sequencing using SBS for SNPs, your testimony is it still requires about 25 base pairs of sequencing, correct? A. So again, as I tried to explain a second
2 3 4 5 6 7 8	transcript that was Exhibit 2035. And go back to that page 179 we actually looked at before. And we were looking at the top of the page where you testified that approximately 25 base pairs would be needed for sequencing by synthesis. That was your testimony, right? A. Yes. Q. And would you look just down to about line 12. And you were asked a question "If you	2 3 4 5 6 7 8	 Q. And that is in relation to your testimony above that SBS requires sequencing of 25 base pairs, correct? A. That is correct. Q. So even if you are sequencing using SBS for SNPs, your testimony is it still requires about 25 base pairs of sequencing, correct? A. So again, as I tried to explain a second ago, it would depend on how you were doing it. So
2 3 4 5 6 7 8 9	transcript that was Exhibit 2035. And go back to that page 179 we actually looked at before. And we were looking at the top of the page where you testified that approximately 25 base pairs would be needed for sequencing by synthesis. That was your testimony, right? A. Yes. Q. And would you look just down to about line 12. And you were asked a question "If you were looking for a single nucleotide polymorphism	2 3 4 5 6 7 8 9	 Q. And that is in relation to your testimony above that SBS requires sequencing of 25 base pairs, correct? A. That is correct. Q. So even if you are sequencing using SBS for SNPs, your testimony is it still requires about 25 base pairs of sequencing, correct? A. So again, as I tried to explain a second ago, it would depend on how you were doing it. So if you simply had a genome or a large piece of DNA
2 3 4 5 6 7 8 9 10	transcript that was Exhibit 2035. And go back to that page 179 we actually looked at before. And we were looking at the top of the page where you testified that approximately 25 base pairs would be needed for sequencing by synthesis. That was your testimony, right? A. Yes. Q. And would you look just down to about line 12. And you were asked a question "If you	2 3 4 5 6 7 8 9 10	 Q. And that is in relation to your testimony above that SBS requires sequencing of 25 base pairs, correct? A. That is correct. Q. So even if you are sequencing using SBS for SNPs, your testimony is it still requires about 25 base pairs of sequencing, correct? A. So again, as I tried to explain a second ago, it would depend on how you were doing it. So if you simply had a genome or a large piece of DNA and you wanted to identify all the differences, the
2 3 4 5 6 7 8 9 10 11	transcript that was Exhibit 2035. And go back to that page 179 we actually looked at before. And we were looking at the top of the page where you testified that approximately 25 base pairs would be needed for sequencing by synthesis. That was your testimony, right? A. Yes. Q. And would you look just down to about line 12. And you were asked a question "If you were looking for a single nucleotide polymorphism using a sequencing by synthesis method, what	2 3 4 5 6 7 8 9 10 11	 Q. And that is in relation to your testimony above that SBS requires sequencing of 25 base pairs, correct? A. That is correct. Q. So even if you are sequencing using SBS for SNPs, your testimony is it still requires about 25 base pairs of sequencing, correct? A. So again, as I tried to explain a second ago, it would depend on how you were doing it. So if you simply had a genome or a large piece of DNA
2 3 4 5 6 7 8 9 10 11 12	transcript that was Exhibit 2035. And go back to that page 179 we actually looked at before. And we were looking at the top of the page where you testified that approximately 25 base pairs would be needed for sequencing by synthesis. That was your testimony, right? A. Yes. Q. And would you look just down to about line 12. And you were asked a question "If you were looking for a single nucleotide polymorphism using a sequencing by synthesis method, what minimum read length would you need?" And then	2 3 4 5 6 7 8 9 10 11 12	 Q. And that is in relation to your testimony above that SBS requires sequencing of 25 base pairs, correct? A. That is correct. Q. So even if you are sequencing using SBS for SNPs, your testimony is it still requires about 25 base pairs of sequencing, correct? A. So again, as I tried to explain a second ago, it would depend on how you were doing it. So if you simply had a genome or a large piece of DNA and you wanted to identify all the differences, the SNPs, then what I said in this testimony is
2 3 4 5 6 7 8 9 10 11 12 13	transcript that was Exhibit 2035. And go back to that page 179 we actually looked at before. And we were looking at the top of the page where you testified that approximately 25 base pairs would be needed for sequencing by synthesis. That was your testimony, right? A. Yes. Q. And would you look just down to about line 12. And you were asked a question "If you were looking for a single nucleotide polymorphism using a sequencing by synthesis method, what minimum read length would you need?" And then there was you started to answer that. There was	2 3 4 5 6 7 8 9 10 11 12 13	 Q. And that is in relation to your testimony above that SBS requires sequencing of 25 base pairs, correct? A. That is correct. Q. So even if you are sequencing using SBS for SNPs, your testimony is it still requires about 25 base pairs of sequencing, correct? A. So again, as I tried to explain a second ago, it would depend on how you were doing it. So if you simply had a genome or a large piece of DNA and you wanted to identify all the differences, the SNPs, then what I said in this testimony is correct. The reason I caveated it a minute ago was
2 3 4 5 6 7 8 9 10 11 12 13 14	transcript that was Exhibit 2035. And go back to that page 179 we actually looked at before. And we were looking at the top of the page where you testified that approximately 25 base pairs would be needed for sequencing by synthesis. That was your testimony, right? A. Yes. Q. And would you look just down to about line 12. And you were asked a question "If you were looking for a single nucleotide polymorphism using a sequencing by synthesis method, what minimum read length would you need?" And then there was you started to answer that. There was an objection. And then you were instructed you can	2 3 4 5 6 7 8 9 10 11 12 13 14	 Q. And that is in relation to your testimony above that SBS requires sequencing of 25 base pairs, correct? A. That is correct. Q. So even if you are sequencing using SBS for SNPs, your testimony is it still requires about 25 base pairs of sequencing, correct? A. So again, as I tried to explain a second ago, it would depend on how you were doing it. So if you simply had a genome or a large piece of DNA and you wanted to identify all the differences, the SNPs, then what I said in this testimony is correct. The reason I caveated it a minute ago was because I could also imagine cases where one would
2 3 4 5 6 7 8 9 10 11 12 13 14 15	transcript that was Exhibit 2035. And go back to that page 179 we actually looked at before. The reason I caveated it a minute ago was because I could also imagine cases where one would have a small piece of DNA and one would need to simply know the identity of a nucleotide at a given position, in which case then you would not need a read length of 25. So it really depends on the application, but for the sort of practical applications that I think we're going to spend most of our time discussing here, you would need read lengths that
2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20 21 22 23	transcript that was Exhibit 2035. And go back to that page 179 we actually looked at before. And we were looking at the top of the page where you testified that approximately 25 base pairs would be needed for sequencing by synthesis. That was your testimony, right? A. Yes. Q. And would you look just down to about line 12. And you were asked a question "If you were looking for a single nucleotide polymorphism using a sequencing by synthesis method, what minimum read length would you need?" And then there was you started to answer that. There was an objection. And then you were instructed you can answer. And then you said your answer was: "It would not change, because the SNP identification comes from the assembled genome, so you still need to assemble the genome, you still need to place the sequence within the genome to know or not a specific nucleotide is a SNP. So the SNP is determined after you assemble the genome, so it doesn't change anything."	2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20 21 22 23	 Q. And that is in relation to your testimony above that SBS requires sequencing of 25 base pairs, correct? A. That is correct. Q. So even if you are sequencing using SBS for SNPs, your testimony is it still requires about 25 base pairs of sequencing, correct? A. So again, as I tried to explain a second ago, it would depend on how you were doing it. So if you simply had a genome or a large piece of DNA and you wanted to identify all the differences, the SNPs, then what I said in this testimony is correct. The reason I caveated it a minute ago was because I could also imagine cases where one would have a small piece of DNA and one would need to simply know the identity of a nucleotide at a given position, in which case then you would not need a read length of 25. So it really depends on the application, but for the sort of practical applications that I think we're going to spend most of our time discussing here, you would need read lengths that were longer than one.

	ya Romesberg, Fli.D.		
1	Page 29 it is your opinion that you need to sequence about	1	Page 30 Q. And that's a practical application of
2	25 base pairs?	2	SBS, is that what you are saying?
3	MR. ZIMMERMAN: Objection. Asked and	3	A. No. In the particular practical
4	answered.	4	application that I was talking about in this
5	MR. SCHWARTZ: You can't make that	5	testimony, yes. But as I just said, I can imagine
6	objection. It's just objection.	6	there would be other practical applications I
7	BY MR. SCHWARTZ	7	don't know all practical applications that people
8	Q. I'm just looking at your testimony. I	8	might be interested in where you would need a
9	just want to make sure that we understand what your	9	read length of one.
10	testimony is.	10	Q. What practical application would you need
11	A. What I was referring to here was a	11	a read length of one?
12	certain sort of application. I think it's very	12	A. As I described a minute ago, I'll try to
13	possible that people would have other applications	13	be clear now. You might have a piece of DNA. And
14	in mind where they would not need read lengths of	14	you might say I want to know what the nucleotide is
15	25.	15	at position 28. You could design a primer of 27
16	BY MR. SCHWARTZ:	16	length or a primer that terminates immediately
17	Q. But you did testify that for SBS you need	17	
18	a read length of 25. That is your testimony?	18	interested in, and you could get a read length of
19	A. The context of what I was talking about	19	one and determine what that nucleotide was.
20	at the time, which I hope I made clear, would	20	Now, that was not the applications that I
21	require read lengths of 25, yes.	21	was describing in the context that we're
22	Q. And that would be the same if it was for	22	discussing. But it would seem to be an application
23	SNPs?	23	that someone might be interested in. I'm just
24	A. In the context of what I was describing	24	trying to be clear about what people might have
25	here, which I hope I have made clear.	25	read Tsien or Prober and been interested in doing.
	Page 31		Page 32
1	And lots of people are interested in lots of	1	Q. I am going to mark another exhibit.
2	different things.	2	MR. SCHWARTZ: Court reporter, before
3	Q. But you were asked specifically about	3	you hand that over, this is an exhibit that has not
4	SBS, and your testimony was that 25 base pairs	4	yet been marked. Could you please mark this as
5	would be required.	5	Exhibit 2080.
6	A. Everything that we just talked about is	6	(Exhibit 2080 was marked for
7	SBS. SBS in the context of my testimony here was	7	identification.)
8	in a specific situation where you would need a read	8	MR. SCHWARTZ: You might want to put the
9	length of 25. I can certainly imagine other	9	numbers on the bottom in case we have to come back
10	applications of SBS where you would not need that.	10	to it. This is going to be 2080.
11	Q. And the practical applications that you	11	BY MR. SCHWARTZ:
12	need 25 when you're sequencing for purposes of	12	Q. And this is a document entitled "Video
13	determining a gene, how it fits into the genome, is	13	Deposition of Floyd Romesberg Ph.D." dated
14	that something like that?	14	January 14, 2014.
15	A. Yeah. So if you don't know anything	15	Do you see that?
16	about the piece of DNA that you're sequencing, for	16	A. I do.
17	example, and you need to assemble it, you need	17	Q. And this is the transcript of your
18	certain overlap with other sequences to be able to	18	deposition in IPR2013-00128, correct?
19	do that, and so you would need longer read lengths	19	A. It would seem to be, yes.
20	there.	20	Q. Again, the Illumina patents that were
21	Q. Going back to the Tsien patent	21	being challenged in this IPR relate to SBS,
22	application. Tsien doesn't disclose any sequencing	22	correct?
23	data using a 30 allyl nucleotide, correct?	23	A. Yes.
24	A. He does not have data for a three prime	24	Q. Please turn to page 101 of the
25	allyl nucleotide, that is correct.	25	transcript. Please draw your attention to line 6.
		1	

1	Page 33 And starting at line 6 of the transcript it reads.	1	Page 34 moiety, correct?
2	"Question: And would you agree with me	2	"Answer: Yes, correct.
3	that in 2002 it was known that you could cleave a	3	"Question: And that is a fluorescent
4	linker and a protecting group under identical	4	label attached to the base of the nucleotide,
5	conditions?	5	correct?
6	"Answer: No, I would not agree with	6	"Answer: yes.
	that.	7	"Question: Okay. And then the next
8	"Question: So if we can turn to start	8	sentence says the tag may be chemically cleaved,
9	Exhibit 1012, that is the Tsien reference. And in	9	either separately or simultaneously with the
10	particular, if can you turn to page 28 of Tsien."	10	deblocking step. Do you see that?
11	Now I'd like to stop here, because I just	11	"Answer: I do.
12	want to clarify something about the transcript.	12	"Question: And the deblocking step that
13	In the transcript, Tsien, the T-S-I-E-N	13	Tsien is referring to there is the three prime OH
14	paper is misspelled as C-H-E-N, correct? That is	14	blocking group, correct?
15	just a misspelling, correct?	15	"Answer: Yes.
16		16	
	A. I believe so, yes.	17	"Question: So then would you" strike that.
17	Q. So what you're actually the question	18	
18	and answer in the section relates to the Tsien,		"Question: So then you would agree that
19	T-S-I-E-N, reference that is the same Tsien that we	19	the concept that it was known in the art that you
20	have been looking at in these IPRs, correct?	20	could cleave a base labeled, a cleavable linker
21	A. I believe so, yes.	21	attaching a label to a base in a three prime
22	Q. Let's jump to line 25 of the same page,	22	protecting group.
23	and starting at line 25, the transcript reads, "So	23	"Answer: Just to be clear, I guess what I
24	you see there that Tsien says the one method	24	
25	involves the use of a tag attached to the base	25	whether with here is whether the suggestion had
	Dave 25		
4	Page 35	4	Page 36
	been made or whether it was known that you could.	1	A. You read it correctly.
2	been made or whether it was known that you could. I see that Tsien is suggesting that, and that was	2	A. You read it correctly.Q. And in your deposition testimony in
2 3	been made or whether it was known that you could. I see that Tsien is suggesting that, and that was known in, and that had been suggested in the	2 3	 A. You read it correctly. Q. And in your deposition testimony in IPR2013-00128, you specifically pointed out that
2 3 4	been made or whether it was known that you could. I see that Tsien is suggesting that, and that was known in, and that had been suggested in the literature built before. I don't believe that	2 3 4	 A. You read it correctly. Q. And in your deposition testimony in IPR2013-00128, you specifically pointed out that Tsien does not provide any data for simultaneously

1	data that a nucleotide with a 30 allyl protecting	1	Q. I'm not asking you about drawing
2	group could be used successfully for SBS?	2	inferences. I'm asking you for any direct data
3	A. No. I think there was data that suggested that it could be used.	3	just the way you testified that you weren't aware
4	Q. What data was that?	45	of any data that showed cleavable linker on three
5			prime protecting group cleavage. Are you aware of
	A. Reaction showing that you could	6	any data in the context of actually using it for
7	efficiently deprotect the you could efficiently remove the deprotecting group.	7	SBS in an SBS reaction, are you aware of any data that a 3'-O-allyl protecting group on a
8	Q. That wasn't in the context of SBS, was	8	nucleotide that was used for SBS?
9 10	it?	10	
11	A. No, but you asked about any data.	11	testimony here referred to simultaneously
12	Q. I asked specifically let me ask the	12	
13	question again, okay?	13	
14	Are you aware of any prior art prior to	14	
15	October 2000 that provided any data that a	15	
16	nucleotide with a 3'-O-allyl protecting group could	16	
17	be used for SBS?	17	-
18	A. I think that the way you asked the	18	-
19	question, the way I would interpret that is that	19	• •
20	any data would include data that a person of	20	
21	ordinary skill in the art would look at a	21	nucleotide, it is common, and any person of
22	particular reaction, let's say, and draw an	22	
23	impression about the same or similar reaction that	23	-
24	could be used in SBS. And I believe there was data	24	
25	for that.	25

He never used it for sequencing by synthesis, but I just want to be clear that there were examples in literature that was very close that any person of ordinary skill in the art would have relied on to draw an opinion. And more importantly, an opinion was available in 2000 is the point I am trying to make. Q. There was no data. There was no data using a 3'-O-allyl nucleotide for SBS, because that nucleotide would have required a label attached to it as well, correct? A. Just to be clear, sequencing by synthesis is a multi-step process, and there were reports of some of those steps, not all of them. So in a
2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18	you draw an impression about how optimistic or pessimistic you are about whether or not something's feasible, whether or not you're interested in it. And there was a lot of data, not on an exact nucleotide that would have been used for sequencing by synthesis. So this is not exactly in a sequencing by synthesis reaction, but there were very similar reactions where people would have drawn an impression. So there certainly was data, but there was not data that was used within the context of an exact sequencing by synthesis reaction. Q. So it's your testimony here today that you are not aware of any data prior to October 2000 where an 3'-O-allyl nucleotide was used precisely in a SBS reaction? A. That is correct. So can I add one qualifier to that? Metzker did report prior to 2000 a reaction that	2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19	 A. No, but he did look at steps that would be involved in that. Q. But he didn't do it for SBS. He never evaluated that nucleotide for SBS, correct? A. He never used it for sequencing by synthesis, but I just want to be clear that there were examples in literature that was very close that any person of ordinary skill in the art would have relied on to draw an opinion. And more importantly, an opinion was available in 2000 is the point I am trying to make. Q. There was no data. There was no data using a 3'-O-allyl nucleotide for SBS, because that nucleotide would have required a label attached to it as well, correct? A. Just to be clear, sequencing by synthesis is a multi-step process, and there were reports of some of those steps, not all of them. So in a complete sequencing by synthesis reaction, there
2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20	you draw an impression about how optimistic or pessimistic you are about whether or not something's feasible, whether or not you're interested in it. And there was a lot of data, not on an exact nucleotide that would have been used for sequencing by synthesis. So this is not exactly in a sequencing by synthesis reaction, but there were very similar reactions where people would have drawn an impression. So there certainly was data, but there was not data that was used within the context of an exact sequencing by synthesis reaction. Q. So it's your testimony here today that you are not aware of any data prior to October 2000 where an 3'-O-allyl nucleotide was used precisely in a SBS reaction? A. That is correct. So can I add one qualifier to that? Metzker did report prior to 2000 a reaction that was getting very, very close. It examined parts of	2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20	 A. No, but he did look at steps that would be involved in that. Q. But he didn't do it for SBS. He never evaluated that nucleotide for SBS, correct? A. He never used it for sequencing by synthesis, but I just want to be clear that there were examples in literature that was very close that any person of ordinary skill in the art would have relied on to draw an opinion. And more importantly, an opinion was available in 2000 is the point I am trying to make. Q. There was no data. There was no data using a 3'-O-allyl nucleotide for SBS, because that nucleotide would have required a label attached to it as well, correct? A. Just to be clear, sequencing by synthesis is a multi-step process, and there were reports of some of those steps, not all of them. So in a complete sequencing by synthesis reaction, there was no data, no one had tried to my knowledge. But
2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20 21	you draw an impression about how optimistic or pessimistic you are about whether or not something's feasible, whether or not you're interested in it. And there was a lot of data, not on an exact nucleotide that would have been used for sequencing by synthesis. So this is not exactly in a sequencing by synthesis reaction, but there were very similar reactions where people would have drawn an impression. So there certainly was data, but there was not data that was used within the context of an exact sequencing by synthesis reaction. Q. So it's your testimony here today that you are not aware of any data prior to October 2000 where an 3'-O-allyl nucleotide was used precisely in a SBS reaction? A. That is correct. So can I add one qualifier to that? Metzker did report prior to 2000 a reaction that was getting very, very close. It examined parts of what you would use for sequencing by synthesis	2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20 21	 A. No, but he did look at steps that would be involved in that. Q. But he didn't do it for SBS. He never evaluated that nucleotide for SBS, correct? A. He never used it for sequencing by synthesis, but I just want to be clear that there were examples in literature that was very close that any person of ordinary skill in the art would have relied on to draw an opinion. And more importantly, an opinion was available in 2000 is the point I am trying to make. Q. There was no data. If you want me to describe what I'm trying to say, if I can remember the context, any sequencing by synthesis method stringently requires you simply of the sequencing by synthesis methods that we're describing, you simply have to remove that protecting group.
2 3 4 5 6 7 8	 correct? A. Correct. Q. That's what you wrote? A. That is what I wrote. Q. It is your opinion that stringent requirements for nucleotide analogs with removable 3'-OH terminators presented a formidable obstacle to developing stable and efficiently deprotected 	2 3 4 5 6 7 8	 A. Yes, I think I was quoting a paper there. If you want me to describe what I'm trying to say, if I can remember the context, any sequencing by synthesis method stringently requires you simply of the sequencing by synthesis methods that we're describing, you simply have to remove that protecting group. Q. Under aqueous conditions?
2 3 4 5 6 7 8 9	 correct? A. Correct. Q. That's what you wrote? A. That is what I wrote. Q. It is your opinion that stringent requirements for nucleotide analogs with removable 3'-OH terminators presented a formidable obstacle to developing stable and efficiently deprotected 3'-OH protecting groups for SBS. That was your 	2 3 4 5 6 7 8 9	 A. Yes, I think I was quoting a paper there. If you want me to describe what I'm trying to say, if I can remember the context, any sequencing by synthesis method stringently requires you simply of the sequencing by synthesis methods that we're describing, you simply have to remove that protecting group. Q. Under aqueous conditions? A. Under conditions where the DNA is not
2 3 4 5 6 7 8 9 10	 correct? A. Correct. Q. That's what you wrote? A. That is what I wrote. Q. It is your opinion that stringent requirements for nucleotide analogs with removable 3'-OH terminators presented a formidable obstacle to developing stable and efficiently deprotected 3'-OH protecting groups for SBS. That was your opinion, correct? 	2 3 4 5 6 7 8 9 10	 A. Yes, I think I was quoting a paper there. If you want me to describe what I'm trying to say, if I can remember the context, any sequencing by synthesis method stringently requires you simply of the sequencing by synthesis methods that we're describing, you simply have to remove that protecting group. Q. Under aqueous conditions? A. Under conditions where the DNA is not going to denature, so, yeah, it's very likely there
2 3 4 5 6 7 8 9 10 11	 correct? A. Correct. Q. That's what you wrote? A. That is what I wrote. Q. It is your opinion that stringent requirements for nucleotide analogs with removable 3'-OH terminators presented a formidable obstacle to developing stable and efficiently deprotected 3'-OH protecting groups for SBS. That was your opinion, correct? A. Again, that is what is written there, 	2 3 4 5 6 7 8 9 10 11	 A. Yes, I think I was quoting a paper there. If you want me to describe what I'm trying to say, if I can remember the context, any sequencing by synthesis method stringently requires you simply of the sequencing by synthesis methods that we're describing, you simply have to remove that protecting group. Q. Under aqueous conditions? A. Under conditions where the DNA is not going to denature, so, yeah, it's very likely there is going to have to be water there.
2 3 4 5 6 7 8 9 10 11 12	 correct? A. Correct. Q. That's what you wrote? A. That is what I wrote. Q. It is your opinion that stringent requirements for nucleotide analogs with removable 3'-OH terminators presented a formidable obstacle to developing stable and efficiently deprotected 3'-OH protecting groups for SBS. That was your opinion, correct? A. Again, that is what is written there, yes. 	2 3 4 5 6 7 8 9 10 11 12	 A. Yes, I think I was quoting a paper there. If you want me to describe what I'm trying to say, if I can remember the context, any sequencing by synthesis method stringently requires you simply of the sequencing by synthesis methods that we're describing, you simply have to remove that protecting group. Q. Under aqueous conditions? A. Under conditions where the DNA is not going to denature, so, yeah, it's very likely there is going to have to be water there. Q. Well, you actually say that there, it was
2 3 4 5 6 7 8 9 10 11 12 13	 correct? A. Correct. Q. That's what you wrote? A. That is what I wrote. Q. It is your opinion that stringent requirements for nucleotide analogs with removable 3'-OH terminators presented a formidable obstacle to developing stable and efficiently deprotected 3'-OH protecting groups for SBS. That was your opinion, correct? A. Again, that is what is written there, yes. Q. And one of those obstacles is that SBS 	2 3 4 5 6 7 8 9 10 11 12 13	 A. Yes, I think I was quoting a paper there. If you want me to describe what I'm trying to say, if I can remember the context, any sequencing by synthesis method stringently requires you simply of the sequencing by synthesis methods that we're describing, you simply have to remove that protecting group. Q. Under aqueous conditions? A. Under conditions where the DNA is not going to denature, so, yeah, it's very likely there is going to have to be water there. Q. Well, you actually say that there, it was required that they were removable under aqueous
2 3 4 5 6 7 8 9 10 11 12 13 14	 correct? A. Correct. Q. That's what you wrote? A. That is what I wrote. Q. It is your opinion that stringent requirements for nucleotide analogs with removable 3'-OH terminators presented a formidable obstacle to developing stable and efficiently deprotected 3'-OH protecting groups for SBS. That was your opinion, correct? A. Again, that is what is written there, yes. Q. And one of those obstacles is that SBS requires aqueous conditions for cleavage of the 	2 3 4 5 6 7 8 9 10 11 12 13 14	 A. Yes, I think I was quoting a paper there. If you want me to describe what I'm trying to say, if I can remember the context, any sequencing by synthesis method stringently requires you simply of the sequencing by synthesis methods that we're describing, you simply have to remove that protecting group. Q. Under aqueous conditions? A. Under conditions where the DNA is not going to denature, so, yeah, it's very likely there is going to have to be water there. Q. And there was an objection.	2 3 4 5 6	but that would at least maybe be in the realm of doable." That is your testimony, correct? A. Yes. Q. Is it fair to say that your opinion is
2 3 4 5 6	line 22, the transcript reads: "Question: Does the rapid removal of a 3' protecting group relate to the eventual application of the SBS method?" And there was an objection. "Answer: So you are asking if the	2 3 4 5 6	 but that would at least maybe be in the realm of doable." That is your testimony, correct? A. Yes. Q. Is it fair to say that your opinion is that SBS requires sequencing somewhere between 25
2 3 4 5 6 7	line 22, the transcript reads: "Question: Does the rapid removal of a 3' protecting group relate to the eventual application of the SBS method?" And there was an objection. "Answer: So you are asking if the efficiency of removal depends required depends	2 3 4 5 6 7	 but that would at least maybe be in the realm of doable." That is your testimony, correct? A. Yes. Q. Is it fair to say that your opinion is that SBS requires sequencing somewhere between 25 to 30 bases?
2 3 4 5 6 7 8	line 22, the transcript reads: "Question: Does the rapid removal of a 3' protecting group relate to the eventual application of the SBS method?" And there was an objection. "Answer: So you are asking if the efficiency of removal depends required depends on the application?	2 3 4 5 6 7 8	 but that would at least maybe be in the realm of doable." That is your testimony, correct? A. Yes. Q. Is it fair to say that your opinion is that SBS requires sequencing somewhere between 25 to 30 bases? A. I think it's my opinion that I'm not sure
2 3 4 5 6 7 8 9	line 22, the transcript reads: "Question: Does the rapid removal of a 3' protecting group relate to the eventual application of the SBS method?" And there was an objection. "Answer: So you are asking if the efficiency of removal depends required depends on the application? "Question: Sure. That is a better way	2 3 4 5 6 7 8 9	 but that would at least maybe be in the realm of doable." That is your testimony, correct? A. Yes. Q. Is it fair to say that your opinion is that SBS requires sequencing somewhere between 25 to 30 bases? A. I think it's my opinion that I'm not sure doable is a word, but, yes, I think depending on
2 3 4 5 6 7 8 9 10	line 22, the transcript reads: "Question: Does the rapid removal of a 3' protecting group relate to the eventual application of the SBS method?" And there was an objection. "Answer: So you are asking if the efficiency of removal depends required depends on the application? "Question: Sure. That is a better way of asking it. Thank you. "Answer: So that depends. I mean, so	2 3 4 5 6 7 8 9 10	 but that would at least maybe be in the realm of doable." That is your testimony, correct? A. Yes. Q. Is it fair to say that your opinion is that SBS requires sequencing somewhere between 25 to 30 bases? A. I think it's my opinion that I'm not sure doable is a word, but, yes, I think depending on the specific application, and, again, getting back
2 3 4 5 6 7 8 9 10 11	<pre>line 22, the transcript reads: "Question: Does the rapid removal of a 3' protecting group relate to the eventual application of the SBS method?" And there was an objection. "Answer: So you are asking if the efficiency of removal depends required depends on the application? "Question: Sure. That is a better way of asking it. Thank you. "Answer: So that depends. I mean, so that depends. Are you talking about sequencing by</pre>	2 3 4 5 6 7 8 9 10 11	 but that would at least maybe be in the realm of doable." That is your testimony, correct? A. Yes. Q. Is it fair to say that your opinion is that SBS requires sequencing somewhere between 25 to 30 bases? A. I think it's my opinion that I'm not sure doable is a word, but, yes, I think depending on the specific application, and, again, getting back to the discussion that we had earlier, if you are doing the if your goal is the application that
2 3 4 5 6 7 8 9 10 11 12 13	line 22, the transcript reads: "Question: Does the rapid removal of a 3' protecting group relate to the eventual application of the SBS method?" And there was an objection. "Answer: So you are asking if the efficiency of removal depends required depends on the application? "Question: Sure. That is a better way of asking it. Thank you. "Answer: So that depends. I mean, so that depends. Are you talking about sequencing by synthesis applications?	2 3 4 5 6 7 8 9 10 11 12 13	 but that would at least maybe be in the realm of doable." That is your testimony, correct? A. Yes. Q. Is it fair to say that your opinion is that SBS requires sequencing somewhere between 25 to 30 bases? A. I think it's my opinion that I'm not sure doable is a word, but, yes, I think depending on the specific application, and, again, getting back to the discussion that we had earlier, if you are doing the if your goal is the application that we are describing here, and that is de novo
2 3 4 5 6 7 8 9 10 11 12 13 14	line 22, the transcript reads: "Question: Does the rapid removal of a 3' protecting group relate to the eventual application of the SBS method?" And there was an objection. "Answer: So you are asking if the efficiency of removal depends required depends on the application? "Question: Sure. That is a better way of asking it. Thank you. "Answer: So that depends. I mean, so that depends. Are you talking about sequencing by synthesis applications? "Question: Yes.	2 3 4 5 6 7 8 9 10 11 12 13 14	 but that would at least maybe be in the realm of doable." That is your testimony, correct? A. Yes. Q. Is it fair to say that your opinion is that SBS requires sequencing somewhere between 25 to 30 bases? A. I think it's my opinion that I'm not sure doable is a word, but, yes, I think depending on the specific application, and, again, getting back to the discussion that we had earlier, if you are doing the if your goal is the application that we are describing here, and that is de novo sequencing of unknown sequences of DNA, then, yeah,
2 3 4 5 6 7 8 9 10 11 12 13 14 15	line 22, the transcript reads: "Question: Does the rapid removal of a 3' protecting group relate to the eventual application of the SBS method?" And there was an objection. "Answer: So you are asking if the efficiency of removal depends required depends on the application? "Question: Sure. That is a better way of asking it. Thank you. "Answer: So that depends. I mean, so that depends. Are you talking about sequencing by synthesis applications? "Question: Yes. "Answer: Sure, but they all have to be	 2 3 4 5 6 7 8 9 10 11 12 13 14 15 	 but that would at least maybe be in the realm of doable." That is your testimony, correct? A. Yes. Q. "Answer: So that depends. I mean, so that depends. Are you talking about sequencing by synthesis applications? "Question: Yes. "Answer: Sure, but they all have to be efficient. There is a minimum that you are going to have to be. You are going to have to get 30 nucleotide read lengths minimum in a time that is not in a time that's feasible. "Question: What is a feasible time?</pre>	2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20	 but that would at least maybe be in the realm of doable." That is your testimony, correct? A. Yes. Q. Is it fair to say that your opinion is that SBS requires sequencing somewhere between 25 to 30 bases? A. I think it's my opinion that I'm not sure doable is a word, but, yes, I think depending on the specific application, and, again, getting back to the discussion that we had earlier, if you are doing the if your goal is the application that we are describing here, and that is de novo sequencing of unknown sequences of DNA, then, yeah, you would need read lengths of on that order. Q. And then the testimony we just read you testified that a reasonable time for deprotection of the 3'-O-allyl protecting group in SBS is an hour or less. That is what you testified, right?
2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20 21	<pre>line 22, the transcript reads: "Question: Does the rapid removal of a 3' protecting group relate to the eventual application of the SBS method?" And there was an objection. "Answer: So you are asking if the efficiency of removal depends required depends on the application? "Question: Sure. That is a better way of asking it. Thank you. "Answer: So that depends. I mean, so that depends. Are you talking about sequencing by synthesis applications? "Question: Yes. "Answer: Sure, but they all have to be efficient. There is a minimum that you are going to have to be. You are going to have to get 30 nucleotide read lengths minimum in a time that is not in a time that's feasible. "Question: What is a feasible time? "Answer: You know, that's a relative</pre>	2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20 21	 but that would at least maybe be in the realm of doable." That is your testimony, correct? A. Yes. Q. Is it fair to say that your opinion is that SBS requires sequencing somewhere between 25 to 30 bases? A. I think it's my opinion that I'm not sure doable is a word, but, yes, I think depending on the specific application, and, again, getting back to the discussion that we had earlier, if you are doing the if your goal is the application that we are describing here, and that is de novo sequencing of unknown sequences of DNA, then, yeah, you would need read lengths of on that order. Q. And then the testimony we just read you testified that a reasonable time for deprotection of the 3'-O-allyl protecting group in SBS is an hour or less. That is what you testified, right? A. Well, I am hemmed and hawed a little bit
2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20 21 22	line 22, the transcript reads: "Question: Does the rapid removal of a 3' protecting group relate to the eventual application of the SBS method?" And there was an objection. "Answer: So you are asking if the efficiency of removal depends required depends on the application? "Question: Sure. That is a better way of asking it. Thank you. "Answer: So that depends. I mean, so that depends. Are you talking about sequencing by synthesis applications? "Question: Yes. "Answer: Sure, but they all have to be efficient. There is a minimum that you are going to have to be. You are going to have to get 30 nucleotide read lengths minimum in a time that is not in a time that's feasible. "Question: What is a feasible time? "Answer: You know, that's a relative term. I mean, I threw out the idea of five hours	2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20 21 22	 but that would at least maybe be in the realm of doable." That is your testimony, correct? A. Yes. Q. Is it fair to say that your opinion is that SBS requires sequencing somewhere between 25 to 30 bases? A. I think it's my opinion that I'm not sure doable is a word, but, yes, I think depending on the specific application, and, again, getting back to the discussion that we had earlier, if you are doing the if your goal is the application that we are describing here, and that is de novo sequencing of unknown sequences of DNA, then, yeah, you would need read lengths of on that order. Q. And then the testimony we just read you testified that a reasonable time for deprotection of the 3'-O-allyl protecting group in SBS is an hour or less. That is what you testified, right? A. Well, I am hemmed and hawed a little bit because I think that is kind of a tough question.
2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20 21	line 22, the transcript reads: "Question: Does the rapid removal of a 3' protecting group relate to the eventual application of the SBS method?" And there was an objection. "Answer: So you are asking if the efficiency of removal depends required depends on the application? "Question: Sure. That is a better way of asking it. Thank you. "Answer: So that depends. I mean, so that depends. Are you talking about sequencing by synthesis applications? "Question: Yes. "Answer: Sure, but they all have to be efficient. There is a minimum that you are going to have to be. You are going to have to get 30 nucleotide read lengths minimum in a time that is not in a time that's feasible. "Question: What is a feasible time? "Answer: You know, that's a relative term. I mean, I threw out the idea of five hours being not reasonable. And I think that is probably	2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20 21	 but that would at least maybe be in the realm of doable." That is your testimony, correct? A. Yes. Q. Is it fair to say that your opinion is that SBS requires sequencing somewhere between 25 to 30 bases? A. I think it's my opinion that I'm not sure doable is a word, but, yes, I think depending on the specific application, and, again, getting back to the discussion that we had earlier, if you are doing the if your goal is the application that we are describing here, and that is de novo sequencing of unknown sequences of DNA, then, yeah, you would need read lengths of on that order. Q. And then the testimony we just read you testified that a reasonable time for deprotection of the 3'-O-allyl protecting group in SBS is an hour or less. That is what you testified, right? A. Well, I am hemmed and hawed a little bit because I think that is kind of a tough question. If an hour would have been all that is available,
2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20 21 22	line 22, the transcript reads: "Question: Does the rapid removal of a 3' protecting group relate to the eventual application of the SBS method?" And there was an objection. "Answer: So you are asking if the efficiency of removal depends required depends on the application? "Question: Sure. That is a better way of asking it. Thank you. "Answer: So that depends. I mean, so that depends. Are you talking about sequencing by synthesis applications? "Question: Yes. "Answer: Sure, but they all have to be efficient. There is a minimum that you are going to have to be. You are going to have to get 30 nucleotide read lengths minimum in a time that is not in a time that's feasible. "Question: What is a feasible time? "Answer: You know, that's a relative term. I mean, I threw out the idea of five hours being not reasonable. And I think that is probably right. What is a reasonable time? I don't know.	2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20 21 22	 but that would at least maybe be in the realm of doable." That is your testimony, correct? A. Yes. Q. Is it fair to say that your opinion is that SBS requires sequencing somewhere between 25 to 30 bases? A. I think it's my opinion that I'm not sure doable is a word, but, yes, I think depending on the specific application, and, again, getting back to the discussion that we had earlier, if you are doing the if your goal is the application that we are describing here, and that is de novo sequencing of unknown sequences of DNA, then, yeah, you would need read lengths of on that order. Well, I am hemmed and hawed a little bit because I think that is kind of a tough question. If an hour would have been all that is available,

	va Komesberg, Fil.D.		
1	Page 61 possible.	1	Page 62 think, you know, today, looking at what we have, I
2	Q. But your testimony was that an hour or		think an hour would not be great.
3	less. That was your testimony?	3	Q. But in terms of this testimony, that
4	MR. ZIMMERMAN: Objection.	4	wasn't today. That testimony was in the past. And
5	Mischaracterizes.	5	you were asked about sequencing by synthesis, and
6	THE WITNESS: Let me look at what I said.	6	your testimony was that an hour might not be great,
7	"I threw out the idea of five hours being not	7	but it would be doable. So my question is, it was
	Ũ	8	your testimony that in your opinion SBS required
8	reasonable, and I think that is probably right. And what time is reasonable? I don't know. An	9	that it occur in an hour or less?
9		-	
10	hour, that would not be great I don't think, but	10	MR. ZIMMERMAN: Objection. Compound.
11	that would at least maybe be in the realm of	11	BY MR. SCHWARTZ:
12	doable."	12	Q. That was your testimony, correct?
13	Yeah, so there's not I don't have an	13	MR. ZIMMERMAN: Objection. Compound.
14	answer, an exact answer to this question. People's	14	THE WITNESS: I don't believe that was my
15	standards would have adapted to what was required,	15	testimony. If it put it this way, if it was, it
16	but clearly faster is better.	16	shouldn't have been. But I don't believe it was.
17	BY MR. SCHWARTZ:	17	Could you direct me to where I said that it would
18	Q. I am just asking about your testimony.	18	have to be an hour or less.
19	And your testimony was that an hour might be	19	BY MR. SCHWARTZ:
20	doable.	20	Q. "What is a reasonable time? I don't
21	A. I certainly believe that an hour might be	21	know. An hour, that would not be great, I don't
22	doable.	22	think, but at least that would be in the realm of
23	Q. But you also said that an hour would not	23	doable."
24	be great.	24	A. If you ask me does it have to be an hour
25	A. Great is kind of a relative term. I	25	or faster to be a great sequencing by synthesis
	Page 63		Page 64
1	method, I think we could discuss what great means,	1	BY MR. SCHWARTZ:
2	but I think the point I was making was that an hour	2	Q. But you did testify what is a reasonable
3	is you certainly could have hoped faster, but I	3	time. I don't know, an hour. That would not be
4	don't think an hour would have precluded using it.	4	great.
5	It wouldn't necessarily have been great, but it	5	That was your testimony?
6	still it certainly would have been doable.	6	A. Yes. That is what I wrote, but, again, I
7	I think probably I mean, in reality,	7	don't believe I was I don't believe there's
8	10 hours would have been doable. It would have not	8	anything in that statement that defines an hour as
9	been great. It would have started to be pretty bad	9	some cutoff. I think it is exactly what it says.
10	because you just would not have been able to	10	I didn't know. An hour. I was speculating that
11	desequence your read lengths wouldn't have been	11	wouldn't be great, but doable.
12	limited by time, but would you still be able to do	12	Q. An hour would not be great?
13	it? Yes. Would you be able to do it in the	13	A. But it would be doable.
14	high-throughput way that Ju describes? No.	14	Q. So Tsien teaches that his SBS method
15	So it really comes down to what does	15	requires rapid and quantitative deblocking. A
16	high-throughput mean. And the problem is that	16	POSA and, again, a POSA in terms of the way you
17	scientists use these kinds of terms loosely. So	17	defined it in October 2000 understood that to
18	when I used when I said "I don't know. An hour,	18	mean that the 3' protecting group should be cleaved
19	that would not be great, I don't think, but that	19	quantitatively in what you consider to be around an
20	would at least be in the realm of doable," what I	20	hour?
21	was saying was that an hour, you know, that's	21	A. I would not be comfortable imposing my
22	doable. It certainly could have been better, but I	22	speculation of an hour being doable but not great.
23	don't believe I ever intended to define an hour as	23	I guess you could interpret that as saying my
23	any sort of cutoff.	23	reading of Tsien in a doable but not great way
24	-	24	would have suggested, I don't know, an hour as a
25	·//	20	would have suggested, rushr know, an hour as a

1 line 3	s, the transcript reads:	1	am talking about is the disulfide cleavage. Do you
2	"Question: Okay. And it's greater than		want me to take a minute to read this to get
	0 percent that you cite here in paragraph 58	3	context?
	e disulfide cleavage conditions that would	4	BY MR. SCHWARTZ:
5 provi	de an expectation that the disulfide cleavage	5	Q. You can read all you want to get context,
6 cond	itions, looking at cleavage of an OH protecting	6	but when you worked specifically in the portion
7 grou	o with greater than 90 percent efficiency."	7	that we just read referring to cleavage of a 3'-OH
8	There was an objection by counsel. Some	8	protecting group, when you looked at that, you
9 back	and forth between you and counsel. You	9	stated that, that was the question. Cleavage
10 ansv	vered, "I never suggested that greater than	10	conditions, getting cleavage of a 3'-OH protecting
11 90 p	ercent was sufficient. It's certainly	11	group, and your answer was that "95 percent would
12 nece	essary, but necessary is not necessarily	12	not be sufficient. Sufficiency is really something
13 suffi	cient. And 91 percent is greater than 90, but	13	approaching 100."
14 that	would not be sufficient. 95 percent would not	14	That was your testimony?
	ufficient. Sufficiency is really something	15	A. Well, I look and I see that what's
	oaching 100."	16	written is "and it's greater than 90 percent that
17	That was your testimony, correct?	17	you cite here in paragraph 58." This is what the
	. That is what is written, yes.	18	question as the disulfide cleavage conditions.
	. So it is your opinion that 95 percent	19	So I want to make sure I'm talking about not the
	ocking efficiency of the 3' protecting group is	20	disulfide cleavage.
	sufficient for SBS, correct?	21	Q. You are talking about the cleavage of a
22	MR. ZIMMERMAN: Objection.	22	3'-OH protecting group?
	haracterizes.	23	A. Can I take a moment?
24	THE WITNESS: I would have to read this.	24	Q. Okay. But do you see that you say that
	want me to, I am happy to. I believe what I	25	here in the testimony we just read?

	yu Komesberg, Fil.D.		
1	Page 69 A. Can I answer that in a second?	1	Page 70 greater than 90 percent efficiency."
2	Q. Sure.	2	That was your question. And your answer
3	A. It seems to me I'm talking about	3	was: "95 percent would not be sufficient.
4	disulfide cleavage.	4	Sufficiency is really something approaching 100."
5	Q. In relation to cleavage of the 3'-OH	5	A. The problem that I'm having here is that
6	protecting group, correct?	6	at the time, we were talking about and I don't
7	A. I think I'm talking about the efficiency	7	know if that's what we are talking about here, but
8	of disulfide cleavage.	8	one of the issues was simultaneous deprotection of
9	Q. Of the 3'-OH protecting group.	9	a nucleobase linker and the 3' blocking group. So
10	A. No.	10	I'm not sure I'm talking about conditions where you
11	Q. You're talking about cleavage conditions	11	get simultaneous cleavage.
12	could get cleavage of a 3'-OH protecting group.	12	Let me answer the question that I think
13	A. I'm sorry. I don't follow that. I know	13	you're getting at is that I think that we would
14	one of the issues that we were talking about in	14	need you would need for Tsien's sequencing by
15	this case was disulfide cleavage of a nucleobase.	15	synthesis method, I think the answer is applicable
16	Q. Okay, but let's look at the transcript	16	to that, that you would need something greater than
17	again. Starting at page 200, line 3.	17	95 percent for cleavage of the 3' hydrox group, if
18	"Question."	18	that's the question that you're asking.
19	Are you with me?	19	Q. Yes.
20	A. Yes.	20	A. Then I would agree with it. I want to
21	Q. "Okay. And it's greater than 90 percent	21	caveat that I'm not absolutely sure that that is
22	that the cite here in paragraph 58. It's the	22	specifically precisely what I am talking about
23	disulfide cleavage conditions that would provide an	23	here, but I am happy to answer that question.
24	expectation that the disulfide cleavage conditions	24	Q. Okay. And, in fact, you said that
25	could get cleavage of a 3'-OH protecting group with	25	sufficiency is really something approaching 100?
	Page 71		Page 72
1	A. The closer you get to 100, the better the	1	BY MR. SCHWARTZ:
2	method's going to be.	2	Q. Let's go back to Exhibit 2035, your
3	Q. Sufficiency is really something closer to	3	deposition transcript in the IPR2013-00517 case.
4	100, correct?	4	Please turn to page 156. Please draw your
5	MR. ZIMMERMAN: Objection. Asked and	5	attention to line 12. And starting at line 12, the
6	answered.	6	transcript reads:
7	BY MR. SCHWARTZ:	7	"Question: Would the efficiency also
8	Q. That is what you testified, right?	8	include the efficiency of incorporation of a
9	A. I think sufficiency is a relative term.	9	nucleotide; is that right?
10	Sufficient for what? But certainly you would have	10	"Answer: To the extent that the step
11	wanted to get as efficient as possible.	11	limited things, then sure. The nucleotide has to
12	Q. So do you agree with your testimony that	12	be efficiently incorporated."
13	sufficiency is something approaching 100?	13	That was your testimony, correct?
14	MR. ZIMMERMAN: Objection.	14	A. That was what was written, yes.
15	Mischaracterize.	15	Q. And it is your opinion that SBS requires
16	THE WITNESS: I wish to characterize that	16	efficient incorporation of the nucleotide by the
17	based on what sufficient what your application	17	polymerase, correct?
18	is and what sufficiency you need. It would depend	18	A. Well, I would like to caveat this in that
19	on read length. It would depend on things, all	19	efficiency is not a quantitative term; it is a
20	sorts of things. So you would have to give me a	20	relatively qualitative term, but it is certainly
21	set of conditions. I don't know the context that I	21	true.
22	testified here to know whether I would agree with	22	Q. And so to successfully practice SBS,
23	myself or not. I think it's clear that the closer	23	there must be both efficient incorporation of the
24	, .	24	nucleotide and deblocking efficiencies that are
25	///	25	efficient?
20			

	ya Romesberg, Ph.D.		University in the City of New York
1	Page 73 A. Yes.	1	Page 74 chain terminator?
1 2	Q. I'm putting in front of you another	2	"Answer: The sentence on page 3?"
3	document that has not yet been marked. I am	3	And there was an objection.
4	putting you in front of you, Dr. Romesberg, a	4	"Question: Yeah, we yes.
5	document entitled "Video Deposition of Floyd	5	"Answer: It says that they are not very
6	Romesberg Ph.D. in IPR2013-00266.	6	efficient chain terminators.
7	MR. SCHWARTZ: Court reporter, could you	7	"Question: And what does that mean to be
8	please mark this as Exhibit 2082?	8	a not very efficient chain terminator?
9	THE WITNESS: I'm sorry, so this is going	9	"Answer: That it is not a good
10	to be	10	substrate.
11	MR. SCHWARTZ: 2082.	11	"Question: And what do you mean by not a
12	THE WITNESS: In the future, this is	12	good substrate?
13	going to be today, this will be referred to as?	13	"Answer: It is not recognized well and
14	(Exhibit 2082 was marked for	14	incorporated by the polymerase."
15	identification.)	15	That was your testimony, correct?
16	BY MR. SCHWARTZ:	16	A. That is what is written, yes.
17	Q. 2082. Please turn to page 66. And	17	Q. And when you are referring to a chain
18	please draw your attention to line 17. And	18	terminator, you are referring to the 3' protecting
19	starting at line 17 the transcript reads:	19	group, correct?
20	"Question: Okay. So what is the	20	A. I would have to check. A 3' protected
21	concentration needed to reach high incorporation?	21	nucleotide is certainly a chain terminator.
22	"Answer: Of these substrates would be	22	Q. So a 3' protecting group that is not
23	one millimolar.	23	efficiently incorporated by a polymerase means that
24	"Question: Does that same sentence	24	it is not a good substrate for the polymerase,
25	mention whether or not it is it's an efficient	25	correct?
	Daga 75	<u> </u>	Daga 76

You write: "A person of ordinary skill in the art would have been well aware that incorporation of each sequential nucleotide and any related deprotection of a 3' protecting group or cleavage of a linker from the nucleotide in a DNA sequencing by synthesis process must be highly efficient to permit accurate sequencing." That's what you wrote, correct? A. That is what is written. Q. So each cycle of that SBS requires highly efficient nucleotide incorporation and highly efficient 3' deprotection, correct? A. Those words are qualitative but, sure, yes. And as I go on to do, you can simply do the math for anything that is not 100 and see what the ramifications are. Q. I will. We'll do some of that math later, since you invited it. Thank you. A. I'll invite triple integrals as well, if you would like to do some of that.
2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20 21 22 23	 A. Yes. Q. And the 3' protecting group that is not a good substrate means that it is not recognized well and it is not incorporated well by the polymerase, correct? A. I think I agree with if it is not incorporated well, it is not a good substrate. I think that's what you mean by incorporation is that it is taken as a substrate so, yes. MR. SCHWARTZ: And before it gets handed to you, maybe it would be easier, Court Reporter, this is a new exhibit, so could you mark this 2083. (Exhibit 2083 was marked for identification.) BY MR. SCHWARTZ: Q. Dr. Romesberg, I've put in front of you a document entitled "Substitute Declaration of Floyd Romesberg Ph.D. in Support of Patent Owner's Motion to Amend in IPR2013-00128." Please turn to page 37 of that exhibit. And I'm just going to ask you if that is your signature on that page? A. Yes, it is. 	2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20 21 22 23	 of ordinary skill"? A. I do. Q. 	yu Nomesberg, Fil.D.		
1	Page 77 the 3' protecting group, that would result in an	1	Page 78 for SBS, correct?
2	SBS system becoming out of phase, correct?	2	A. That was the answer to the question that
3	A. The sequencing read would lose phase,	3	I was answering.
4	yes.	4	Q. That's your opinion, right? That if more
5	Q. And when the sequencing I'm trying to	5	than half of the strands are out of phase after a
6	use your words. When the sequencing system loses	6	given number of cycles, that would not be
7	phase, it's no longer capable of generating	7	sufficient for SBS?
8	reliable sequencing information, correct?	8	A. I think there are ways that you can
9	A. Certainly once it's lost phase, that is	9	recover data, and where exactly it fails to be
10	correct.	10	recoverable, I'm not exactly sure. But this sounds
11	Q. Please go back to Exhibit 2080. That's	11	about right to me.
12	your deposition transcript in IPR2013-00128. And	12	Q. So you stand by your testimony?
13	please turn to page 252. Please draw your	13	
14	attention to line 6. And starting at line 6 the	14	a problem for sequencing.
15	transcript reads:	15	Q. And if more than half the strands were
16	"Question: If more than half of the	16	out of phase, you testified that would not be
17	strands were out of phase after a given number of	17	
18	cycles, would that be sufficient for SBS?	18	MR. ZIMMERMAN: Objection. Asked and
19	"Answer. No. No."	19	answered.
20	That was your testimony, correct?	20	THE WITNESS: I think there are methods
21	A. Yes.	21	that allow you to still sequence as you are losing
22	Q. It's okay. You can smile.	22	phase. I don't know how far currently people can
23	It is your opinion that if more than half	23	do that. I don't know that the specific software
24	the strands are out of phase after a given number	24	algorithms that allow you to do that as to how far
25	of SBS cycles, then that would not be sufficient	25	you can read into a lost phase sequence, a losing
	Page 79		Page 80
1	phase sequence. So I don't know exactly at what	1	MR. ZIMMERMAN: The answer is the answer.
2	point. I think that intuitively I would more or	2	You're going to make him sit here and punch in .93
3	less agree with what I said here, although I don't	3	ten times on a calculator?
4	know the exact value.	4	MR. SCHWARTZ: Yes, I am going to ask him
5	BY MR. SCHWARTZ:	5	to confirm that is 48.4 percent.
6	Q. I am going to take you up on your	6	MR. ZIMMERMAN: Take as much time as you
7	suggestion that we do some calculations.	7	need, Dr. Romesberg.
8	Does anybody have a piece of paper?	8	THE WITNESS: The answer I get is
9	A. You're going to make me do calculations?	9	48 percent.
10	Q. You bet.	10	BY MR. SCHWARTZ:
11	Let's assume that we have 93 percent	11	Q. And that means that 93 percent cleavage
12	efficiency of cleavage of the 3' protecting group	12	efficiency of the 3' protecting group, more than
13	at each cycle. After 10 cycles there would be .93	13	•
14	to the 10th of the sequence polynucleotide	14	
15	containing the correct sequence, correct?	15	A. Yes.
16	A. Um-hmm. Sorry, yes.	16	Q. Go back to Exhibit 1012, which is your
17	Q. And so I just want you to do that	17	declaration. Take your time.
18	calculation, .93	18	MR. ZIMMERMAN: Declaration in this case?
19	A. Can I use my calculator?	19	BY MR. SCHWARTZ:
20	Q. Absolutely.	20	Q. Okay, so we're at Exhibit 1012?
21	A. Actually, I am not sure my calculator	21	A. Yes.
22	has	22	Q. That's your declaration in IPR2018-00291,
23	Q. Mine doesn't either. You'll have to do	23	correct?
24	it 10 times.	24	
25	A. Okay.	25	Q. And please turn to page 16. Right above
1		1	

Flo	/d Romesberg, Ph.D.		University in the City of New York
4	Page 81	4	Page 82
1	paragraph 40 you have a header which reads: "It was known that the 3' capping group should be small."	1	Q. And you write: "Thus, a person of ordinary skill in the art would not have had an
3	Do you see that?	2	expectation that a small and removal protecting
4	A. I do.	4	group would also possess all of the listed
5	Q. Please keep that open, but I'd like you	5	properties of Ju and Tsien's protecting group."
6	to go back to Exhibit 2007. That is your	6	That is what you wrote, correct?
7	declaration in IPR2013-00517. And please go to	7	A. Yes.
8	page 32. Please draw your attention to paragraph	8	
	58, and please draw your attention to the second		Q. And, again, the Tsien reference that you're talking about is the same Tsien reference
9	sentence. And you write: "One skilled in the art	9 10	that we have been talking about in this case?
11	would have understood that the physical properties	11	A. It is.
12	underlying, one, nucleotide stability; two,	12	
13	polymerase recognition; and, three, reinitiation of	13	
14	DNA synthesis following deprotection are not	14	expectation that a small and removable protecting
15	necessarily related to; four, size; and, five, the	15	group would also possess all of the listed
16	chemical reversibility. A protecting group can	16	properties of the Tsien's protecting group,
17	have any subset of the aforementioned properties	17	
18	independent of the other properties."	18	A. Sure, yes. I assume that you're going to
19	And to save time, I'm not going to read	19	have me clarify this, but
20	the rest of paragraph 58 into the record, but I	20	Q. No, I'm just asking you that you heard
21	would ask that you turn to page 34 where you have a	21	the question. I could repeat it again. It is your
22	concluding sentence. It starts with "Thus, a	22	opinion that a person of ordinary skill in the art
23	person of ordinary skill in the art."	23	
24	Do you see that?	24	-
25	A. Yes.	25

And, again, Tsien's required properties for successfully practicing his SBS method include; one, the ability of a polymerase enzyme to accurately and efficiently incorporate the dNTP carrying the 3' blocking groups into the CD nature my mouth is dry. Let me read that again. "Tsien's required properties for successfully practicing his SBS method include; one, the ability of a polymerase enzyme to accurately and efficiently incorporate the dNTPs carrying the 3' blocking groups into the cDNA chain," correct? A. That is listed as a criteria for the successful use of the 3' blocking group, yes.	2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18	 deblocking stage, correct? A. That is listed as No. 3, yes. Q. It is your opinion that "a person of ordinary skill in the art" and, again, I'm using it in the way you do in October 2000 "would not have had an expectation that just because 3' blocking group is small, it would be expected to be accurately and efficiently incorporate the DTNPs carrying 3' blocking groups into the cDNA chain," correct? A. That is what I testified. Q. And it is your opinion that a person of ordinary skill in the art "would not have had an expectation that just because the 3' blocking group is small, it would be accurately and efficiently. A. That is what I testified. Q. And it is your opinion that a person of ordinary skill in the art "would not have had an expectation that just because the 3' blocking group is small, it would be expected that mild conditions for rapid and quantitative deblocking are available for that blocking group," correct? A. That is correct.
2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19	group? A. Yes. Q. Go back to Tsien, please. That is Exhibit 1013, back to pages 20 and 21. And, again, Tsien's required properties for successfully practicing his SBS method include; one, the ability of a polymerase enzyme to accurately and efficiently incorporate the dNTP carrying the 3' blocking groups into the CD nature my mouth is dry. Let me read that again. "Tsien's required properties for successfully practicing his SBS method include; one, the ability of a polymerase enzyme to accurately and efficiently incorporate the dNTPs carrying the 3' blocking groups into the cDNA chain," correct? A. That is listed as a criteria for the successful use of the 3' blocking group, yes. Q. And Tsien's required properties include;	2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19	 deblocking stage, correct? A. That is listed as No. 3, yes. Q. It is your opinion that "a person of ordinary skill in the art" and, again, I'm using it in the way you do in October 2000 "would not have had an expectation that just because 3' blocking group is small, it would be expected to be accurately and efficiently incorporate the DTNPs carrying 3' blocking groups into the cDNA chain," correct? A. That is what I testified. Q. And it is your opinion that a person of ordinary skill in the art "would not have had an expectation that just because the 3' blocking group is small, it would be expected that mild conditions for rapid and quantitative deblocking are available for that blocking group," correct? A. That is correct. Q. It is your opinion that a person of
2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20	group? A. Yes. Q. Go back to Tsien, please. That is Exhibit 1013, back to pages 20 and 21. And, again, Tsien's required properties for successfully practicing his SBS method include; one, the ability of a polymerase enzyme to accurately and efficiently incorporate the dNTP carrying the 3' blocking groups into the CD nature my mouth is dry. Let me read that again. "Tsien's required properties for successfully practicing his SBS method include; one, the ability of a polymerase enzyme to accurately and efficiently incorporate the dNTPs carrying the 3' blocking groups into the cDNA chain," correct? A. That is correct. Q. It is your opinion that a person of ordinary skill in the art would not have had an expectation that just because 3' blocking group is small, it would be expected that the polymerase enzyme is able to reinitiate cDNA synthesis following deprotection, correct?

1	Page 85 (Exhibit 1035 was previously marked for	1	Page 86 protecting groups, correct?
2	identification.)	2	A. Including conditions that under which
3	BY MR. SCHWARTZ:	3	you could get deprotection.
4	Q. I am going to put in front of you a	4	Q. But you relied on this paper to form your
5	different exhibit.	5	opinions about deprotection efficiencies. You say
6	I am putting in front of you Exhibit 1035	6	so in your declaration.
7	entitled "Cleavage of Allyl Ethers with Palladium	7	A. So I included two specific examples of
8	Carbon" by Boss and Scheffold. You relied on this	8	deprotection. This is a paper that I relied
9	paper to form your opinions about deprotection	9	particularly strongly on some aspects that
10		10	
11	A. Actually, no.	11	lead that I included in to form my opinion
12	Q. Okay. Why don't we take you back to your	12	
13	declaration that we looked at in IPR2018-00291.	13	
14	MR. ZIMMERMAN: 10 of 12. Go to page 64.	14	
15	THE WITNESS: On what page?	15	Q. As an additional question, none of the
16	BY MR. SCHWARTZ:	16	compounds in Boss are nucleotides or nucleosides,
17	Q. Page 32. And do you see where it says	17	•
18	"It was also known it's paragraph 64 "it was	18	A. They are not.
19	also known that allyl groups were generally	19	Q. And when you opined that Boss talked that
20	efficiently removed using palladium including under	20	
21	aqueous conditions," and you cite to Exhibit 1035,	21	referring to the first four entries in table one
22	which is Boss?	22	that reported yields of greater than 95 percent,
23	A. Yes.	23	
24	Q. So you relied on this paper to form your	24	
25	opinions about deprotection efficiencies of allyl	25	
	•p		
	Page 87		Page 88
1	five, six and seven, correct?	1	
1 2	five, six and seven, correct? A. That is correct.	1 2	represented the efficient deprotection so, yes.
2	A. That is correct.	2	represented the efficient deprotection so, yes. Q. Let me ask you a few questions about
2 3	 A. That is correct. Q. Is it fair to say that yields of 	2 3	represented the efficient deprotection so, yes.Q. Let me ask you a few questions about those compounds in Table 1. As an initial
2	 A. That is correct. Q. Is it fair to say that yields of 74 percent or 84 percent as shown for the last 	2 3 4	represented the efficient deprotection so, yes. Q. Let me ask you a few questions about those compounds in Table 1. As an initial question, the allyl protecting group on a
2 3 4 5	 A. That is correct. Q. Is it fair to say that yields of 74 percent or 84 percent as shown for the last three compounds in Table 1 would not be understood 	2 3 4 5	represented the efficient deprotection so, yes. Q. Let me ask you a few questions about those compounds in Table 1. As an initial question, the allyl protecting group on a nucleotide, 3'-OH. Let me go back.
2 3 4 5 6	 A. That is correct. Q. Is it fair to say that yields of 74 percent or 84 percent as shown for the last three compounds in Table 1 would not be understood to exhibit efficient removal of allyl groups? 	2 3 4	 represented the efficient deprotection so, yes. Q. Let me ask you a few questions about those compounds in Table 1. As an initial question, the allyl protecting group on a nucleotide, 3'-OH. Let me go back. I'm going to ask you about a few
2 3 4 5 6 7	 A. That is correct. Q. Is it fair to say that yields of 74 percent or 84 percent as shown for the last three compounds in Table 1 would not be understood to exhibit efficient removal of allyl groups? A. That's correct. 	2 3 4 5 6 7	represented the efficient deprotection so, yes. Q. Let me ask you a few questions about those compounds in Table 1. As an initial question, the allyl protecting group on a nucleotide, 3'-OH. Let me go back. I'm going to ask you about a few questions about the compounds in Table 1, okay?
2 3 4 5 6 7 8	 A. That is correct. Q. Is it fair to say that yields of 74 percent or 84 percent as shown for the last three compounds in Table 1 would not be understood to exhibit efficient removal of allyl groups? A. That's correct. Q. So in forming your opinion that Boss 	2 3 4 5 6 7 8	represented the efficient deprotection so, yes. Q. Let me ask you a few questions about those compounds in Table 1. As an initial question, the allyl protecting group on a nucleotide, 3'-OH. Let me go back. I'm going to ask you about a few questions about the compounds in Table 1, okay? And as an initial question, the allyl protecting

So in forming your opinion that Boss thought that the allyl groups were efficiently removed, you relied only on 8, 9, and 10 to form that opinion, correct? I'm sorry. You relied only on 4, 5, 6, and let me ask the question again because I messed it up. In forming your opinion that Boss thought that the allyl groups were efficiently removed, you did not take into account the yields of compounds 8, 9 or 10, correct? A. I would not say that I did not take them 	2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19	 represented the efficient deprotection so, yes. Q. Let me ask you a few questions about those compounds in Table 1. As an initial question, the allyl protecting group on a nucleotide, 3'-OH. Let me go back. I'm going to ask you about a few questions about the compounds in Table 1, okay? And as an initial question, the allyl protecting group on a nucleotide, 3'-OH, it's a secondary alcohol, correct? A. That is correct. Q. And the only secondary alcohol in Boss is compound 10, correct? A. That is correct. Q. Compound 4 is an aromatic alcohol, correct? A. That is correct. Q. And compounds five, six, seven, and nine are primary alcohols, correct?
2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20	 A. That is correct. Q. Is it fair to say that yields of 74 percent or 84 percent as shown for the last three compounds in Table 1 would not be understood to exhibit efficient removal of allyl groups? A. That's correct. Q. So in forming your opinion that Boss thought that the allyl groups were efficiently removed, you relied only on 8, 9, and 10 to form that opinion, correct? I'm sorry. You relied only on 4, 5, 6, and let me ask the question again because I messed it up. In forming your opinion that Boss thought that the allyl groups were efficiently removed, you did not take into account the yields of compounds 8, 9 or 10, correct? A. I would not say that I did not take them into account. Because I never said or meant to 	2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20	 represented the efficient deprotection so, yes. Q. Let me ask you a few questions about those compounds in Table 1. As an initial question, the allyl protecting group on a nucleotide, 3'-OH. Let me go back. I'm going to ask you about a few questions about the compounds in Table 1, okay? And as an initial question, the allyl protecting group on a nucleotide, 3'-OH, it's a secondary alcohol, correct? A. That is correct. Q. And the only secondary alcohol in Boss is compound 10, correct? A. That is correct. Q. Compound 4 is an aromatic alcohol, correct? A. That is correct. Q. And compounds five, six, seven, and nine are primary alcohols, correct? A. That is correct.
2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20 21	 A. That is correct. Q. Is it fair to say that yields of 74 percent or 84 percent as shown for the last three compounds in Table 1 would not be understood to exhibit efficient removal of allyl groups? A. That's correct. Q. So in forming your opinion that Boss thought that the allyl groups were efficiently removed, you relied only on 8, 9, and 10 to form that opinion, correct? I'm sorry. You relied only on 4, 5, 6, and let me ask the question again because I messed it up. In forming your opinion that Boss thought that the allyl groups were efficiently removed, you did not take into account the yields of compounds 8, 9 or 10, correct? A. I would not say that I did not take them into account. Because I never said or meant to imply that all groups could be efficiently removed 	2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20 21	 represented the efficient deprotection so, yes. Q. Let me ask you a few questions about those compounds in Table 1. As an initial question, the allyl protecting group on a nucleotide, 3'-OH. Let me go back. A. Maybe. It is certainly in an environment

	•		
1	Page 89 Q. And it's a primary alcohol?	1	Page 90 And if it to be clear, if it is not
2	A. It is a primary.	2	rate limiting that means that in a series of steps,
3	Q. So a person of ordinary skill in the art	3	if you have a step that is slower than everyone
4	understood that the structure that is most relevant	4	else, that step is called rate limiting, and that
5	in terms of the type of alcohol that is on the	5	is the step that is going to determine the rate of
6	protecting group is compound 10 to a nucleotide	6	the reaction. And if you are competing with other
7	3'-OH because they're both secondary alcohols,	7	things, that determines the efficiency of the
8	correct?	8	deprotection in this case.
9		9	These Palladium-catalyzed reactions are
10	A. I think that is hard to say. You have to understand the mechanism of these reactions. They	10	multi-step. The palladium has to bind. A
11	are very complex, and even to understand any one	11	nucleophile has to attack. You then have to do a
12	even today, it's a mechanistic study. What you're	12	rearrangement that involves displacement of that
13	getting at is whether or not the departure of the	13	leaving group. That step may or may not be rate
14	hydroxyl, that deprotection step, whether that	14	limiting, so the nature of the actual leaving group
15	weight limits the reaction. Sometimes it does;	15	may or may not identify commonalities between them.
16	sometimes it doesn't. And so sometimes the	16	Q. Is it true that in terms of the compounds
17	efficiency of the stability, what you're getting at	17	-
18		18	•
	is whether or not the stability of that leaving		alcohol is generally easier to cleave than an allyl
19	group would impinge will affect the reaction.	19	on a secondary alcohol?
20	And that is not known. It could, but it might not,	20 21	A. It might be, but it is not an absolute.
21	and so I think it is a little bit risky to say that		Q. And is it true that an allyl on a primary
22 23	that compound in particular represents the sort of yield, the sort of reaction that you would expect	22 23	alcohol is generally easier to cleave than a allyl on a secondary alcohol?
23	with a nucleotide, because that step is often not	23	A. If it's the rate limiting step, then,
25	rate limiting.	24	yes; if it is not, then, no. Let me rephrase that.
25	rate initiality.	25

A. It depends if that step is what limits the reaction. Q. Would you agree that all of Boss's compounds are much simpler in structure than nucleotide, particularly one that has a cleavable label on a base? A. Simpler? Q. I asked simpler in the sense that a nucleotide with cleavable label on the base contains additional functional groups, right? For example, amines on the base, amides in the linkers double bonds in the bases, all of those could also react with palladium under the conditions of Boss's method, correct? MR. ZIMMERMAN: Objection. Compound. BY MR. SCHWARTZ:
2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20	The actual step itself, what you said is correct. But whether you actually can even see that because whether that those differences contribute to the rate of the reaction and the efficiency for the reaction that you're looking at, that may make no difference at all. Because they're simply not rate determining. Q. Suppose in your hypothetical that the deprotection was the rate limiting step? A. If the no, to be clear, all of the steps are the deprotection step. That step is a complex series of steps, and if the specific step that evolves the accumulation of negative charge on the oxygen and its departure and cleavage of that bond, if that specific elementary step is rate limiting for the deprotection, then what you're saying would be you would then see those differences in the rates and the efficiencies for the deprotection. If that particular elementary step were	2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20	 aromatic alcohols that we're talking about here, generally speaking, the aromatic is easier to cleave than a secondary? A. It depends if that step is what limits the reaction. Q. Would you agree that all of Boss's compounds are much simpler in structure than nucleotide, particularly one that has a cleavable label on a base? A. Simpler? Q. I asked simpler in the sense that a nucleotide with cleavable label on the base contains additional functional groups, right? A. Again, I believe that is what is written. Q. Please go back to Tsien. To Tsien's paper, Exhibit 1013. A. I have it. Q. Please turn to page 38. On page 38 Tsien

	yu Komesberg, Fil.D.		
1	Page 101 Incorporation of Labeled Nucleotide Analogs Into	1	Page 102 that is what I wrote, so, yes.
2	DNA."	2	Q. A POSA understood that a nucleotide
3	Do you see that?	3	concentration of 200 micromolars is higher than
4	A. I do.	4	what typically would be expected for SBS, correct?
5	Q. You can read through this entire	5	A. Would a person of ordinary skill in the
6	paragraph if you need to in order to answer my	6	art thought 200 micromolar was higher than what?
7	question, but for now I'll just ask you to look at	7	Q. Well, when you were talking about
8	lines 14 through 19. And Tsien teaches the use of	8	moderate to low concentrations for SBS, would it be
9	three unlabeled 3' blocked deoxy nucleotide	9	higher than the moderate to low concentrations?
10	triphosphate dNTP analogs at a concentration of 1.5	10	A. 200 micromolar, no. That's probably in
11	micromolar each and one 3' blocked fluorescently	11	the moderate range. That is certainly not in the
12	labeled dNTP analog at a concentration of 30	12	low range.
13	micromolar for his SBS method, correct?	13	Q. But Tsien himself uses them at much lower
14	A. That would seem to be correct.	14	concentrations, correct?
15	Q. And Tsien's teaching of 1.5 to 30	15	A. That would seem to be the case here, yes.
16	micromolar concentrations excuse me of	16	(Exhibit 1016 was previously marked for
-		17	identification.)
17	nucleotides is consistent with your opinion that a	18	BY MR. SCHWARTZ:
18	person of ordinary skill in the art seeking to		
19	develop sequencing by synthesis methods would	19	Q. I am putting in front of you
20	recognize the need to use a nucleotide with a 3'	20	Exhibit 1016, a paper entitled "Termination of DNA
21	protecting group that could be incorporated by a	21	Synthesis by Novel 3' Modified Deoxyribonucleoside
22	polymerase with high fidelity of moderate to low	22	5'-triphosphates" by Metzker that was published in
23	concentrations, correct?	23	
24	A. I think that's just the question that you	24	This is the same Metzker 1994 paper you
25	asked earlier, and if that's the case, then, yes,	25	refer to in your declarations in these current IPRs,
1	Page 103	1	Page 104
2	A. That is correct.	1	which there's a lot of data, and then table two is
3	Q. Please look at the abstract. In the	2	sort of a summary of that. And so it is not exactly those assays, it is compiled from the
-			
1 4	abstract the authors write "Fight modified-dNTPs	3	
	abstract the authors write "Eight modified-dNTPs were synthesized and tested in two different	4	assays.

And please look at the second paragraph in that section that starts with "The key to the CRT Method." Do you see that? A. I do. Q. CRT means Cyclic Reversible Termination,

	Page 109		Page 110
1	Q. And the CRT method is another name for	1	A. Yes.
2	SBS, correct?	2	Q. So in Metzker's 2010 paper, he states
3	A. I would have to read that. It is not a	3	that the work he reported in his 1994 paper on
4	term that I use. In fact, I don't think it is a	4	terminators for Sanger sequencing provided the
5	particularly commonly used term. I'd have to see	5	basis for development of 3'-O reversible blocking
6	whether that refers to a specific step of SBS or if	6	groups for SBS, correct?
7	it refers to SBS overall, certainly is a step.	7	A. That is what it states.
8	Q. Please draw your attention to the section	8	Q. Is it fair to say that a reader of
9	that starts with "The use of Dideoxy Nucleotide."	9	Metzker's 1994 paper understood that the work that
10	Do you see that?	10	it was reported in the 1994 paper on terminators
11	A. Yes.	11	for Sanger sequencing provided the basis for his
12	Q. Metzker writes "The use of a Dideoxy	12	development of 3'-O reversible blocking groups for
13	nucleotide which acts as a chain terminator in	13	SBS?
14	Sanger sequencing provided the basis for the	14	A. If you're asking me if a person of
15	initial development of reversible blocking groups	15	ordinary skill in the art would have read the 1994
16	attached to the 3' end nucleotides."	16	paper and understood that Metzker was looking to
17	That is what Metzker wrote, correct?	17	develop reversible terminators for what he
18	A. That is what is written, yes.	18	called he didn't use the term sequencing by
19	Q. And Metzker refers to reference 19 and 20	19	synthesis, but for that, then, yes, I think a
20	support for that statement, correct?	20	reader I think he states that in the 1994 paper.
21	A. Yes.	21	Q. And is it fair to say the person of
22	Q. And would you please turn to the	22	ordinary skill in the art and, again, whenever I
23	references section and look at references 19 and	23	use POSA, I'm referring to POSA that you defined,
24	20. And reference 19 is the same Metzker 1994	24	goes back to October 2000 is it fair to say that
25	paper that we just looked at, correct?	25	a person of ordinary skill in the art understand
	paper that no just looksa al, correcti		a porcon or oralitary often in the art and orotana
1	Page 111	1	Page 112
	that a cleavable 3'-O protecting group that works	1	an inefficient terminator in SBS?
2	that a cleavable 3'-O protecting group that works for Sanger sequencing would be a good candidate for	2	an inefficient terminator in SBS?A. I want to be careful about how I answer
2 3	that a cleavable 3'-O protecting group that works for Sanger sequencing would be a good candidate for development of a blocking group for SBS?	2 3	an inefficient terminator in SBS?A. I want to be careful about how I answer this question, because inefficient is not a
2 3 4	that a cleavable 3'-O protecting group that works for Sanger sequencing would be a good candidate for development of a blocking group for SBS? A. But in this case it's really not useful to simply categorize something as interference means inefficient. And I'll tell you why. You can imagine a modification of A to C. The natural triphosphate that polymerases use as natural substrates. C is actually recognized less
2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19	 that a cleavable 3'-O protecting group that works for Sanger sequencing would be a good candidate for development of a blocking group for SBS? A. If it worked for Sanger sequencing, it would satisfy certain requirements that would also be required for sequencing by synthesis, so it would be a piece of data that a person of ordinary skill in the art would look to to form an opinion about sequencing by synthesis, yes. Q. And by the same token, is it fair to say that a POSA understood that 3' protecting group that inhibits polymerase activity in Sanger sequencing would also likely inhibit polymerase activity in SBS? A. I don't know what you mean by the word "inhibit." Q. The way that Metzker uses the word inhibit in his paper. A. No, I do not believe that that would be a 	2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19	 an inefficient terminator in SBS? A. I want to be careful about how I answer this question, because inefficient is not a particularly useful term here. Inefficient relative to what? Q. Well, you used the word inefficient all the time in what you A. And I believe I used it very qualitatively, and if you wish for me to define more specifically what I meant, I'm happy to look at any one of them if it's not clear by context, which I hope it would be. But in this case it's really not useful to simply categorize something as interference means inefficient. And I'll tell you why. You can imagine a modification of A to C. The natural triphosphate that polymerases use as natural substrates. C is actually recognized less efficiently than A. So would I call that
2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20	 that a cleavable 3'-O protecting group that works for Sanger sequencing would be a good candidate for development of a blocking group for SBS? A. If it worked for Sanger sequencing, it would satisfy certain requirements that would also be required for sequencing by synthesis, so it would be a piece of data that a person of ordinary skill in the art would look to to form an opinion about sequencing by synthesis, yes. Q. And by the same token, is it fair to say that a POSA understood that 3' protecting group that inhibits polymerase activity in Sanger sequencing would also likely inhibit polymerase activity in SBS? A. I don't know what you mean by the word "inhibit." Q. The way that Metzker uses the word inhibit in his paper. A. No, I do not believe that that would be a 	2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20	 an inefficient terminator in SBS? A. I want to be careful about how I answer this question, because inefficient is not a particularly useful term here. Inefficient relative to what? Q. Well, you used the word inefficient all the time in what you A. And I believe I used it very qualitatively, and if you wish for me to define more specifically what I meant, I'm happy to look at any one of them if it's not clear by context, which I hope it would be. But in this case it's really not useful to simply categorize something as interference means inefficient. And I'll tell you why. You can imagine a modification of A to C. The natural triphosphate that polymerases use as natural substrates. C is actually recognized less efficiently than A. So would I call that interference? No, I mean, it's a natural
2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20 21	 that a cleavable 3'-O protecting group that works for Sanger sequencing would be a good candidate for development of a blocking group for SBS? A. If it worked for Sanger sequencing, it would satisfy certain requirements that would also be required for sequencing by synthesis, so it would be a piece of data that a person of ordinary skill in the art would look to to form an opinion about sequencing by synthesis, yes. Q. And by the same token, is it fair to say that a POSA understood that 3' protecting group that inhibits polymerase activity in Sanger sequencing would also likely inhibit polymerase activity in SBS? A. I don't know what you mean by the word "inhibit." Q. The way that Metzker uses the word inhibit in his paper. A. No, I do not believe that that would be a necessary fatal flaw to moving forward with an analog. 	2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20 21	 an inefficient terminator in SBS? A. I want to be careful about how I answer this question, because inefficient is not a particularly useful term here. Inefficient relative to what? Q. Well, you used the word inefficient all the time in what you A. And I believe I used it very qualitatively, and if you wish for me to define more specifically what I meant, I'm happy to look at any one of them if it's not clear by context, which I hope it would be. But in this case it's really not useful to simply categorize something as interference means inefficient. And I'll tell you why. You can imagine a modification of A to C. The natural triphosphate that polymerases use as natural substrates. C is actually recognized less efficiently than A. So would I call that interference? No, I mean, it's a natural substrate. So I think the question that you're
2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20 21 22	 that a cleavable 3'-O protecting group that works for Sanger sequencing would be a good candidate for development of a blocking group for SBS? A. If it worked for Sanger sequencing, it would satisfy certain requirements that would also be required for sequencing by synthesis, so it would be a piece of data that a person of ordinary skill in the art would look to to form an opinion about sequencing by synthesis, yes. Q. And by the same token, is it fair to say that a POSA understood that 3' protecting group that inhibits polymerase activity in Sanger sequencing would also likely inhibit polymerase activity in SBS? A. I don't know what you mean by the word "inhibit." Q. The way that Metzker uses the word inhibit in his paper. A. No, I do not believe that that would be a necessary fatal flaw to moving forward with an analog. Q. Is it fair to say that a person of 	2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20 21 22	 an inefficient terminator in SBS? A. I want to be careful about how I answer this question, because inefficient is not a particularly useful term here. Inefficient relative to what? Q. Well, you used the word inefficient all the time in what you A. And I believe I used it very qualitatively, and if you wish for me to define more specifically what I meant, I'm happy to look at any one of them if it's not clear by context, which I hope it would be. The natural triphosphate that polymerases use as natural substrates. C is actually recognized less efficiently than A. So would I call that interference? No, I mean, it's a natural substrate. So I think the question that you're asking is at what point does interference preclude its use in sequencing by synthesis. And that's a

	yu Komesberg, Fil.D.		oniversity in the only of New Torr
1	to say that if it's not accepted as a substrate,	1	Page 114 were inhibitors in 1994?
2	then that is not going to be a good candidate for	2	A. I think if you looked at the 2010 paper
3	sequencing by synthesis.	3	and those compounds that he found inhibited in 1994
4	If it is recognized as well as a natural	4	weren't there, I think that you would have
5	substrate, that's awesome. People would be really	5	logically assumed that he got rid of them, he
6	excited, and they would want to move forward in the	6	didn't pursue them because they were not promising.
7	sequence by synthesis application. But there's a	7	Q. That is the basis for my question to you,
8	whole range of gray between the two. And at what	8	the same for inefficient. Those that he found to
9	point it becomes so inefficiently recognized that	9	be inefficient, he didn't move forward with those.
10	it could be not be used as a substrate, it's	10	He made that clear in the 2010 paper, correct?
11	certainly there's an area in there where that is	11	A. Are you asking me if this is the only
12	going to happen.	12	metric that he used to decide to move forward?
13	Q. I think maybe we're getting a little bit	13	Q. No, I am not asking you if it is the only
14	too complicated here. Basically, Metzker in 2010	14	metric.
15	pointed to the '94 paper and said that the '94	15	A. Certainly the efficiency of which it
16	paper provided the basis for his moving forward	16	caused termination as he described it in the '94
17	with protecting groups for SBS, correct?	17	paper would have been a component of his thought
18	A. Correct. That would be his moving	18	process, of his decision process to decide to what
19	forward with his opinions of what efficiency was	10	to with which in his process to decide what
20	required.	20	he was moving forward with.
20	Q. Okay. And in the 1994 paper he lists	20 21	Q. And those are reasonable decisions that
22	some nucleotides as being, for example, inhibitors	21	Metzker made. You said his thought process, but
22	of the polymerase. And I'm just saying would a	22	that would be is it reasonable for other people to
23	person understand that he didn't choose those to		
24	•	24 25	0
25	move forward with in his SBS studies because they	25	A. Everyone is going to weigh things
1	Page 115	4	Page 116
1	differently. I don't know exactly what he was	1	success, correct.
2	thinking. I don't know exactly what motivations he had to choose one or the other, but it was	2	Q. For DNA sequencing?A. That is correct.
3		3	
4	certainly a requirement that you have some	4	Q. If I refer to Vent (exo-) DNA polymerase,
5	recognition. He would have never moved forward	5	if I refer to that only as "Vent," will you
6	with something that has no recognition if he had	6	understand that I am referring to the Vent (exo-)
7	multiple things that had recognition, he may have	7	DNA polymerase in Metzker '94?
8	chosen one over the other for other reasons.	8	A. I will now.
9	Q. Let's go back to the allyl compound in	9	Q. Thank you.
10	Metzker, that's compound 3 as you said, right?	10	Metzker reports that the incorporation of
11	When I say "Metzker," I should have clarified that	11	the 3'-O-allyl dATP by the Vent polymerase was
12	Metzker 1994 since there may be several Metzkers on	12	incomplete at the final concentration of 250
13	the table.	13	micromolar, correct?
14	The 3'-O-allyl dATP had no incorporation	14	A. That is what he writes, yes.
15	with seven of the eight polymerases Metzker used in	15	Q. Please turn to page 4265. Please draw
16	the screening assay, correct?	16	your attention to the second paragraph on the right
17	A. That is what it is listed.	17	side of the page that starts with "Some notable
18	Q. Based on those results, a POSA understood	18	correlations."
19	that the 3'-O-allyl dATP would most likely not work	19	Do you see that?
20	for DNA sequencing with any of those seven	20	A. Ido.
21	polymerases, correct?	21	Q. And please look at the second sentence in
22	A. With those polymerases under the	22	that paragraph that starts with "First, the
23	condition employed, a POSA would have not been	23	protecting groups."
24	encouraged would not have had an expect would	24	Do you see that?
1	-		-
25		25	A. I do.

	yu Komesberg, Fil.D.		
1	Page 117 Q. And Metzker writes "First, the protecting	1	Page 118 Do you remember that?
2	groups containing ether linkages at the 3'	2	A. I do.
3	position, compounds 1, 3, 4, 7 and 8, were	3	Q. So is it fair to say that a person of
4	incorporated by some of the polymerases."	4	ordinary skill would expect that the 3'-O-allyl
5	That is what Metzker wrote, correct?	5	dATP could show even less incorporation with Vent
6	A. That is what he wrote.	6	if it was used at a 10-fold lower concentration
7	Q. So when Metzker writes that "Compound 3	7	that Tsien suggests?
8	was incorporated by some of the polymerases," the	8	A. That is right. But Tsien is suggesting a
9	reader of Metzker understands that the	9	different reaction than what Metzker is looking at,
10	incorporation Metzker refers to is incomplete	9 10	C
11		11	Q. I am not asking you to compare it, I'm
	incorporation with the Vent polymerase at 250		
12	micromolar, correct?	12	
13	A. Under the conditions that he employed,	13	,
14	yes. I'm sorry. Could you repeat that question?	14	
15	Q. So when Metzker writes that "Compound 3	15	
16	was incorporated by some of the polymerases," the	16	
17	reader of Metzker understands that the	17	, ,
18	incorporation Metzker refers to is incomplete	18	
19	incorporation with the Vent polymerase at 250	19	
20	micromolar, correct?	20	• •
21	A. Under the conditions that he explored	21	ordinary skill reasonably expect that the
22	that he is reporting, yes.	22	
23	Q. And earlier we looked at the Tsien	23	•
24	publication, and Tsien suggested using nucleotides	24	A. That is a physical law, yes.
25	in the low micromolar range, 1.5 to 30 micromolar.	25	Q. Please draw your attention to the last

Q. Now, please turn to Page 4261 of Metzker. And on the right side towards the bottom of page 4161 is a header entitled "Polymerases." Do you see that? A. I do. Q. And please draw your attention to the last sentence in that section. Metzker states that he got the Vent (exo-) DNA polymerase from New England Biolabs, correct?

	ya Komesberg, Ph.D.		University in the City of New For
	Page 125 the same Vent polymerase that is being discussed in the NER Sentember 1002 transprint, percent?	1	Page 126 your attention to the second sentence there which
2	the NEB September 1992 transcript, correct?	2	starts with "However, when fluorescent tagged."
3	A. I would have to look at this. As I said,	3	Do you see that?
_	I haven't looked at this before. This seems to be	4	A. I do.
5	a thermal cycle kit. It seems to use Vent. I	5	Q. And the transcript reads, "However, when
6	don't know what else is in the kit.	6	fluorescent-tagged dideoxy dNTPs are used in the
7	Q. I'm just asking you specifically the	7	sequencing method, the results can be mixed.
8	polymerase. It's the same polymerase that Metzker	8	Inefficient incorporation leads to different
9	says that he used?	9	intensities and peak heights on the resulting
10	 It seems to be the same polymerase. 	10	fluorograms, thus, the software has more difficulty
11	Q. Please go back to that exhibit, the	11	calling correct bases."
12	transcript, Exhibit 2084 and turn to the next page,	12	That is what the transcript states,
13	which is page 13.	13	right?
14	A. I'm sorry, which? 2084?	14	A. That is what is written, yes.
15	Q. Yes, page 13 is the next page in that.	15	Q. So the NEB transcript teaches that adding
16	Do you see that? And please draw your attention to	16	a fluorescent label to a dNTP results in
17	the middle column. And towards the bottom of the	17	inefficient incorporation by Vent polymerase,
18	middle column on page 13, there is a header which	18	
19	reads "Can the CircumVent kit be used for	19	A. They don't describe what they don't
20	sequencing templates to be used on automated	20	describe what the modifications are, but they say
21	fluorescent sequencers."	21	that inefficient incorporation can lead to
22	•	22	different intensities, yes.
23	A. Ido.	23	Q. When you add a fluorescent tag to the
24	Q. The NEB transcript answers that question	24	
25		25	A. Whatever fluorescent tag they are
	- · · ·		
1	Page 127 exploring, yes.	1	Page 128 the September 1992 transcript, and it teaches that
2	Q. And the transcript states that, that	2	fluorescently labeled nucleotides are inefficiently
3	inefficient incorporation leads to unreliable	3	incorporated by the same Vent polymerases Metzker
4	sequencing. That's what it says, right?	4	used in those experiments, correct?
5	MR. ZIMMERMAN: Objection.	5	A. The polymerase is the same, so given the
6	Mischaracterizes.	6	caveats that we just described, there can be some
7	THE WITNESS: The document says		-
			fluorophore link or modifications that reduce
8	inefficient incorporation leads to different	8	efficiency and complicate base calling, according
9	intensities and peak heights and more difficulty in	9	to NEB.
10	calling correct bases.	10	Q. Given that Metzker reports that the
11	BY MR. SCHWARTZ	11	3'-O-allyl dATP without a label is capable of
12	Q. So would you say that that is what	12	incomplete termination even at high nucleotide
13	results in unreliable sequencing?	13	concentrations, a person of ordinary skill in the
14	A. You have as much information about it as	14	art would expect that adding a fluorescent label to
15	I do. It says that difficulty in calling correct	15	that nucleotide could result in even less
16	bases.	16	termination activity with a Vent, correct?
17	Q. So please go back to Metzker 1994, and go	17	A. No, I disagree with that. He has not
18	back to table two. Metzker reports in table two	18	reported that the 3'-O-allyl is efficiently
19	that the unlabeled 3'-O-allyl nucleotide	19	incorporated.
20	incompletely terminated the sequencing reaction	20	Q. No, I said incomplete termination.
21	using Vent (exo-) DNA polymerase at 250 micromolars	21	A. That's inefficient incorporation. So he
22	of the nucleotide, correct?	22	has not reported that it, on its own, is
23	A. Under the conditions that he is using	23	inefficient at termination. As we just discussed,
24	here, that is what the document says.	24	there is 1 percent dATP in there.
25	O And we just looked at the NEP transprint	25	O But if you add a fluorocoant labol to
20	Q. And we just looked at the NEB transcript,	25	Q. But if you add a fluorescent label to

	d Romesberg, Ph.D.		University in the City of New York
1	Page 129 that nucleotide, it could result in even less	1	Page 130 that the O-allyl modified dAPT at a 100 fold more
	termination than Metzker reported at the 250	2	concentration than unmodified dAPT was competing
	micromolar, correct?	3	with the incorporation of that unmodified dAPT,
4	A. That is if if the added linker, as was	4	because you are getting some termination.
	the case apparently with the NEB report, if the	5	Q. Please go back to page 63 of Metzker '94.
6	added linker reduced the efficiency, then, yes,	6	And please look at the header "Terminator Screen"
	that would presumably, in an additive way, reduce	7	on the right side of the page, and please look at
	the termination. But, again, that is termination	8	the last sentence in that section that starts with
	in the presence of 1 percent dATP.	9	"Compounds 1, 8, 7."
9 10		9 10	
11	Q. Yeah, I'm just referring to Metzker's studies.	11	Do you see that? A. I do.
12		12	
	A. As am I, and his Metzker study has		Q. And Metzker writes "Compounds 1, 8, and 7
13	1 percent dATP in the mixture. No one would	13	showed specific termination and were further
14	sequence that way. No one would include dATP that	14	evaluated with respect to their
15	you're allowing to compete with your modified dATP	15	concentration-dependent effects."
16	where you're relying on the modified dAPT	16	That is what Metzker writes?
17		17	A. Correct.
18	Q. Right. So the fact that there is that	18	Q. A person of ordinary skill reading
19	there is unlabeled, unmodified dAPT there would be	19	Metzker understood that Metzker was advancing
20	understood to change the way that one would expect	20	compounds 1, 8, and 7 for further evaluation based
21	that nucleotide to behave if that unmodified dATP	21	on the screening tests that were reported at
	wasn't there, correct?	22	least based on the screening tests that were
23	A. A POSA would understand that having that	23	reported in table two, correct?
24	contaminating dAPT would dramatically change this,	24	A. At least, but that data was available to
25	yes. I guess just to be clear, a POSA would know	25	him when he made the choice to conduct further
	Page 131		Page 132
1	experiments concentration-dependent effects with 1,	1	Q. But he didn't move 3 forward?
2	8, and 7.	2	A. He did not move 3 forward.
3	Q. And a person reading a person of	3	Q. Metzker 1994 did not describe any
4	ordinary skill reading Metzker 1994 also understood	4	condition to remove the 3'-O-allyl group, correct?
5	that, based on those screening tests, Metzker did	5	A. That is correct.
6	not advance compound 3 for further evaluation,	6	Q. He certainly didn't describe any
7	correct?	7	condition to remove the 3'-O-allyl group that would
8	A. No. If you say based on at least those	8	be compatible with DNA synthesis, right or
9	screening effects, then I might agree with it.	9	DNA let me strike that.
10	Q. Let me change the question then.	10	Metzker 1994 did not describe any
11	A person of ordinary skill reading	11	condition to remove the 3'-O-allyl group that is
12	Metzker 1994 understood that at least based on the	12	compatible with DNA, correct?
13	screening test, Metzker did not advance compound 3	13	A. That is correct. And in fact, I think
14	for further evaluation?	14	that's probably related to why he did not move 3
15	A. So just to be clear, because I'm not sure	15	forward. Because he had the conditions to easily
16	I understand that turn of the phrase "at least	16	deprotect 7. He wasn't the chemist. So he
17	based on," he had that information available. He	17	probably didn't think about reactions to
18	certainly had other information available too. And	18	deprotect 3.
19	he chose to move forward with 1, 8, and 7, and what	19	Q. But he didn't describe any conditions?
20	you are getting at, obviously, is that he did not	20	A. That is right.
21	move 3 forward, and he had the data from his	21	Q. Six lines down in the abstract, which is
22	kinetic data that's reported in table two, and he	22	on page we read the first part of the abstract,
23	had a world of other data as well. And I don't	23	and I'm just going to read the next part of the
24	know what it was that fed into his choice to not	24	abstract there is a sentence that starts with
25	move 3 forward.	25	"3'-O 2-nitrobenzyl dAPT."

And Metzker writes "We have not identified a polymerase that will incorporate both 3'-O-allyl dATP, compound 1, and 3'-O-allyl dTTP, compound 8." That is what Metzker writes, correct?

	ya Romesberg, Ph.D.		University in the City of New York
1	Page 153 nucleotide analog with one particular base, it may	1	Page 154 analogs. I don't think the people would have known
2	or may not incorporate the similar analog	2	that is the case. I think they probably would have
3	containing a different base, correct?	3	expected it, and I think that is probably why he is
4	A. That is what is stated there. That is	4	calling it unexpected. He opens that paragraph by
5	the conclusion that is obvious in the conclusion	5	saying "several unexpected results." And so I
6	that is stated there.	6	think that is a bit of a surprise.
7	Q. So is it fair to say that a polymerase's	7	I would also point out, again, that all
8	ability to incorporate a nucleotide analog with one	8	of those O-methyl ATP reactions have dATP in there.
9	base doesn't provide an expectation that that	9	So some of those dashes may have been because they
10	polymerase will also incorporate a similar	10	were being outcompeted by the natural dAPT. So I
11	nucleotide with a different base?	11	think a POSA would have viewed that conclusion
12	A. I would probably have to disagree with	12	cautiously.
13	that. It certainly doesn't prove that it is the	13	Q. That is your speculation?
14	case, but I think a POSA would have expected it to	14	
15	be, because you are making a modification that is	15	speculation that those reactions had natural dAPT
16	distant from you are talking about the	16	in there and those would have officially
17	modification that change distant from the position	17	incorporated. Again, each of those reactions had
18	you are modifying and most people think that a	18	1 percent of the natural dAPT in there, and it is
19	Watson-Crick base pair is formed. It doesn't	19	not my speculation that a POSA would have
20	particularly matter if it's a GC, AT, TA, CG, so I	20	recognized that as an efficient substrate. That is
21	think most people would have dismissed that and	21	my definition of a POSA.
22	assumed that it was sort of general.	22	Q. But you will agree that Metzker's own
23	I mean it was very common for people to	23	studies demonstrate that just substituting a base
24	simply characterize one analog and sort of expect	24	with the same polymerase can result in completely
25	that to transfer, to be transferable to other	25	different results in terms of incorporation by the
	Page 155		Page 156
1	polymerase, correct?	1	and the methyl capped thymine nucleotide, a POŠA
1 2	polymerase, correct? A. No, I don't agree with that. I agree	2	and the methyl capped thymine nucleotide, a POŠA understood it was possible that for the allyl
	polymerase, correct?A. No, I don't agree with that. I agreethat Metzker states that.		and the methyl capped thymine nucleotide, a POŠA understood it was possible that for the allyl capped nucleotide, changing the base could change
2 3 4	 polymerase, correct? A. No, I don't agree with that. I agree that Metzker states that. Q. Yeah, I am asking you, Metzker says that, 	2 3 4	and the methyl capped thymine nucleotide, a POŠA understood it was possible that for the allyl capped nucleotide, changing the base could change the way that it would it be incorporated, if at
2 3 4 5	 polymerase, correct? A. No, I don't agree with that. I agree that Metzker states that. Q. Yeah, I am asking you, Metzker says that, correct? 	2 3 4 5	and the methyl capped thymine nucleotide, a POŠA understood it was possible that for the allyl capped nucleotide, changing the base could change the way that it would it be incorporated, if at all, by a polymerase?
2 3 4 5 6	 polymerase, correct? A. No, I don't agree with that. I agree that Metzker states that. Q. Yeah, I am asking you, Metzker says that, correct? A. Yes, I'm sorry. I thought you were 	2 3 4 5 6	and the methyl capped thymine nucleotide, a POŠA understood it was possible that for the allyl capped nucleotide, changing the base could change the way that it would it be incorporated, if at all, by a polymerase? A. A POSA would have understood that just as
2 3 4 5 6 7	 polymerase, correct? A. No, I don't agree with that. I agree that Metzker states that. Q. Yeah, I am asking you, Metzker says that, correct? A. Yes, I'm sorry. I thought you were saying I agree with the result. 	2 3 4 5 6 7	and the methyl capped thymine nucleotide, a POŠA understood it was possible that for the allyl capped nucleotide, changing the base could change the way that it would it be incorporated, if at all, by a polymerase? A. A POSA would have understood that just as a matter of his education. I don't think a POSA
2 3 4 5 6 7 8	 polymerase, correct? A. No, I don't agree with that. I agree that Metzker states that. Q. Yeah, I am asking you, Metzker says that, correct? A. Yes, I'm sorry. I thought you were saying I agree with the result. Q. No. I am saying you agree that Metzker 	2 3 4 5 6 7 8	and the methyl capped thymine nucleotide, a POŠA understood it was possible that for the allyl capped nucleotide, changing the base could change the way that it would it be incorporated, if at all, by a polymerase? A. A POSA would have understood that just as a matter of his education. I don't think a POSA would have interpreted I don't think a POSA
2 3 4 5 6 7 8 9	 polymerase, correct? A. No, I don't agree with that. I agree that Metzker states that. Q. Yeah, I am asking you, Metzker says that, correct? A. Yes, I'm sorry. I thought you were saying I agree with the result. Q. No. I am saying you agree that Metzker says that? 	2 3 4 5 6 7 8 9	and the methyl capped thymine nucleotide, a POŠA understood it was possible that for the allyl capped nucleotide, changing the base could change the way that it would it be incorporated, if at all, by a polymerase? A. A POSA would have understood that just as a matter of his education. I don't think a POSA would have interpreted I don't think a POSA would have been comfortable interpreting the
2 3 4 5 6 7 8 9 10	 polymerase, correct? A. No, I don't agree with that. I agree that Metzker states that. Q. Yeah, I am asking you, Metzker says that, correct? A. Yes, I'm sorry. I thought you were saying I agree with the result. Q. No. I am saying you agree that Metzker says that? A. Correct. 	2 3 4 5 6 7 8 9 10	and the methyl capped thymine nucleotide, a POŠA understood it was possible that for the allyl capped nucleotide, changing the base could change the way that it would it be incorporated, if at all, by a polymerase? A. A POSA would have understood that just as a matter of his education. I don't think a POSA would have interpreted I don't think a POSA would have been comfortable interpreting the results in this manuscript as evidence of that.
2 3 4 5 6 7 8 9 10 11	 polymerase, correct? A. No, I don't agree with that. I agree that Metzker states that. Q. Yeah, I am asking you, Metzker says that, correct? A. Yes, I'm sorry. I thought you were saying I agree with the result. Q. No. I am saying you agree that Metzker says that? A. Correct. Q. And, again, Metzker as a person of 	2 3 4 5 6 7 8 9 10 11	and the methyl capped thymine nucleotide, a POŠA understood it was possible that for the allyl capped nucleotide, changing the base could change the way that it would it be incorporated, if at all, by a polymerase? A. A POSA would have understood that just as a matter of his education. I don't think a POSA would have interpreted I don't think a POSA would have been comfortable interpreting the results in this manuscript as evidence of that. Because I think the POSA would have come into
2 3 4 5 6 7 8 9 10 11 12	 polymerase, correct? A. No, I don't agree with that. I agree that Metzker states that. Q. Yeah, I am asking you, Metzker says that, correct? A. Yes, I'm sorry. I thought you were saying I agree with the result. Q. No. I am saying you agree that Metzker says that? A. Correct. Q. And, again, Metzker as a person of ordinary skill, he understood his experiments that 	2 3 4 5 6 7 8 9 10 11 12	and the methyl capped thymine nucleotide, a POŠA understood it was possible that for the allyl capped nucleotide, changing the base could change the way that it would it be incorporated, if at all, by a polymerase? A. A POSA would have understood that just as a matter of his education. I don't think a POSA would have interpreted I don't think a POSA would have been comfortable interpreting the results in this manuscript as evidence of that. Because I think the POSA would have come into the would have approached that question from the
2 3 4 5 6 7 8 9 10 11 12 13	 polymerase, correct? A. No, I don't agree with that. I agree that Metzker states that. Q. Yeah, I am asking you, Metzker says that, correct? A. Yes, I'm sorry. I thought you were saying I agree with the result. Q. No. I am saying you agree that Metzker says that? A. Correct. Q. And, again, Metzker as a person of ordinary skill, he understood his experiments that there was no polymerase that he found that could 	2 3 4 5 6 7 8 9 10 11 12 13	and the methyl capped thymine nucleotide, a POŠA understood it was possible that for the allyl capped nucleotide, changing the base could change the way that it would it be incorporated, if at all, by a polymerase? A. A POSA would have understood that just as a matter of his education. I don't think a POSA would have interpreted I don't think a POSA would have been comfortable interpreting the results in this manuscript as evidence of that. Because I think the POSA would have come into the would have approached that question from the beginning saying, yeah, they're probably going to
2 3 4 5 6 7 8 9 10 11 12 13 14	 polymerase, correct? A. No, I don't agree with that. I agree that Metzker states that. Q. Yeah, I am asking you, Metzker says that, correct? A. Yes, I'm sorry. I thought you were saying I agree with the result. Q. No. I am saying you agree that Metzker says that? A. Correct. Q. And, again, Metzker as a person of ordinary skill, he understood his experiments that there was no polymerase that he found that could incorporate both the 3'-O-allyl dAPT and 	2 3 4 5 6 7 8 9 10 11 12 13 14	and the methyl capped thymine nucleotide, a POŠA understood it was possible that for the allyl capped nucleotide, changing the base could change the way that it would it be incorporated, if at all, by a polymerase? A. A POSA would have understood that just as a matter of his education. I don't think a POSA would have interpreted I don't think a POSA would have been comfortable interpreting the results in this manuscript as evidence of that. Because I think the POSA would have come into the would have approached that question from the beginning saying, yeah, they're probably going to be similar.
2 3 4 5 6 7 8 9 10 11 12 13 14 15	 polymerase, correct? A. No, I don't agree with that. I agree that Metzker states that. Q. Yeah, I am asking you, Metzker says that, correct? A. Yes, I'm sorry. I thought you were saying I agree with the result. Q. No. I am saying you agree that Metzker says that? A. Correct. Q. And, again, Metzker as a person of ordinary skill, he understood his experiments that there was no polymerase that he found that could incorporate both the 3'-O-allyl dAPT and 3'-O-methyl dTTP. That is what he says. 	2 3 4 5 6 7 8 9 10 11 12 13 14 15 	and the methyl capped thymine nucleotide, a POŠA understood it was possible that for the allyl capped nucleotide, changing the base could change the way that it would it be incorporated, if at all, by a polymerase? A. A POSA would have understood that just as a matter of his education. I don't think a POSA would have interpreted I don't think a POSA would have been comfortable interpreting the results in this manuscript as evidence of that. Because I think the POSA would have come into the would have approached that question from the beginning saying, yeah, they're probably going to be similar. And then he would have seen Metzker's
2 3 4 5 6 7 8 9 10 11 12 13 14 15 16	 polymerase, correct? A. No, I don't agree with that. I agree that Metzker states that. Q. Yeah, I am asking you, Metzker says that, correct? A. Yes, I'm sorry. I thought you were saying I agree with the result. Q. No. I am saying you agree that Metzker says that? A. Correct. Q. And, again, Metzker as a person of ordinary skill, he understood his experiments that there was no polymerase that he found that could incorporate both the 3'-O-allyl dAPT and 3'-O-methyl dTTP. That is what he says. A. That is what he says. 	2 3 4 5 6 7 8 9 10 11 12 13 14 15 16	and the methyl capped thymine nucleotide, a POŠA understood it was possible that for the allyl capped nucleotide, changing the base could change the way that it would it be incorporated, if at all, by a polymerase? A. A POSA would have understood that just as a matter of his education. I don't think a POSA would have interpreted I don't think a POSA would have been comfortable interpreting the results in this manuscript as evidence of that. Because I think the POSA would have come into the would have approached that question from the beginning saying, yeah, they're probably going to be similar. And then he would have seen Metzker's conclusion, and he would have said, well, Metzker
2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17	 polymerase, correct? A. No, I don't agree with that. I agree that Metzker states that. Q. Yeah, I am asking you, Metzker says that, correct? A. Yes, I'm sorry. I thought you were saying I agree with the result. Q. No. I am saying you agree that Metzker says that? A. Correct. Q. And, again, Metzker as a person of ordinary skill, he understood his experiments that there was no polymerase that he found that could incorporate both the 3'-O-allyl dAPT and 3'-O-methyl dTTP. That is what he says. A. That is what he says. Q. As a POSA. 	2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 16	and the methyl capped thymine nucleotide, a POŠA understood it was possible that for the allyl capped nucleotide, changing the base could change the way that it would it be incorporated, if at all, by a polymerase? A. A POSA would have understood that just as a matter of his education. I don't think a POSA would have interpreted I don't think a POSA would have been comfortable interpreting the results in this manuscript as evidence of that. Because I think the POSA would have come into the would have approached that question from the beginning saying, yeah, they're probably going to be similar. And then he would have seen Metzker's conclusion, and he would have said, well, Metzker seems to think otherwise, there is 1 percent dAPT
2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18	 polymerase, correct? A. No, I don't agree with that. I agree that Metzker states that. Q. Yeah, I am asking you, Metzker says that, correct? A. Yes, I'm sorry. I thought you were saying I agree with the result. Q. No. I am saying you agree that Metzker says that? A. Correct. Q. And, again, Metzker as a person of ordinary skill, he understood his experiments that there was no polymerase that he found that could incorporate both the 3'-O-allyl dAPT and 3'-O-methyl dTTP. That is what he says. A. That is what he says. Q. As a POSA. So going back to the allyl capped 	2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18	and the methyl capped thymine nucleotide, a POŠA understood it was possible that for the allyl capped nucleotide, changing the base could change the way that it would it be incorporated, if at all, by a polymerase? A. A POSA would have understood that just as a matter of his education. I don't think a POSA would have interpreted I don't think a POSA would have been comfortable interpreting the results in this manuscript as evidence of that. Because I think the POSA would have come into the would have approached that question from the beginning saying, yeah, they're probably going to be similar. And then he would have said, well, Metzker seems to think otherwise, there is 1 percent dAPT in these. So I think that a POSA would have
2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19	 polymerase, correct? A. No, I don't agree with that. I agree that Metzker states that. Q. Yeah, I am asking you, Metzker says that, correct? A. Yes, I'm sorry. I thought you were saying I agree with the result. Q. No. I am saying you agree that Metzker says that? A. Correct. Q. And, again, Metzker as a person of ordinary skill, he understood his experiments that there was no polymerase that he found that could incorporate both the 3'-O-allyl dAPT and 3'-O-methyl dTTP. That is what he says. A. That is what he says. Q. As a POSA. So going back to the allyl capped nucleotides, the only allyl capped nucleotide that 	2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19	and the methyl capped thymine nucleotide, a POŠA understood it was possible that for the allyl capped nucleotide, changing the base could change the way that it would it be incorporated, if at all, by a polymerase? A. A POSA would have understood that just as a matter of his education. I don't think a POSA would have interpreted I don't think a POSA would have been comfortable interpreting the results in this manuscript as evidence of that. Because I think the POSA would have come into the would have approached that question from the beginning saying, yeah, they're probably going to be similar. And then he would have seen Metzker's conclusion, and he would have said, well, Metzker seems to think otherwise, there is 1 percent dAPT in these. So I think that a POSA would have been would have viewed that skeptically.
2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20	 polymerase, correct? A. No, I don't agree with that. I agree that Metzker states that. Q. Yeah, I am asking you, Metzker says that, correct? A. Yes, I'm sorry. I thought you were saying I agree with the result. Q. No. I am saying you agree that Metzker says that? A. Correct. Q. And, again, Metzker as a person of ordinary skill, he understood his experiments that there was no polymerase that he found that could incorporate both the 3'-O-allyl dAPT and 3'-O-methyl dTTP. That is what he says. A. That is what he says. Q. As a POSA. So going back to the allyl capped nucleotides, the only allyl capped nucleotide that 	2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20	and the methyl capped thymine nucleotide, a POŠA understood it was possible that for the allyl capped nucleotide, changing the base could change the way that it would it be incorporated, if at all, by a polymerase? A. A POSA would have understood that just as a matter of his education. I don't think a POSA would have interpreted I don't think a POSA would have been comfortable interpreting the results in this manuscript as evidence of that. Because I think the POSA would have come into the would have approached that question from the beginning saying, yeah, they're probably going to be similar. And then he would have seen Metzker's conclusion, and he would have said, well, Metzker seems to think otherwise, there is 1 percent dAPT in these. So I think that a POSA would have been would have viewed that skeptically. (Exhibit 1036 was previously marked for
2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20 21	 polymerase, correct? A. No, I don't agree with that. I agree that Metzker states that. Q. Yeah, I am asking you, Metzker says that, correct? A. Yes, I'm sorry. I thought you were saying I agree with the result. Q. No. I am saying you agree that Metzker says that? A. Correct. Q. And, again, Metzker as a person of ordinary skill, he understood his experiments that there was no polymerase that he found that could incorporate both the 3'-O-allyl dAPT and 3'-O-methyl dTTP. That is what he says. A. That is what he says. Q. As a POSA. So going back to the allyl capped nucleotides, the only allyl capped nucleotide that was tested by Metzker is the adenine, correct? A. That is correct. 	2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20 21	and the methyl capped thymine nucleotide, a POŠA understood it was possible that for the allyl capped nucleotide, changing the base could change the way that it would it be incorporated, if at all, by a polymerase? A. A POSA would have understood that just as a matter of his education. I don't think a POSA would have interpreted I don't think a POSA would have been comfortable interpreting the results in this manuscript as evidence of that. Because I think the POSA would have come into the would have approached that question from the beginning saying, yeah, they're probably going to be similar. 1	Page 157 Tertiary Alcohol of 3-C-Methyl-N-Acetyllactosamine	1	Page 158 Q. Now the scheme that is used to deprotect
2		2	the allyl in Qian is not performed in aqueous
3	by Qian that was published in 1998.	3	media, correct?
4	This is the same Qian paper that you	4	A. It is performed in methanol.
5	referred to in these IPRs, correct?	5	Q. And you agree that protecting groups for
6	A. That is correct, Qian.	6	use is SBS must be removable under aqueous
7	Q. Please turn to Page 2185. Please draw	7	conditions, correct?
8	your attention to scheme two. You refer to scheme	8	A. That is correct.
9	two to form your opinion that the allyl protecting	9	Q. And you just said this one, instead of
10	group is removed quantitatively, correct?	10	aqueous conditions, uses methanol?
11	A. Yes, that is correct.	11	A. That is what's reported.
12	Q. And the compounds in Qian are not	12	Q. And you testified earlier that methanol
13	nucleotides or nucleosides, correct?	13	is a DNA denaturance?
14	A. That is correct. They are sugars, which	14	A. Neat methanol is a DNA denaturance. As
15	is closely related to a the sugar of the	15	long as to the extent that it dehydrates DNA, it
16	nucleotide of which the 3'-O-hydroxyl group is part	16	is a denaturer. There is no reason these reactions
17	of, meaning that that unit is a sugar. And these	17	could haven't been performed with added water. The
18	are sugars.	18	reaction scheme they're showing is absolutely
19	Q. These are disaccharides, correct?	19	compatible with water.
20	A. They're two sugars attached.	20	Q. So you are suggesting that somebody could
21	Q. Just so that we are understand each	21	modify this reaction scheme, is that what you are
22	other, a nucleotide used for sequencing does not	22	suggesting?
23	have a disaccharide, does it?	23	A. I am suggesting it would have been
24	A. No, but a nucleotide used for sequencing	24	obvious to a POSA that he would have had the
25	has a sugar unit. These have sugar units.	25	flexibility and had high expectation of success
1	Page 159 that this would have been equivalent in water or in	1	Page 160 he skipped several sentences.
2	water/methanol mixtures, if not pure water.	2	MR. SCHWARTZ: I did.
3	Q. Earlier we looked at your testimony in	3	BY MR. SCHWARTZ:
4	IPR2013-00517. It was actually your declaration	4	Q. "But would have also considered this
5	that was Exhibit 2016. Can you go back to that?	5	method of azido-methyl protecting group removal to
6	A. What is the number?	6	be incompatible with Tsien's and Ju's requirements
7	Q. 2007.	7	for sequencing by synthesis."
8	A. I have it.	8	Now, your position in those IPRs was that
9	Q. And if you go back to paragraph 46. You	9	the reaction and conditions in the references that
10	write in paragraph 46: "Furthermore, the conditions	10	IBS's expert was using for the deprotection of the
11	used by Loubinoux in table two would not be	11	3' protecting group, the azido-methyl protecting
12	compatible with Tsien's and Ju's sequencing by	12	group is not compatible with Tsien's SBS method.
13	synthesis methods. The experiment in table two	13	You criticized the other expert's use of a method
14	that achieved 95 percent yield used THF as a	14	that was not compatible with SBS, correct?
15	solvent, which as with pyrimidine, was a known DNA	15	A. I appear to be saying that it would not
16	denaturant," it cites to a Lee paper, "Therefore,	16	have been compatible.
17	one of ordinary skill would not have viewed table	17	Q. You criticized that paper that the other
18	two of Loubinoux as teaching that yields vary	18	expert was using because you viewed that paper as
19	widely" I'm sorry. "Therefore, one of ordinary	19	being incompatible with SBS, correct?
20	skill would not only have viewed table two of	20	A. Well, I think I was concluding that it
1	Loubinoux as teaching that yields vary widely, but	21	was incompatible, but I hope I didn't criticize the
21		22	expert.
21 22	would also have considered this method of		
	would also have considered this method of azido-methyl protecting group removal to be	23	Q. I am not saying you criticized the
22		23 24	Q. I am not saying you criticized the expert. I'm saying you criticized the expert's use
22 23	azido-methyl protecting group removal to be

And the reaction that is used to deprotect the allyl for compound 7 uses 10 mils of methanol and two mils of water, correct? A. That is correct. Q. We can calculate the concentration of
13 14 15 16 17 18 19 20 21	but to this reference. Because it is regarding the mild conditions required for compatibility with DNA sequencing by synthesis this really has everything. It is a sugar, which is very close to a nucleotide. It is the O-allyl, it's quantitative, it's less than two hours to room temperature. It's methanol that people understood that that would not be a limitation, that you could people would have had	 14 15 16 17 18 19 20 21 	 greater than 95 percent, correct? A. That is correct. Q. And the reaction that is used to deprotect the allyl for compound 7 uses 10 mils of methanol and two mils of water, correct? A. That is correct. Q. We can calculate the concentration of methanol in that mixture, can't we?
13 14 15 16 17 18 19 20 21 22	but to this reference. Because it is regarding the mild conditions required for compatibility with DNA sequencing by synthesis this really has everything. It is a sugar, which is very close to a nucleotide. It is the O-allyl, it's quantitative, it's less than two hours to room temperature. It's methanol that people understood that that would not be a limitation, that you could people would have had expectation this would have worked in water.	 14 15 16 17 18 19 20 21 22 	 greater than 95 percent, correct? A. That is correct. Q. And the reaction that is used to deprotect the allyl for compound 7 uses 10 mils of methanol and two mils of water, correct? A. That is correct. Q. We can calculate the concentration of methanol in that mixture, can't we? A. That is possible, correct, yes.
13 14 15 16 17 18 19 20 21 22 23	but to this reference. Because it is regarding the mild conditions required for compatibility with DNA sequencing by synthesis this really has everything. It is a sugar, which is very close to a nucleotide. It is the O-allyl, it's quantitative, it's less than two hours to room temperature. It's methanol that people understood that that would not be a limitation, that you could people would have had expectation this would have worked in water. Q. But this reference that you are relying	 14 15 16 17 18 19 20 21 22 23 	 greater than 95 percent, correct? A. That is correct. Q. And the reaction that is used to deprotect the allyl for compound 7 uses 10 mils of methanol and two mils of water, correct? A. That is correct. Q. We can calculate the concentration of methanol in that mixture, can't we? A. That is possible, correct, yes. Q. I'm going to walk you through a calculation. So I'm going to ask you, may I have

	a Romesberg, Ph.D.		
4	Page 165	4	Page 166
1	A. I still have the former one you gave me	1	And you can have a calculator.
2	with very little written on it if that saves you	2	A. Look, as easy as this is, it is
3	the trouble.	3	surprisingly tricky to do on your feet in front of
4	Q. Did you write anything on that paper?	4	when 10 people are watching you. If you tell me
5	We'll keep that paper, because I will	5	that is correct, I'll believe it. It sounds about
6	mark it at the end. And so we're going to walk	6	right. If you really want me to sit here and do
7	through this calculation for the concentration of	7	that freshman chemistry, I'll do it.
8	methanol in that reaction, okay? And I will	8	Q. Yeah, let's do it. 7.9
9	provide you with some information which I will	9	A. All right. I will do it.
10	represent to you is accurate, and your counsel, if	10	Q. 7.9 grams, when the molecular weight of
11	they think it is inaccurate, has a chance to take	11	32 grams per mole is .25 moles, correct?
12	that up with you on your redirect.	12	A. Is 7.9 divided by 32.
13	So why don't you write down that the	13	Q. And it's .25 grams.
14	molecular weight of methanol is 32 grams per mil.	14	A. You want me to check that?
15	l'm sorry, 32 grams per mole.	15	Q. Ido.
16	And the density of methanol is .79 grams	16	A. Okay. I will check that. 7.9 divided by
17	per mil. So 10 mils of methanol weighs 7.9 grams,	17	
18	correct?	18	
19	MR. ZIMMERMAN: Do you need a calculator,	19	
20	Dr. Romesberg?	20	
21	THE WITNESS: No. 10 mils would be	21	mixture of 10 mils of methanol and two mils of
22	7.9 grams, that's correct.	22	water, that is to say you've got a total of .012
23	BY MR. SCHWARTZ:	23	liters of solution, would be .25 moles over .012
24	Q. The 7.9 grams, again, the molecular	23 24	
24	weight of 32 grams per mole is .25 moles, correct?	24 25	•
25	weight of 52 grants per mole is .25 moles, correct?	25	A. That sounds right.
	Page 167		Page 168
1	Q. Would you do that calculation, .25 over	1	in freshman chemistry in 1984, so I guess I trust
2	Q. Would you do that calculation, .25 over 0.12?	2	in freshman chemistry in 1984, so I guess I trust my calculation. You got the same result, so I
2 3	Q. Would you do that calculation, .25 over 0.12? MR. ZIMMERMAN: 0.012.	2 3	in freshman chemistry in 1984, so I guess I trust my calculation. You got the same result, so I assume it is probably right. But if I were if I
2 3 4	Q. Would you do that calculation, .25 over 0.12? MR. ZIMMERMAN: 0.012. BY MR. SCHWARTZ	2 3 4	in freshman chemistry in 1984, so I guess I trust my calculation. You got the same result, so I assume it is probably right. But if I were if I were you, I would have done this carefully, made
2 3	 Q. Would you do that calculation, .25 over 0.12? MR. ZIMMERMAN: 0.012. BY MR. SCHWARTZ Q. 0.012. 	2 3 4 5	in freshman chemistry in 1984, so I guess I trust my calculation. You got the same result, so I assume it is probably right. But if I were if I were you, I would have done this carefully, made sure it is right, and presented me the data.
2 3 4	 Q. Would you do that calculation, .25 over 0.12? MR. ZIMMERMAN: 0.012. BY MR. SCHWARTZ Q. 0.012. A. 0.012 liters per mole is what you are 	2 3 4 5 6	in freshman chemistry in 1984, so I guess I trust my calculation. You got the same result, so I assume it is probably right. But if I were if I were you, I would have done this carefully, made sure it is right, and presented me the data. Q. But your calculation
2 3 4 5	 Q. Would you do that calculation, .25 over 0.12? MR. ZIMMERMAN: 0.012. BY MR. SCHWARTZ Q. 0.012. A. 0.012 liters per mole is what you are saying? 	2 3 4 5	 in freshman chemistry in 1984, so I guess I trust my calculation. You got the same result, so I assume it is probably right. But if I were if I were you, I would have done this carefully, made sure it is right, and presented me the data. Q. But your calculation A. If you want me to go through it and come
2 3 4 5 6	 Q. Would you do that calculation, .25 over 0.12? MR. ZIMMERMAN: 0.012. BY MR. SCHWARTZ Q. 0.012. A. 0.012 liters per mole is what you are 	2 3 4 5 6	 in freshman chemistry in 1984, so I guess I trust my calculation. You got the same result, so I assume it is probably right. But if I were if I were you, I would have done this carefully, made sure it is right, and presented me the data. Q. But your calculation A. If you want me to go through it and come up with it, I did it, and that is what I got. So
2 3 4 5 6 7	 Q. Would you do that calculation, .25 over 0.12? MR. ZIMMERMAN: 0.012. BY MR. SCHWARTZ Q. 0.012. A. 0.012 liters per mole is what you are saying? Q. Mm-hmm. A. So it's not divided by. 	2 3 4 5 6 7	 in freshman chemistry in 1984, so I guess I trust my calculation. You got the same result, so I assume it is probably right. But if I were if I were you, I would have done this carefully, made sure it is right, and presented me the data. Q. But your calculation A. If you want me to go through it and come up with it, I did it, and that is what I got. So you can believe that for what it is. I hope I
2 3 4 5 6 7 8	 Q. Would you do that calculation, .25 over 0.12? MR. ZIMMERMAN: 0.012. BY MR. SCHWARTZ Q. 0.012. A. 0.012 liters per mole is what you are saying? Q. Mm-hmm. 	2 3 4 5 6 7 8	 in freshman chemistry in 1984, so I guess I trust my calculation. You got the same result, so I assume it is probably right. But if I were if I were you, I would have done this carefully, made sure it is right, and presented me the data. Q. But your calculation A. If you want me to go through it and come up with it, I did it, and that is what I got. So you can believe that for what it is. I hope I didn't make a mistake.
2 3 4 5 6 7 8 9	 Q. Would you do that calculation, .25 over 0.12? MR. ZIMMERMAN: 0.012. BY MR. SCHWARTZ Q. 0.012. A. 0.012 liters per mole is what you are saying? Q. Mm-hmm. A. So it's not divided by. 	2 3 4 5 6 7 8 9	 in freshman chemistry in 1984, so I guess I trust my calculation. You got the same result, so I assume it is probably right. But if I were if I were you, I would have done this carefully, made sure it is right, and presented me the data. Q. But your calculation A. If you want me to go through it and come up with it, I did it, and that is what I got. So you can believe that for what it is. I hope I
2 3 4 5 6 7 8 9 10	 Q. Would you do that calculation, .25 over 0.12? MR. ZIMMERMAN: 0.012. BY MR. SCHWARTZ Q. 0.012. A. 0.012 liters per mole is what you are saying? Q. Mm-hmm. A. So it's not divided by. Q. It's .25 moles over 12 mils, which is 	2 3 4 5 6 7 8 9 10	 in freshman chemistry in 1984, so I guess I trust my calculation. You got the same result, so I assume it is probably right. But if I were if I were you, I would have done this carefully, made sure it is right, and presented me the data. Q. But your calculation A. If you want me to go through it and come up with it, I did it, and that is what I got. So you can believe that for what it is. I hope I didn't make a mistake.
2 3 4 5 6 7 8 9 10 11	 Q. Would you do that calculation, .25 over 0.12? MR. ZIMMERMAN: 0.012. BY MR. SCHWARTZ Q. 0.012. A. 0.012 liters per mole is what you are saying? Q. Mm-hmm. A. So it's not divided by. Q. It's .25 moles over 12 mils, which is 0.012 litters, right? 	2 3 4 5 6 7 8 9 10 11	 in freshman chemistry in 1984, so I guess I trust my calculation. You got the same result, so I assume it is probably right. But if I were if I were you, I would have done this carefully, made sure it is right, and presented me the data. Q. But your calculation A. If you want me to go through it and come up with it, I did it, and that is what I got. So you can believe that for what it is. I hope I didn't make a mistake. Q. And you got 20.8 molar?
2 3 4 5 6 7 8 9 10 11 12	 Q. Would you do that calculation, .25 over 0.12? MR. ZIMMERMAN: 0.012. BY MR. SCHWARTZ Q. 0.012. A. 0.012 liters per mole is what you are saying? Q. Mm-hmm. A. So it's not divided by. Q. It's .25 moles over 12 mils, which is 0.012 litters, right? A. So you want me to calculate the molarity 	2 3 4 5 6 7 8 9 10 10 11 12	 in freshman chemistry in 1984, so I guess I trust my calculation. You got the same result, so I assume it is probably right. But if I were if I were you, I would have done this carefully, made sure it is right, and presented me the data. Q. But your calculation A. If you want me to go through it and come up with it, I did it, and that is what I got. So you can believe that for what it is. I hope I didn't make a mistake. Q. And you got 20.8 molar? A. I did.
2 3 4 5 6 7 8 9 10 11 12 13	 Q. Would you do that calculation, .25 over 0.12? MR. ZIMMERMAN: 0.012. BY MR. SCHWARTZ Q. 0.012. A. 0.012 liters per mole is what you are saying? Q. Mm-hmm. A. So it's not divided by. Q. It's .25 moles over 12 mils, which is 0.012 litters, right? A. So you want me to calculate the molarity there? 	2 3 4 5 6 7 8 9 10 11 12 13	 in freshman chemistry in 1984, so I guess I trust my calculation. You got the same result, so I assume it is probably right. But if I were if I were you, I would have done this carefully, made sure it is right, and presented me the data. Q. But your calculation A. If you want me to go through it and come up with it, I did it, and that is what I got. So you can believe that for what it is. I hope I didn't make a mistake. Q. And you got 20.8 molar? A. I did. Q. So the concentration of methanol in
2 3 4 5 6 7 8 9 10 11 12 13 14	 Q. Would you do that calculation, .25 over 0.12? MR. ZIMMERMAN: 0.012. BY MR. SCHWARTZ Q. 0.012. A. 0.012 liters per mole is what you are saying? Q. Mm-hmm. A. So it's not divided by. Q. It's .25 moles over 12 mils, which is 0.012 litters, right? A. So you want me to calculate the molarity there? Q. Exactly. 	2 3 4 5 6 7 8 9 10 11 12 13 14	 in freshman chemistry in 1984, so I guess I trust my calculation. You got the same result, so I assume it is probably right. But if I were if I were you, I would have done this carefully, made sure it is right, and presented me the data. Q. But your calculation A. If you want me to go through it and come up with it, I did it, and that is what I got. So you can believe that for what it is. I hope I didn't make a mistake. Q. And you got 20.8 molar? A. I did. Q. So the concentration of methanol in Boss's allyl deprotection reaction is 20.8 molar,
2 3 4 5 6 7 8 9 10 11 12 13 14 15	 Q. Would you do that calculation, .25 over 0.12? MR. ZIMMERMAN: 0.012. BY MR. SCHWARTZ Q. 0.012. A. 0.012 liters per mole is what you are saying? Q. Mm-hmm. A. So it's not divided by. Q. It's .25 moles over 12 mils, which is 0.012 litters, right? A. So you want me to calculate the molarity there? Q. Exactly. MR. ZIMMERMAN: Take your time. 	2 3 4 5 6 7 8 9 10 11 12 13 14 15	 in freshman chemistry in 1984, so I guess I trust my calculation. You got the same result, so I assume it is probably right. But if I were if I were you, I would have done this carefully, made sure it is right, and presented me the data. Q. But your calculation A. If you want me to go through it and come up with it, I did it, and that is what I got. So you can believe that for what it is. I hope I didn't make a mistake. Q. And you got 20.8 molar? A. I did. Q. So the concentration of methanol in Boss's allyl deprotection reaction is 20.8 molar, correct? A. I believe so.
2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17	 Q. Would you do that calculation, .25 over 0.12? MR. ZIMMERMAN: 0.012. BY MR. SCHWARTZ Q. 0.012. A. 0.012 liters per mole is what you are saying? Q. Mm-hmm. A. So it's not divided by. Q. It's .25 moles over 12 mils, which is 0.012 litters, right? A. So you want me to calculate the molarity there? Q. Exactly. MR. ZIMMERMAN: Take your time. THE WITNESS: I calculate 21 molar. BY MR. SCHWARTZ: 	2 3 4 5 6 7 8 9 10 11 12 13 14 15 16	 in freshman chemistry in 1984, so I guess I trust my calculation. You got the same result, so I assume it is probably right. But if I were if I were you, I would have done this carefully, made sure it is right, and presented me the data. Q. But your calculation A. If you want me to go through it and come up with it, I did it, and that is what I got. So you can believe that for what it is. I hope I didn't make a mistake. Q. And you got 20.8 molar? A. I did. Q. So the concentration of methanol in Boss's allyl deprotection reaction is 20.8 molar, correct? A. I believe so. Q. Now, the Boss paper does not provide any
2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18	 Q. Would you do that calculation, .25 over 0.12? MR. ZIMMERMAN: 0.012. BY MR. SCHWARTZ Q. 0.012. A. 0.012 liters per mole is what you are saying? Q. Mm-hmm. A. So it's not divided by. Q. It's .25 moles over 12 mils, which is 0.012 litters, right? A. So you want me to calculate the molarity there? Q. Exactly. MR. ZIMMERMAN: Take your time. THE WITNESS: I calculate 21 molar. BY MR. SCHWARTZ: Q. 20.8 to be exact? 	2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17	 in freshman chemistry in 1984, so I guess I trust my calculation. You got the same result, so I assume it is probably right. But if I were if I were you, I would have done this carefully, made sure it is right, and presented me the data. Q. But your calculation A. If you want me to go through it and come up with it, I did it, and that is what I got. So you can believe that for what it is. I hope I didn't make a mistake. Q. And you got 20.8 molar? A. I did. Q. So the concentration of methanol in Boss's allyl deprotection reaction is 20.8 molar, correct? A. I believe so. Q. Now, the Boss paper does not provide any details of the deprotection reaction for compounds
2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19	 Q. Would you do that calculation, .25 over 0.12? MR. ZIMMERMAN: 0.012. BY MR. SCHWARTZ Q. 0.012. A. 0.012 liters per mole is what you are saying? Q. Mm-hmm. A. So it's not divided by. Q. It's .25 moles over 12 mils, which is 0.012 litters, right? A. So you want me to calculate the molarity there? Q. Exactly. MR. ZIMMERMAN: Take your time. THE WITNESS: I calculate 21 molar. BY MR. SCHWARTZ: Q. 20.8 to be exact? A. Okay. 20.8. 	2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19	 in freshman chemistry in 1984, so I guess I trust my calculation. You got the same result, so I assume it is probably right. But if I were if I were you, I would have done this carefully, made sure it is right, and presented me the data. Q. But your calculation A. If you want me to go through it and come up with it, I did it, and that is what I got. So you can believe that for what it is. I hope I didn't make a mistake. Q. And you got 20.8 molar? A. I did. Q. So the concentration of methanol in Boss's allyl deprotection reaction is 20.8 molar, correct? A. I believe so. Q. Now, the Boss paper does not provide any details of the deprotection reaction for compounds 4 and 5, which also indicates the same
2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20	 Q. Would you do that calculation, .25 over 0.12? MR. ZIMMERMAN: 0.012. BY MR. SCHWARTZ Q. 0.012. A. 0.012 liters per mole is what you are saying? Q. Mm-hmm. A. So it's not divided by. Q. It's .25 moles over 12 mils, which is 0.012 litters, right? A. So you want me to calculate the molarity there? Q. Exactly. MR. ZIMMERMAN: Take your time. THE WITNESS: I calculate 21 molar. BY MR. SCHWARTZ: Q. 20.8 to be exact? A. Okay. 20.8. Q. Do you agree? 	2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20	 in freshman chemistry in 1984, so I guess I trust my calculation. You got the same result, so I assume it is probably right. But if I were if I were you, I would have done this carefully, made sure it is right, and presented me the data. Q. But your calculation A. If you want me to go through it and come up with it, I did it, and that is what I got. So you can believe that for what it is. I hope I didn't make a mistake. Q. And you got 20.8 molar? A. I did. Q. So the concentration of methanol in Boss's allyl deprotection reaction is 20.8 molar, correct? A. I believe so. Q. Now, the Boss paper does not provide any details of the deprotection reaction for compounds 4 and 5, which also indicates the same methanol/water mixture. Based on the experimental
2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20 21	 Q. Would you do that calculation, .25 over 0.12? MR. ZIMMERMAN: 0.012. BY MR. SCHWARTZ Q. 0.012. A. 0.012 liters per mole is what you are saying? Q. Mm-hmm. A. So it's not divided by. Q. It's .25 moles over 12 mils, which is 0.012 litters, right? A. So you want me to calculate the molarity there? Q. Exactly. MR. ZIMMERMAN: Take your time. THE WITNESS: I calculate 21 molar. BY MR. SCHWARTZ: Q. 20.8 to be exact? A. Okay. 20.8. Q. Do you agree? A. It's what my calculation says, so 	2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20 21	 in freshman chemistry in 1984, so I guess I trust my calculation. You got the same result, so I assume it is probably right. But if I were if I were you, I would have done this carefully, made sure it is right, and presented me the data. Q. But your calculation A. If you want me to go through it and come up with it, I did it, and that is what I got. So you can believe that for what it is. I hope I didn't make a mistake. Q. And you got 20.8 molar? A. I did. Q. So the concentration of methanol in Boss's allyl deprotection reaction is 20.8 molar, correct? A. I believe so. Q. Now, the Boss paper does not provide any details of the deprotection reaction for compounds 4 and 5, which also indicates the same methanol/water mixture. Based on the experimental section we looked at, is it reasonable to believe
2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20 21 22	 Q. Would you do that calculation, .25 over 0.12? MR. ZIMMERMAN: 0.012. BY MR. SCHWARTZ Q. 0.012. A. 0.012 liters per mole is what you are saying? Q. Mm-hmm. A. So it's not divided by. Q. It's .25 moles over 12 mils, which is 0.012 litters, right? A. You got the same result, so I assume it is probably right. But if I were if I were you, I would have done this carefully, made sure it is right, and presented me the data. Q. But your calculation A. If you want me to go through it and come up with it, I did it, and that is what I got. So you can believe that for what it is. I hope I didn't make a mistake. Q. And you got 20.8 molar? A. I did. Q. So the concentration of methanol in Boss's allyI deprotection reaction is 20.8 molar, correct? A. I believe so. Q. Now, the Boss paper does not provide any details of the deprotection reaction for compounds 4 and 5, which also indicates the same methanol/water mixture. Based on the experimental section we looked at, is it reasonable to believe that the same methanol/water mixture was used for those reactions? A. I don't know. If he doesn't tell us,

	va Komesberg, Fil.b.		
1	Page 169 Q. It's reasonable though, could he he	1	Page 170 that seems to be what it is saying.
2	could be using that, correct?	2	Q. You actually relied on this paper in some
3	A. Could have.	3	of your IBS IPRs.
4	MR. SCHWARTZ: I'm going to mark another	4	A. That's why I said I have read it, but not
5	paper. This is going to require a marking. Court	5	in years. That is, I believe, 2014.
6	Reporter, this will be Exhibit 2085.	6	Q. You testified earlier that DNA primer
7	(Exhibit 2085 was marked for	7	templates that were used in SBS are more
8	identification.)	8	susceptible to denaturation than large pieces of
9	BY MR. SCHWARTZ	9	DNA.
10	Q. I'm putting in front of you a document	10	Do you remember that?
11	entitled "The Relationship of Structure to the	11	A. Yes.
12	Effectiveness of Denaturing Agents for	12	Q. Would you agree that the susceptibility
13	Deoxyribonucleic Acid" by Levine, et al. published	13	of DNA primary templates in an SBS reaction would
14	in 1973.	14	
15	Please turn to page 171 of the paper. On	15	bacteriophage DNA?
16	the top left side you see there is a table two?	16	A. To the extent that they are smaller, that
17	A. I see it.	17	-
18	Q. Table two is a list of reagents that were	18	Q. Now, first reagent listed in table two is
19	tested for their ability to denature DNA, correct?	19	methyl alcohol.
20	A. I see it.	20	Do you see that?
21	Q. And the DNA being tested here is	21	A. I do.
22	bacteria 5 DNA, correct?	22	Q. And that is the same as methanol,
23	A. That seems to be the case. I have not	23	-
24	read this paper. Actually, I have read this paper,	24	A. It is.
25	surprisingly, but I haven't read it in years, so	25	Q. And table two indicates that 3.5 molar
1	Page 171 mothemal denotures 50 percent of bacterionbage DNA		Page 172
	methanol denatures of dericent of dacteriodinade DNA	1	page 169, about nine lines up from the bottom.
1	methanol denatures 50 percent of bacteriophage DNA under the conditions of the assay, correct?	1	page 169, about nine lines up from the bottom, there is a sentence that begins with: "At
2	under the conditions of the assay, correct?		there is a sentence that begins with: "At
	under the conditions of the assay, correct? A. That is correct.	2 3	there is a sentence that begins with: "At 73 degrees there is essentially."
2 3	under the conditions of the assay, correct?A. That is correct.Q. And the conditions of the assay are given	2	there is a sentence that begins with: "At
2 3 4	under the conditions of the assay, correct?A. That is correct.Q. And the conditions of the assay are given on page 168.	2 3 4	there is a sentence that begins with: "At 73 degrees there is essentially." Do you see that? A. I do.
2 3 4 5 6	 under the conditions of the assay, correct? A. That is correct. Q. And the conditions of the assay are given on page 168. MR. ZIMMERMAN: To the extent you need 	2 3 4 5 6	 there is a sentence that begins with: "At 73 degrees there is essentially." Do you see that? A. I do. Q. And the sentence reads: "At 73 degrees
2 3 4 5 6 7	 under the conditions of the assay, correct? A. That is correct. Q. And the conditions of the assay are given on page 168. MR. ZIMMERMAN: To the extent you need time to verify that, please do. 	2 3 4 5 6	 there is a sentence that begins with: "At 73 degrees there is essentially." Do you see that? A. I do. Q. And the sentence reads: "At 73 degrees there is essentially no denaturation of DNA in the
2 3 4 5 6 7 8	 under the conditions of the assay, correct? A. That is correct. Q. And the conditions of the assay are given on page 168. MR. ZIMMERMAN: To the extent you need time to verify that, please do. BY MR. SCHWARTZ: 	2 3 4 5 6 7 8	 there is a sentence that begins with: "At 73 degrees there is essentially." Do you see that? A. 1 do. Q. And the sentence reads: "At 73 degrees there is essentially no denaturation of DNA in the absence of a denaturing agent."
2 3 4 5 6 7	 under the conditions of the assay, correct? A. That is correct. Q. And the conditions of the assay are given on page 168. MR. ZIMMERMAN: To the extent you need time to verify that, please do. 	2 3 4 5 6 7	 there is a sentence that begins with: "At 73 degrees there is essentially." Do you see that? A. I do. Q. And the sentence reads: "At 73 degrees there is essentially no denaturation of DNA in the
2 3 4 5 6 7 8 9	 under the conditions of the assay, correct? A. That is correct. Q. And the conditions of the assay are given on page 168. MR. ZIMMERMAN: To the extent you need time to verify that, please do. BY MR. SCHWARTZ: Q. The assay conditions for the data 	2 3 4 5 6 7 8 9	 there is a sentence that begins with: "At 73 degrees there is essentially." Do you see that? A. I do. Q. And the sentence reads: "At 73 degrees there is essentially no denaturation of DNA in the absence of a denaturing agent." That is what Levine wrote, correct?
2 3 4 5 6 7 8 9 10	 under the conditions of the assay, correct? A. That is correct. Q. And the conditions of the assay are given on page 168. MR. ZIMMERMAN: To the extent you need time to verify that, please do. BY MR. SCHWARTZ: Q. The assay conditions for the data reported in table two of Levine. Do you see where 	2 3 4 5 6 7 8 9 10	 there is a sentence that begins with: "At 73 degrees there is essentially." Do you see that? A. 1 do. Q. And the sentence reads: "At 73 degrees there is essentially no denaturation of DNA in the absence of a denaturing agent." That is what Levine wrote, correct? A. That is correct. Q. So the condition the reaction
2 3 4 5 6 7 8 9 10 11	 under the conditions of the assay, correct? A. That is correct. Q. And the conditions of the assay are given on page 168. MR. ZIMMERMAN: To the extent you need time to verify that, please do. BY MR. SCHWARTZ: Q. The assay conditions for the data reported in table two of Levine. Do you see where it said denaturation of DNA was determined as 	2 3 4 5 6 7 8 9 10 11	 there is a sentence that begins with: "At 73 degrees there is essentially." Do you see that? A. I do. Q. And the sentence reads: "At 73 degrees there is essentially no denaturation of DNA in the absence of a denaturing agent." That is what Levine wrote, correct? A. That is correct. Q. So the condition the reaction condition used to test the compounds in table two
2 3 4 5 6 7 8 9 10 11 12	 under the conditions of the assay, correct? A. That is correct. Q. And the conditions of the assay are given on page 168. MR. ZIMMERMAN: To the extent you need time to verify that, please do. BY MR. SCHWARTZ: Q. The assay conditions for the data reported in table two of Levine. Do you see where it said denaturation of DNA was determined as follows? 	2 3 4 5 6 7 8 9 10 11 12	 there is a sentence that begins with: "At 73 degrees there is essentially." Do you see that? A. I do. Q. And the sentence reads: "At 73 degrees there is essentially no denaturation of DNA in the absence of a denaturing agent." That is what Levine wrote, correct? A. That is correct. Q. So the condition the reaction condition used to test the compounds in table two of Levine were not themselves denaturing, correct?
2 3 4 5 6 7 8 9 10 11 12 13	 under the conditions of the assay, correct? A. That is correct. Q. And the conditions of the assay are given on page 168. MR. ZIMMERMAN: To the extent you need time to verify that, please do. BY MR. SCHWARTZ: Q. The assay conditions for the data reported in table two of Levine. Do you see where it said denaturation of DNA was determined as follows? A. I do. 	2 3 4 5 6 7 8 9 10 11 12 13	 there is a sentence that begins with: "At 73 degrees there is essentially." Do you see that? A. I do. Q. And the sentence reads: "At 73 degrees there is essentially no denaturation of DNA in the absence of a denaturing agent." That is what Levine wrote, correct? A. That is correct. Q. So the condition the reaction condition used to test the compounds in table two of Levine were not themselves denaturing, correct? A. No, that is not true at all. They
2 3 4 5 6 7 8 9 10 11 12 13 14	 under the conditions of the assay, correct? A. That is correct. Q. And the conditions of the assay are given on page 168. MR. ZIMMERMAN: To the extent you need time to verify that, please do. BY MR. SCHWARTZ: Q. The assay conditions for the data reported in table two of Levine. Do you see where it said denaturation of DNA was determined as follows? A. I do. Q. And it was 30 minutes under buffered aqueous conditions at close to neutral pH at 	2 3 4 5 6 7 8 9 10 11 12 13 14	 there is a sentence that begins with: "At 73 degrees there is essentially." Do you see that? A. I do. Q. And the sentence reads: "At 73 degrees there is essentially no denaturation of DNA in the absence of a denaturing agent." That is what Levine wrote, correct? A. That is correct. Q. So the condition the reaction condition used to test the compounds in table two of Levine were not themselves denaturing, correct? A. No, that is not true at all. They basically took the system to the brink of
2 3 4 5 6 7 8 9 10 11 12 13 14 15 16	 under the conditions of the assay, correct? A. That is correct. Q. And the conditions of the assay are given on page 168. MR. ZIMMERMAN: To the extent you need time to verify that, please do. BY MR. SCHWARTZ: Q. The assay conditions for the data reported in table two of Levine. Do you see where it said denaturation of DNA was determined as follows? A. I do. Q. And it was 30 minutes under buffered aqueous conditions at close to neutral pH at 73 degrees C. 	2 3 4 5 6 7 8 9 10 11 12 13 14 15 16	 there is a sentence that begins with: "At 73 degrees there is essentially." Do you see that? A. I do. Q. And the sentence reads: "At 73 degrees there is essentially no denaturation of DNA in the absence of a denaturing agent." That is what Levine wrote, correct? A. That is correct. Q. So the condition the reaction condition used to test the compounds in table two of Levine were not themselves denaturing, correct? A. No, that is not true at all. They basically took the system to the brink of denaturation by heating it up. 73 degrees. That
2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17	 under the conditions of the assay, correct? A. That is correct. Q. And the conditions of the assay are given on page 168. MR. ZIMMERMAN: To the extent you need time to verify that, please do. BY MR. SCHWARTZ: Q. The assay conditions for the data reported in table two of Levine. Do you see where it said denaturation of DNA was determined as follows? A. I do. Q. And it was 30 minutes under buffered aqueous conditions at close to neutral pH at 73 degrees C. Do you see that? 	2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17	 there is a sentence that begins with: "At 73 degrees there is essentially." Do you see that? A. I do. Q. And the sentence reads: "At 73 degrees there is essentially no denaturation of DNA in the absence of a denaturing agent." That is what Levine wrote, correct? A. That is correct. Q. So the condition the reaction condition used to test the compounds in table two of Levine were not themselves denaturing, correct? A. No, that is not true at all. They basically took the system to the brink of denaturation by heating it up. 73 degrees. That is the point.
2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18	 under the conditions of the assay, correct? A. That is correct. Q. And the conditions of the assay are given on page 168. MR. 1	Page 173 A. None of the strands are dissociating,	1	Page 174 Mischaracterizes the document.
2	detectably. But they have the whole point of	2	You can answer.
3	elevating the temperature was to give them a regime	3	MR. SCHWARTZ: No, I'm asking about his
4	where they could see changes.	4	testimony.
5	Q. What temperature do you think is in	5	MR. ZIMMERMAN: I know, but the question
6	your opinion, what temperature does denature DNA?	6	mischaracterizes the document, so I'm going to make
7	A. It depends on the sequence, the sequence	7	the objection.
8	length, the sequence context. It's variable. It	8	, You can answer.
9	depends on the conditions. 73 is up there.	9	BY MR. SCHWARTZ:
10	Q. Would 80 degrees denature DNA?	10	Q. The sentence reads: "At 73 degrees there
11	A. PCR reactions, which they have much	11	is essentially no denaturation of DNA in the
12	longer strands of DNA, routinely heat up to	12	absence of a denaturing agent." That is what it
13	90 degrees, 88 degrees, 89 degrees, and assume	13	says, right? And then you had a position about
14	complete denaturation in no methanol, in just	14	
15	aqueous standard conditions that favor duplex	15	where DNA denatures. You were making a point,
16	formation. So 73 is a lot closer to 89 or 88 than	16	right?
17	it is to room temperature of 37. These strands are	17	A. Yes. The point that I was trying to
18	close to dissociating.	18	make and it wasn't for this specific strand,
19	Q. I mean it is your point that 73 degrees,	19	because I don't know the temperature at which it
20	even though Levine reports that there is no	20	would dissociate. 73 degrees what DNA duplex
21	denaturation of the DNA in the absence of a	21	is susceptible to heating. Heating is a
22	denaturing agent, your position is that that is	22	denaturation is a denature you have a free
23	close to the level of where DNA would be denatured,	23	energy that stabilizes a duplex. When you increase
24	if I understood you correctly?	24	the temperature, the free energy stabilizing the
25	MR. ZIMMERMAN: Objection.	25	duplex is decreasing, and you can get that to an
	Page 175		B (73)

1	arbitrarily small value, and it won't dissociate	1	Page 176 is not speculation.
1		1 2	
	arbitrarily small value, and it won't dissociate		is not speculation.
2	arbitrarily small value, and it won't dissociate yet. And then a little more denaturation, whether	2	is not speculation. Q. But do you remember relying on this very
23	arbitrarily small value, and it won't dissociate yet. And then a little more denaturation, whether that be provided by further increase in temperature	2 3	is not speculation. Q. But do you remember relying on this very paper and this very table in your IPRs against IBS?
2 3 4	arbitrarily small value, and it won't dissociate yet. And then a little more denaturation, whether that be provided by further increase in temperature or addition of methanol or whatever sort of	2 3 4 5	is not speculation. Q. But do you remember relying on this very paper and this very table in your IPRs against IBS? A. I do.
2 3 4	arbitrarily small value, and it won't dissociate yet. And then a little more denaturation, whether that be provided by further increase in temperature or addition of methanol or whatever sort of denature you are interested in, then makes that	2 3 4 5	 is not speculation. Q. But do you remember relying on this very paper and this very table in your IPRs against IBS? A. I do. Q. And you relied on this paper and this
2 3 4	arbitrarily small value, and it won't dissociate yet. And then a little more denaturation, whether that be provided by further increase in temperature or addition of methanol or whatever sort of denature you are interested in, then makes that free energy increasingly less favorable. And then	2 3 4 5 6	 is not speculation. Q. But do you remember relying on this very paper and this very table in your IPRs against IBS? A. I do. Q. And you relied on this paper and this very table to make conclusions about what agents
2 3 4 5 6 7	arbitrarily small value, and it won't dissociate yet. And then a little more denaturation, whether that be provided by further increase in temperature or addition of methanol or whatever sort of denature you are interested in, then makes that free energy increasingly less favorable. And then you will start to see the dissociation of that.	2 3 4 5 6 7	 is not speculation. Q. But do you remember relying on this very paper and this very table in your IPRs against IBS? A. I do. Q. And you relied on this paper and this very table to make conclusions about what agents would be DNA denaturing agents.
2 3 4 5 6 7 8	arbitrarily small value, and it won't dissociate yet. And then a little more denaturation, whether that be provided by further increase in temperature or addition of methanol or whatever sort of denature you are interested in, then makes that free energy increasingly less favorable. And then you will start to see the dissociation of that. So what they are doing is they are taking	2 3 4 5 6 7 8	 is not speculation. Q. But do you remember relying on this very paper and this very table in your IPRs against IBS? A. I do. Q. And you relied on this paper and this very table to make conclusions about what agents would be DNA denaturing agents. Do you remember that?
2 3 4 5 6 7 8 9	arbitrarily small value, and it won't dissociate yet. And then a little more denaturation, whether that be provided by further increase in temperature or addition of methanol or whatever sort of denature you are interested in, then makes that free energy increasingly less favorable. And then you will start to see the dissociation of that. So what they are doing is they are taking their system my guess is what they did was they	2 3 4 5 6 7 8 9	 is not speculation. Q. But do you remember relying on this very paper and this very table in your IPRs against IBS? A. I do. Q. And you relied on this paper and this very table to make conclusions about what agents would be DNA denaturing agents. Do you remember that? A. I do.
2 3 4 5 6 7 8 9 10	arbitrarily small value, and it won't dissociate yet. And then a little more denaturation, whether that be provided by further increase in temperature or addition of methanol or whatever sort of denature you are interested in, then makes that free energy increasingly less favorable. And then you will start to see the dissociation of that. So what they are doing is they are taking their system my guess is what they did was they wanted to within one piece of DNA, they wanted	2 3 4 5 6 7 8 9 10	 is not speculation. Q. But do you remember relying on this very paper and this very table in your IPRs against IBS? A. I do. Q. And you relied on this paper and this very table to make conclusions about what agents would be DNA denaturing agents. Do you remember that? A. I do. Q. So you at one point you relied on this
2 3 4 5 6 7 8 9 10 11	arbitrarily small value, and it won't dissociate yet. And then a little more denaturation, whether that be provided by further increase in temperature or addition of methanol or whatever sort of denature you are interested in, then makes that free energy increasingly less favorable. And then you will start to see the dissociation of that. So what they are doing is they are taking their system my guess is what they did was they wanted to within one piece of DNA, they wanted to be able to add different things and be able to	2 3 4 5 6 7 8 9 10 11	 is not speculation. Q. But do you remember relying on this very paper and this very table in your IPRs against IBS? A. I do. Q. And you relied on this paper and this very table to make conclusions about what agents would be DNA denaturing agents. Do you remember that? A. I do. Q. So you at one point you relied on this table to make a conclusion about what agents were
2 3 4 5 6 7 8 9 10 11 12	arbitrarily small value, and it won't dissociate yet. And then a little more denaturation, whether that be provided by further increase in temperature or addition of methanol or whatever sort of denature you are interested in, then makes that free energy increasingly less favorable. And then you will start to see the dissociation of that. So what they are doing is they are taking their system my guess is what they did was they wanted to within one piece of DNA, they wanted to be able to add different things and be able to see a range they wanted everything to be able to cause denaturation so they could compare them. I think a chemist or a scientist would	2 3 4 5 6 7 8 9 10 11 12	 is not speculation. Q. But do you remember relying on this very paper and this very table in your IPRs against IBS? A. I do. Q. And you relied on this paper and this very table to make conclusions about what agents would be DNA denaturing agents. Do you remember that? A. I do. Q. So you at one point you relied on this table to make a conclusion about what agents were DNA denaturing agents, correct? A. I made no conclusions about quantitatively at this temperature or any
2 3 4 5 6 7 8 9 10 11 12 13	arbitrarily small value, and it won't dissociate yet. And then a little more denaturation, whether that be provided by further increase in temperature or addition of methanol or whatever sort of denature you are interested in, then makes that free energy increasingly less favorable. Floy	d Romesberg, Ph.D.		University in the City of New York
1	Page 177	1	Page 178 was that you needed, at any given temperature, less
1	So it is not disingenuous, and I would still believe this, that if I look at that table,	1	pyridine to cause denature than most other things.
3	you see pyridine is 0.09 molar. That's much less	3	And that is true.
4	than methanol. And I believe my point was, and I	4	Q. And going back to the entry for methanol
5	would have to go look to rethink this if you want	5	that you just brought that up again, 3.5
6	me to be sure, but I believe my point was that	6	methanol 3.5 molar methanol is reported in this
7	pyridine is a relatively strong denaturant. And I	7	paper to cause 50 percent denaturation of the
8	believe that conclusion is correct.	8	bacteriophage DNA in 30 minutes, correct?
9	Q. But you did rely on this paper and on	9	A. At 73 degrees.
10	that table to form that conclusion?	10	Q. Which the paper reports there was
11	A. In the way I just described it, yes.	11	essentially no denaturation of DNA at that
12	Which is not the same as the way we are looking at	12	-
13	it now. Just to be clear.	13	A. I'm not sure if you don't understand what
14	Q. And in what way is it different?	14	-
15	A. I was comparing pyridine to other things.	15	They took this by heating it up to a temperature
16	Q. I haven't even asked you any questions	16	
17	about this table yet, so all I've asked you is	17	almost taken to zero. That allowed them to add
18	what the reaction conditions were.	18	different denaturants and get dissociation so
19	A. No, you are asking me about methanol	19	everything they added, they would be able to see
20	being a denaturant, and that is shown there in the	20	denaturation. They wanted to do that so they can
21	concentration.	21	see how they all compared. That is one conclusion
22	Q. Yes.	22	you can draw from this table.
23	A. And that is in this table.	23	That was not the conclusion that I drew
24	Q. Yes.	24	
25	A. The only point that I was making before	25	evoked. The conclusion I drew at that time was
1	Page 179 that pyridine under these given conditions is a	1	Page 180 A. 3.5. Let me get my calculator. 20.8
2	stronger denaturant than methanol. Not that	2	divided by 3.5. I get 5.94.
3	pyridine would or wouldn't have denatured it at	3	Q. So that's almost a six fold difference,
4	these exact conditions.	4	correct?
5	Q. Does this paper report that 3.5 molar	5	A. Yeah, that's almost a six fold.
6	methanol caused 50 percent denaturation of the	6	Q. So a POSA reading this paper, Levine,
7	bacteriophage DNA in 30 minutes? Does the paper	7	understood that 20.8 molar would be expected to
8	report that?	8	denature DNA?
9	A. At 73 degrees.	9	MR. ZIMMERMAN: Object as to form.
10	Q. Now, we just did the calculation for the	10	THE WITNESS: I don't know how to explain
11	concentration of methanol in the allyl protection	11	this better, because I am not sure if you're simply
12	reaction in Boss, correct?	12	not listening to me, or if I'm not explaining it
13	A. Yes.	13	well. I will try to explain this again if you want
14	Q. And that was 20.8 molar, correct?	14	me to, but the conclusion that you just reached is
15	A. Correct.	15	wrong. This reaction was performed at room
16	Q. And that is almost six times the	16	temperature. The comparison you just made would be
17	concentration of methanol that caused 50 percent	17	at 73 degrees temperature. I'm sure your expert
18	denaturation of bacteriophage DNA in Levine,	18	witness will help you walk you through this if
19	correct?	19	you don't believe me.
1		20	20 molar methanol, this paper certainly
20	 Are you asking me to calculate that six 	20	,,,,
20 21	A. Are you asking me to calculate that six times?	20	suggests you will get full denaturation. It does
21	times?	21	suggests you will get full denaturation. It does
21 22	times? Q. Sure.	21 22	suggests you will get full denaturation. It does not tell you what will happen at room temperature.
21 22 23	times? Q. Sure. A. So you want me to take 20.8 and divide it	21 22 23	suggests you will get full denaturation. It does not tell you what will happen at room temperature. BY MR. SCHWARTZ:

	University in the City of New Tor
Page 181 1 A. 20 molar methanol at room temperature?	Page 182 1 A. At 73 degrees.
2 Q. 20.8 molar methanol.	2 Q. Which the paper reports there was no
3 MR. ZIMMERMAN: Objection. Incomplete	3 denaturation without the denaturant, right?
4 hypothetical.	4 A. I know you're making
5 THE WITNESS: Are you asking if it would	5 MR. ZIMMERMAN: Objection.
6 denature DNA or if the entire process would be	6 Mischaracterizes the document again.
7 compatible with that much methanol?	7 MR. SCHWARTZ: I disagree with your
8 BY MR. SCHWARTZ:	8 saying that it mischaracterizes.
9 Q. Let's start with the later. Would the	9 MR. ZIMMERMAN: You're leaving out the
	-
 10 process be compatible with that much methanol? 11 A. Probably. It would probably affect the 	10 word "essentially." Every time you characterize11 you leave out "essentially," so that is a
	12 mischaracterization of the document.
13 Q. And at the bottom of table two there is	13 MR. SCHWARTZ: The document says that at
14 an entry for acetonitrile.	14 73 degrees there is essentially no denaturation in
15 Do you see that?	15 the absence of denaturing agent. That is what the
16 A. Bottom of table two.	16 document says, correct?
17 Q. Of that Levine paper.	17 THE WITNESS: Yes.
18 A. Oh, yes.	18 MR. SCHWARTZ: Can we take a break?
19 Q. And table two reports	19 Let's take a break here.
20 A. I'm sorry, acetonitrile? At the bottom?	20 MR. ZIMMERMAN: Sure
21 Q. At the bottom right.	21 THE VIDEOGRAPHER: We are off the record
A. Oh, yeah, sorry. Yes, I found it.	22 at 2:26 p.m.
23 Q. And table two reports that 1.2 molar	23 (Recess taken.)
24 acetonitrile causes 50 percent denaturation of	24 THE VIDEOGRAPHER: We are on the record
25 bacteriophage DNA, correct?	25 at 2:46 p.m.

	yu Komesberg, Fil.D.		
1	Page 185 very powerful DNA denaturant, correct?	1	Page 186 really care if it is needed or not. Because
2	A. That is what is written there, yes.		they're sort of generic conditions.
3	Q. Please go back to the Boss reference that	3	And so I imagine that is what they were
4	was Exhibit 1035. And please go back to Table 1.	4	doing here.
5	And if you look at the legend of Table 1, the	5	Q. But clearly it indicates that perchloric
6	legend indicates that deprotection conditions for		
	all of the compounds except compound 8 contained	6	acid is present in these deprotection reactions.
7		7	MR. ZIMMERMAN: Objection. Asked and
8	perchloric acid, correct?	8	
9	A. That is correct.	9	BY MR. SCHWARTZ
10	Q. And the acid is there because it is	10	Q. And, again, we looked at this before. I
11	required for deprotecting an allyl using palladium	11	know that you don't like doing calculations, so I
12	two, correct?	12	won't ask you to do it if you don't want to, but I
13	A. That is not correct.	13	
14	Q. There is acid there, correct?	14	
15	A. There is acid, yes.	15	5 millimolar, correct?
16	Q. Okay.	16	A. I think that I remember reading that.
17	A. So let me be clear about that, in	17	Q. It's actually in the paper.
18	principle, it might have been important. The way	18	A. Okay.
19	people run these reactions if you look at the	19	Q. Do you see it? Turn it over and look at
20	mechanism, there is a spot where if you do not have	20	note a under the table.
21	a powerful nucleophile, your electrophile has to be	21	A. Yes.
22	made a better leaving group. And in those cases it	22	Q. And I want to calculate what the
23	might be beneficial to add a proton, very common	23	concentration of perchloric acid is when it's
24	for people if they were not conducting mechanistic	24	1 millimolar one millimole per 12 mils. That's
25	studies to simply add some acid because they don't	25	a simple calculation. I got 83 millimolars. Would
	Page 187		Page 188
1	Page 187 you like to confirm that it is 83 millimolars?	1	Page 188 1.1.
1 2		1 2	
	you like to confirm that it is 83 millimolars?	-	1.1.
2	you like to confirm that it is 83 millimolars? A. No. I'll take your word for it.	2	1.1. A. Sounds about right.
2 3	you like to confirm that it is 83 millimolars?A. No. I'll take your word for it.Q. And 5 millimoles of perchloric acid in 12	2 3	1.1.A. Sounds about right.Q. And your counsel will have an opportunity
2 3 4 5	 you like to confirm that it is 83 millimolars? A. No. I'll take your word for it. Q. And 5 millimoles of perchloric acid in 12 mils. I calculated it was 417 millimolars. 	2 3 4	 1.1. A. Sounds about right. Q. And your counsel will have an opportunity to correct me if I am wrong. And the pH for .417
2 3 4 5	 you like to confirm that it is 83 millimolars? A. No. I'll take your word for it. Q. And 5 millimoles of perchloric acid in 12 mils. I calculated it was 417 millimolars. Do you want to confirm that it is 417 	2 3 4 5	 1.1. A. Sounds about right. Q. And your counsel will have an opportunity to correct me if I am wrong. And the pH for .417 molar is about .4.
2 3 4 5 6	 you like to confirm that it is 83 millimolars? A. No. I'll take your word for it. Q. And 5 millimoles of perchloric acid in 12 mils. I calculated it was 417 millimolars. Do you want to confirm that it is 417 millimolar? 	2 3 4 5 6	 1.1. A. Sounds about right. Q. And your counsel will have an opportunity to correct me if I am wrong. And the pH for .417 molar is about .4. A. Okay.
2 3 4 5 6 7	 you like to confirm that it is 83 millimolars? A. No. I'll take your word for it. Q. And 5 millimoles of perchloric acid in 12 mils. I calculated it was 417 millimolars. Do you want to confirm that it is 417 millimolar? A. If I bought the first, I bought the 	2 3 4 5 6 7	 1.1. A. Sounds about right. Q. And your counsel will have an opportunity to correct me if I am wrong. And the pH for .417 molar is about .4. A. Okay. Q. I mean, would you like to do the
2 3 4 5 6 7 8	 you like to confirm that it is 83 millimolars? A. No. I'll take your word for it. Q. And 5 millimoles of perchloric acid in 12 mils. I calculated it was 417 millimolars. Do you want to confirm that it is 417 millimolar? A. If I bought the first, I bought the second. 	2 3 4 5 6 7 8	 1.1. A. Sounds about right. Q. And your counsel will have an opportunity to correct me if I am wrong. And the pH for .417 molar is about .4. A. Okay. Q. I mean, would you like to do the calculation to confirm me?
2 3 4 5 6 7 8 9	 you like to confirm that it is 83 millimolars? A. No. I'll take your word for it. Q. And 5 millimoles of perchloric acid in 12 mils. I calculated it was 417 millimolars. Do you want to confirm that it is 417 millimolar? A. If I bought the first, I bought the second. Q. I am going to ask you now to do a 	2 3 4 5 6 7 8 9	 1.1. A. Sounds about right. Q. And your counsel will have an opportunity to correct me if I am wrong. And the pH for .417 molar is about .4. A. Okay. Q. I mean, would you like to do the calculation to confirm me? A. No. It's a straightforward calculation.
2 3 4 5 6 7 8 9 10	 you like to confirm that it is 83 millimolars? A. No. I'll take your word for it. Q. And 5 millimoles of perchloric acid in 12 mils. I calculated it was 417 millimolars. Do you want to confirm that it is 417 millimolar? A. If I bought the first, I bought the second. Q. I am going to ask you now to do a calculation of pHs. And I will provide you with 	2 3 4 5 6 7 8 9 10	 1.1. A. Sounds about right. Q. And your counsel will have an opportunity to correct me if I am wrong. And the pH for .417 molar is about .4. A. Okay. Q. I mean, would you like to do the calculation to confirm me? A. No. It's a straightforward calculation. Q. So maybe you can write that down that the
2 3 4 5 6 7 8 9 10 11	 you like to confirm that it is 83 millimolars? A. No. I'll take your word for it. Q. And 5 millimoles of perchloric acid in 12 mils. I calculated it was 417 millimolars. Do you want to confirm that it is 417 millimolar? A. If I bought the first, I bought the second. Q. I am going to ask you now to do a calculation of pHs. And I will provide you with some information so use that table or use that 	2 3 4 5 6 7 8 9 10 11	 1.1. A. Sounds about right. Q. And your counsel will have an opportunity to correct me if I am wrong. And the pH for .417 molar is about .4. A. Okay. Q. I mean, would you like to do the calculation to confirm me? A. No. It's a straightforward calculation. Q. So maybe you can write that down that the pH of .083 molar is about 1.1, and the pH of .417
2 3 4 5 6 7 8 9 10 11 12	 you like to confirm that it is 83 millimolars? A. No. I'll take your word for it. Q. And 5 millimoles of perchloric acid in 12 mils. I calculated it was 417 millimolars. Do you want to confirm that it is 417 millimolar? A. If I bought the first, I bought the second. Q. I am going to ask you now to do a calculation of pHs. And I will provide you with some information so use that table or use that piece of paper. The first piece of information 	2 3 4 5 6 7 8 9 10 11 12	 1.1. A. Sounds about right. Q. And your counsel will have an opportunity to correct me if I am wrong. And the pH for .417 molar is about .4. A. Okay. Q. I mean, would you like to do the calculation to confirm me? A. No. It's a straightforward calculation. Q. So maybe you can write that down that the pH of .083 molar is about 1.1, and the pH of .417 molar is about pH of .4.
2 3 4 5 6 7 8 9 10 11 12 13	 you like to confirm that it is 83 millimolars? A. No. I'll take your word for it. Q. And 5 millimoles of perchloric acid in 12 mils. I calculated it was 417 millimolars. Do you want to confirm that it is 417 millimolar? A. If I bought the first, I bought the second. Q. I am going to ask you now to do a calculation of pHs. And I will provide you with some information so use that table or use that piece of paper. The first piece of information I'll provide to you is that the formula for 	2 3 4 5 6 7 8 9 10 11 12 13	 1.1. A. Sounds about right. Q. And your counsel will have an opportunity to correct me if I am wrong. And the pH for .417 molar is about .4. A. Okay. Q. I mean, would you like to do the calculation to confirm me? A. No. It's a straightforward calculation. Q. So maybe you can write that down that the pH of .083 molar is about 1.1, and the pH of .417 molar is about pH of .4. A. What was the first number? Q. I'm sorry, 1.1.
2 3 4 5 6 7 8 9 10 11 12 13 14	 you like to confirm that it is 83 millimolars? A. No. I'll take your word for it. Q. And 5 millimoles of perchloric acid in 12 mils. I calculated it was 417 millimolars. Do you want to confirm that it is 417 millimolar? A. If I bought the first, I bought the second. Q. I am going to ask you now to do a calculation of pHs. And I will provide you with some information so use that table or use that piece of paper. The first piece of information I'll provide to you is that the formula for determining pH is pH equals minus log of the proton concentration. So when the hydrogen when the 	2 3 4 5 6 7 8 9 10 11 12 13 14	 1.1. A. Sounds about right. Q. And your counsel will have an opportunity to correct me if I am wrong. And the pH for .417 molar is about .4. A. Okay. Q. I mean, would you like to do the calculation to confirm me? A. No. It's a straightforward calculation. Q. So maybe you can write that down that the pH of .083 molar is about 1.1, and the pH of .417 molar is about pH of .4. A. What was the first number?
2 3 4 5 6 7 8 9 10 11 12 13 14 15	 you like to confirm that it is 83 millimolars? A. No. I'll take your word for it. Q. And 5 millimoles of perchloric acid in 12 mils. I calculated it was 417 millimolars. Do you want to confirm that it is 417 millimolar? A. If I bought the first, I bought the second. Q. I am going to ask you now to do a calculation of pHs. And I will provide you with some information so use that table or use that piece of paper. The first piece of information I'll provide to you is that the formula for determining pH is pH equals minus log of the proton concentration is .083 molar, pH would be the 	2 3 4 5 6 7 8 9 10 11 12 13 14 15	 1.1. A. Sounds about right. Q. And your counsel will have an opportunity to correct me if I am wrong. And the pH for .417 molar is about .4. A. Okay. Q. I mean, would you like to do the calculation to confirm me? A. No. It's a straightforward calculation. Q. So maybe you can write that down that the pH of .083 molar is about 1.1, and the pH of .417 molar is about pH of .4. A. What was the first number? Q. I'm sorry, 1.1. A. What was the hydrogen ion concentration? Q083.
2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17	 you like to confirm that it is 83 millimolars? A. No. I'll take your word for it. Q. And 5 millimoles of perchloric acid in 12 mils. I calculated it was 417 millimolars. Do you want to confirm that it is 417 millimolar? A. If I bought the first, I bought the second. Q. I am going to ask you now to do a calculation of pHs. And I will provide you with some information so use that table or use that piece of paper. The first piece of information I'll provide to you is that the formula for determining pH is pH equals minus log of the proton concentration. So when the hydrogen when the 	2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17	 1.1. A. Sounds about right. Q. And your counsel will have an opportunity to correct me if I am wrong. And the pH for .417 molar is about .4. A. Okay. Q. I mean, would you like to do the calculation to confirm me? A. No. It's a straightforward calculation. Q. So maybe you can write that down that the pH of .083 molar is about 1.1, and the pH of .417 molar is about pH of .4. A. What was the first number? Q. I'm sorry, 1.1. A. What was the hydrogen ion concentration? Q083. A. Zero eight?
2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18	 you like to confirm that it is 83 millimolars? A. No. I'll take your word for it. Q. And 5 millimoles of perchloric acid in 12 mils. I calculated it was 417 millimolars. Do you want to confirm that it is 417 millimolar? A. If I bought the first, I bought the second. Q. I am going to ask you now to do a calculation of pHs. And I will provide you with some information so use that table or use that piece of paper. The first piece of information I'll provide to you is that the formula for determining pH is pH equals minus log of the proton concentration. So when the hydrogen when the proton concentration is .083 molar, pH would be the minus log of .083, correct? A. That is correct. 	2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18	 1.1. A. Sounds about right. Q. And your counsel will have an opportunity to correct me if I am wrong. And the pH for .417 molar is about .4. A. Okay. Q. I mean, would you like to do the calculation to confirm me? A. No. It's a straightforward calculation. Q. So maybe you can write that down that the pH of .083 molar is about 1.1, and the pH of .417 molar is about pH of .4. A. What was the first number? Q. I'm sorry, 1.1. A. What was the hydrogen ion concentration? Q083. A. Zero eight? Q083. I think you may have written that
2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19	 you like to confirm that it is 83 millimolars? A. No. I'll take your word for it. Q. And 5 millimoles of perchloric acid in 12 mils. I calculated it was 417 millimolars. Do you want to confirm that it is 417 millimolar? A. If I bought the first, I bought the second. Q. I am going to ask you now to do a calculation of pHs. And I will provide you with some information so use that table or use that piece of paper. The first piece of information I'll provide to you is that the formula for determining pH is pH equals minus log of the proton concentration is .083 molar, pH would be the minus log of .083, correct? A. That is correct. 	2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19	 1.1. A. Sounds about right. Q. And your counsel will have an opportunity to correct me if I am wrong. And the pH for .417 molar is about .4. A. Okay. Q. I mean, would you like to do the calculation to confirm me? A. No. It's a straightforward calculation. Q. So maybe you can write that down that the pH of .083 molar is about 1.1, and the pH of .417 molar is about pH of .4. A. What was the first number? Q. I'm sorry, 1.1. A. What was the hydrogen ion concentration? Q083. A. Zero eight? Q083. I think you may have written that down already. There were two concentrations of
2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18	 you like to confirm that it is 83 millimolars? A. No. I'll take your word for it. Q. And 5 millimoles of perchloric acid in 12 mils. I calculated it was 417 millimolars. Do you want to confirm that it is 417 millimolar? A. If I bought the first, I bought the second. Q. I am going to ask you now to do a calculation of pHs. And I will provide you with some information so use that table or use that piece of paper. The first piece of information I'll provide to you is that the formula for determining pH is pH equals minus log of the proton concentration is .083 molar, pH would be the minus log of .083, correct? A. That is correct. Q. And likewise, when the hydrogen the proton concentration is .417 molar, the pH will be 	2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20	 1.1. A. Sounds about right. Q. And your counsel will have an opportunity to correct me if I am wrong. And the pH for .417 molar is about .4. A. Okay. Q. I mean, would you like to do the calculation to confirm me? A. No. It's a straightforward calculation. Q. So maybe you can write that down that the pH of .083 molar is about 1.1, and the pH of .417 molar is about pH of .4. A. What was the first number? Q. I'm sorry, 1.1. A. What was the hydrogen ion concentration? Q083. A. Zero eight? Q083. I think you may have written that down already. There were two concentrations of perchloric acid given in that figure.
2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20 21	 you like to confirm that it is 83 millimolars? A. No. I'll take your word for it. Q. And 5 millimoles of perchloric acid in 12 mils. I calculated it was 417 millimolars. Do you want to confirm that it is 417 millimolar? A. If I bought the first, I bought the second. Q. I am going to ask you now to do a calculation of pHs. And I will provide you with some information so use that table or use that piece of paper. The first piece of information I'll provide to you is that the formula for determining pH is pH equals minus log of the proton concentration is .083 molar, pH would be the minus log of .083, correct? A. That is correct. Q. And likewise, when the hydrogen the proton concentration is .417 molar, the pH will be the minus log of .417, correct? 	2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20 21	 1.1. A. Sounds about right. Q. And your counsel will have an opportunity to correct me if I am wrong. And the pH for .417 molar is about .4. A. Okay. Q. I mean, would you like to do the calculation to confirm me? A. No. It's a straightforward calculation. Q. So maybe you can write that down that the pH of .083 molar is about 1.1, and the pH of .417 molar is about pH of .4. A. What was the first number? Q. I'm sorry, 1.1. A. What was the hydrogen ion concentration? Q083. A. Zero eight? Q083. I think you may have written that down already. There were two concentrations of perchloric acid given in that figure. A. So it was 0.417 and 0.083 pH of 1.1 and
2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20 21 22	 you like to confirm that it is 83 millimolars? A. No. I'll take your word for it. Q. And 5 millimoles of perchloric acid in 12 mils. I calculated it was 417 millimolars. Do you want to confirm that it is 417 millimolar? A. If I bought the first, I bought the second. Q. I am going to ask you now to do a calculation of pHs. And I will provide you with some information so use that table or use that piece of paper. The first piece of information I'll provide to you is that the formula for determining pH is pH equals minus log of the proton concentration is .083 molar, pH would be the minus log of .083, correct? A. That is correct. Q. And likewise, when the hydrogen the proton concentration is .417 molar, the pH will be the minus log of .417, correct? A. Yes. 	2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20 21 22	 1.1. A. Sounds about right. Q. And your counsel will have an opportunity to correct me if I am wrong. And the pH for .417 molar is about .4. A. Okay. Q. I mean, would you like to do the calculation to confirm me? A. No. It's a straightforward calculation. Q. So maybe you can write that down that the pH of .083 molar is about 1.1, and the pH of .417 molar is about pH of .4. A. What was the first number? Q. I'm sorry, 1.1. A. What was the hydrogen ion concentration? Q083. A. Zero eight? Q083. I think you may have written that down already. There were two concentrations of perchloric acid given in that figure. A. So it was 0.417 and 0.083 pH of 1.1 and 0.84?
2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20 21 22 23	 you like to confirm that it is 83 millimolars? A. No. I'll take your word for it. Q. And 5 millimoles of perchloric acid in 12 mils. I calculated it was 417 millimolars. Do you want to confirm that it is 417 millimolar? A. If I bought the first, I bought the second. Q. I am going to ask you now to do a calculation of pHs. And I will provide you with some information so use that table or use that piece of paper. The first piece of information I'll provide to you is that the formula for determining pH is pH equals minus log of the proton concentration is .083 molar, pH would be the minus log of .083, correct? A. That is correct. Q. And likewise, when the hydrogen the proton concentration is .417 molar, the pH will be the minus log of .417, correct? A. Yes. Q. We have a calculator that does logs? 	2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20 21 22 23	 1.1. A. Sounds about right. Q. And your counsel will have an opportunity to correct me if I am wrong. And the pH for .417 molar is about .4. A. Okay. Q. I mean, would you like to do the calculation to confirm me? A. No. It's a straightforward calculation. Q. So maybe you can write that down that the pH of .083 molar is about 1.1, and the pH of .417 molar is about pH of .4. A. What was the first number? Q. I'm sorry, 1.1. A. What was the hydrogen ion concentration? Q083. A. Zero eight? Q083. I think you may have written that down already. There were two concentrations of perchloric acid given in that figure. A. So it was 0.417 and 0.083 pH of 1.1 and 0.84? Q. Yes. So please go back to the Kit
2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20 21 22 23 24	 you like to confirm that it is 83 millimolars? A. No. I'll take your word for it. Q. And 5 millimoles of perchloric acid in 12 mils. I calculated it was 417 millimolars. Do you want to confirm that it is 417 millimolar? A. If I bought the first, I bought the second. Q. I am going to ask you now to do a calculation of pHs. And I will provide you with some information so use that table or use that piece of paper. The first piece of information I'll provide to you is that the formula for determining pH is pH equals minus log of the proton concentration is .083 molar, pH would be the minus log of .083, correct? A. That is correct. Q. And likewise, when the hydrogen the proton concentration is .417 molar, the pH will be the minus log of .417, correct? A. Yes. 	2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20 21 22	 1.1. A. Sounds about right. Q. And your counsel will have an opportunity to correct me if I am wrong. And the pH for .417 molar is about .4. A. Okay. Q. I mean, would you like to do the calculation to confirm me? A. No. It's a straightforward calculation. Q. So maybe you can write that down that the pH of .083 molar is about 1.1, and the pH of .417 molar is about pH of .4. A. What was the first number? Q. I'm sorry, 1.1. A. What was the hydrogen ion concentration? Q083. A. Zero eight? Q083. I think you may have written that down already. There were two concentrations of perchloric acid given in that figure. A. So it was 0.417 and 0.083 pH of 1.1 and 0.84?

	ya Kolnesberg, Fli.D.		
1	Page 189 there is a sentence that starts with "DNA is stable	1	Page 190 DNA is stable, correct?
2	over."	2	A. That is correct.
3	Do you see that?	3	Q. And pH of 0.4, the pH of perchloric acid
4	A. Yes.	4	at .417 molar is also outside the range of 2.7 to
5	Q. And Kit writes "DNA is stable over the	5	12 where DNA is stable, correct?
6	approximate pH range of 2.7 to 12	6	A. That is correct.
7	MR. ZIMMERMAN: That's not the same. You	7	Q. So the concentration of perchloric acid
8	said that is the start of the sentence?	8	that was used to deprotect the allyl in the Boss
9	MR. SCHWARTZ: I said about eight lines	9	deprotection reaction would denature DNA, correct?
10		10	A. The Kit reference suggests that it would.
11	stable over."	11	Q. And that deprotection reaction in Boss
12	MR. ZIMMERMAN: There is not a sentence	12	would not be considered a mild condition that would
13	that starts with that.	13	not denature DNA, correct?
14	MR. SCHWARTZ: It's in the middle of the	14	A. That is correct.
15	sentence. I apologize.	15	Q. Let's switch topics for a minute for a
16		16	few minutes, and let's talk about depurination. If
17	Q. But do you see where I am?	17	it's been known before 2000 that glycosidic
18	-	18	linkages and purines are susceptible to acid
19	Q. And it says "DNA is stable over the	19	hydrolysis, correct?
20	-	20	A. That is correct.
21		21	Q. I am going to mark the paper.
22		22	(Exhibit 2057 was marked for
23		23	identification.)
24	Q. So pH 1.1, the pH of perchloric acid at	24	MR. SCHWARTZ: This is, again, this is
25		25	one of these papers that was present in only one
1	Page 191 IPR, but not all the IPRs, so we're going to mark	1	Page 192 this one?
2		2	MR. SCHWARTZ: This is marked as 2057.
3	2057.	3	BY MR. SCHWARTZ
4	MR. ZIMMERMAN: So in the case where	4	Q. So I'm putting in front of you a paper
5	we're not doing the deposition in that case today,	5	entitled "Instability and Decay of the Primary
6	and the case that you refused to do the deposition		Structure of DNA" by Lindahl, which was published
7	on that case today, you are marking the exhibits		in 1993. Now, please draw your attention to the
8	from that case.	8	first page of Lindahl. It's Page 709. And on the
9	MR. SCHWARTZ: Not the exhibits from that	9	left side of page 709 is a section entitled "DNA
10		10	Hydrolysis."
11	•	11	Do you see that?
12		12	A. Ido.
13		13	Q. And please draw your attention to the
14		14	sentence that begins five lines down. It starts
15	•	15	with "The instability of DNA."
16		16	Do you see that?
17		17	A. I do.
18	• •	18	Q. Lindahl writes "The instability of DNA
19	-	19	glyclosal bonds under physiological solvent
20		20	conditions was investigated 20 years ago. It was
21	5	21	measured by using DNA with carbon 14-labeled purine
22		22	or pyrimidine residues and determining the rates of
23		23	release of free bases as a function of temperature,
24		24	pH, ionic strength, and nucleic acid secondary
25		25	

FIO	/d Romesberg, Ph.D.		University in the City of New Yor
1	Page 193 That is what Lindahl writes, correct?	1	Page 194 abstract. The abstract reads "The rate of
2	A. That is what is written.	2	depurination of double stranded bacillus subtilis
3	Q. And Lindahl cites to references five	3	DNA radio actively labeled in the purine residues
4	through seven in support for that statement,	4	has been followed as a function of temperature, pH,
5	correct?	5	and ionic strength. In the magnesium containing
6	A. That is correct.	6	buffer of physiological ionic strength, the rate
7	Q. And please turn to the references list.	7	constant for depurination of DNA is 4 times 10 to
8	And reference five is a paper by Lindahl and Nyberg	8	the minus ninth per second at 70 degrees and pH
9	published in 1972, correct?		7.4."
10	A. That is correct.	9 10	That's what the authors write, correct?
11	MR. SCHWARTZ: I am going to mark that	11	A. That is what is written.
12	paper. That is going to be 2087, Court Reporter.	12	Q. Please turn to page 3616 of the paper,
13	(Exhibit 2087 was marked for	13	and please draw your attention to figure nine at
14	identification.)	14	the top of the page. Figure nine shows the pH
15	MR. ZIMMERMAN: Is this already of record	15	dependence of the rate of acid catalyzed
16	in any of the IPRs?	16	depurination of DNA, correct?
17	MR. SCHWARTZ: No.	17	A. It does.
18	BY MR. SCHWARTZ:	18	Q. And if you compare figure nine to the
19	Q. So I am putting in front of you a	19	statement we just read in the abstract, the rate of
20	document entitled "Rate of Depurination of Native	20	depurination reported in the abstract of four times
21	Deoxyribonucleic Acid" by Lindahl and Nyberg,	21	10 to the minus nine per second at pH 7.4 is
22	published in 1972. This is reference 5 in Lindahl	22	consistent with where the dotted line in figure
23	1993, correct?	23	nine intersects the X axis, correct?
24	A. It appears to be.	24	A. Yeah, I guess it is. It's a little hard
25	Q. Please direct your attention to the	25	to read, but I guess, yes.
<u> </u>	Page 195		Page 196
1	Q. And figure nine shows that as the pH	1	Q. We were just talking about the logs. We
2	becomes more the acidic, the rate of acid catalyzed	2	can do the calculation. I know you don't like to
3	depurination greatly increases, correct?	3	do calculations, but we're talking about four times
4	A. It increases, yes.	4	10 to the minus nine per second at pH 7.4?
5	Q. And if you drop from pH 7.4 to about	5	A. So four times 10 to the minus it's
6	pH 4, the rate of acid catalyzed depurination of	6	just that rapidly, again, is a relative term. That
7	DNA increases about three logs, correct?	7	is what it is.
8	A. That is correct.	8	Q. And go back to Boss, please,
9	Q. That is an increase of about a thousand	9	Exhibit 1035. Let's look at Table 1, and we
10	fold, correct?	10	calculated that the pH of the allyl deprotection
11	A. Three logs is a thousand fold.	11	reactions that use perchloric acid is between 1.1
12	Q. And if we were to extrapolate figure nine	12	and 0.4, correct? We put that on that piece of
13	to pH 1, the rate of acid catalyzed depurination of	13	paper?
14	DNA could increase by about another three logs?	14	A. The pHs, yes.
15	A. If that same linear relationship holds,	15	Q. So let me ask the question again so we
16	then that's correct.	16 17	can get a clean answer.
17	Q. And that would be an increase of about a million fold from pH 7.4 right?	17 10	We calculated that the pH of the allyl
18 19	million fold from pH 7.4, right? A. That would be correct.	18 19	deprotection reactions that use perchloric acid in Boss is between 1.1 and 0.4, correct?
20	Q. So Lindahl shows that DNA is rapidly	19 20	A. Yes.
20	depurinated in strong acid, correct?	20 21	A. Yes. Q. And Lindahl shows that those conditions
21	A. Well, it shows it down to pH 4.5.	21 22	will lead to rapid DNA depurination all the way
	A. VIGH, ILAHUWA ILUUWH IU UL 4.0.	~~	
22	•	23	down to nHs below 1_correct?
23 24	Q. And he shows that it's rapidly	23 24	down to pHs below 1, correct? MR_ZIMMERMAN [·] Objection
23 24 25	•	23 24 25	down to pHs below 1, correct? MR. ZIMMERMAN: Objection. Mischaracterizes the reference. Assumes facts not

1	in evidence. Page 197	1	Page 198 A. So he doesn't show anything about pH 1,
2	THE WITNESS: Lindahl shows rates, I	2	
3	believe, down to pH 4.5, and the pH and it shows	3	Q. He does show that it would be depurinated
4	pH rates for that that vary from four times 10 to	4	at pH 4.5?
5	the minus nine, and up by about three orders of	5	A. Yes.
6	magnitude as we just discussed.	6	Q. And if you dropped it down to pH 1.1,
7	BY MR. SCHWARTZ:	7	would you also expect depurination at pH 1.1?
8	Q. And if we extrapolate from that graph,	8	A. I would expect that. My only point was
9	assuming you can extrapolate from the graph.	9	that Lindahl does not actually show that. But I
10	A. Well, Lindahl does not show that.	10	would expect that from the logic we just walked
11	Q. I know.	11	through.
12	A. If you extrapolate it and it remains	12	0
13	linear, then you can multiply that by another	13	expect that there would be depurination?
14	thousand.	14	A. Yes, I would.
15	Q. So it would be a million fold if you did	15	Q. And conditions that lead to DNA
16	that extrapolation?	16	depurination would not be considered mild
17	A. If it's linear over that range, then	17	-
18	would that be correct.	18	A. That is correct. I don't know why I'm
19	Q. And Lindahl shows that in pHs between 1.4	19	adding this, but just for the record, I wasn't
20	and 0.4 would be expected to lead to DNA	20	suggesting that they were. And I know you know
21	depurination, correct?	21	that, so why am I saying that.
22	A. Lindahl does not I would have to look	22	Q. I am trying to understand what you just
23	at this carefully, but I do not think Lindahl	23	
24	reports stabilities experiments under pH of 4.5.	24	
25	Q. Right.	25	
	<		
1	Page 199 suggesting, nor would anyone suggest that pH	1	Page 200 MR. ZIMMERMAN: Objection. Asked and
1			answered.
3	useful for a DNA would be considered mild for a	3	THE WITNESS: I hope that I clarified
		4	
4	DNA reaction. As I tried to explain, this Boss reference added perchloric acid, and I was simply	5	BY MR. SCHWARTZ:
-	including this reference to illustrate that water	6	Q. You used it in your declaration to say
	did not poison the plate and catalyze reaction.	-	that allyl deprotection was a mild condition,
8	The reaction that's much closer to	8

	yu Komesberg, Fil.D.				
1	Page 201 Again, please look at Table 1. All of the allyl	1	Page 202 Q. Of a protecting group?		
2	deprotection conditions in Boss are between three	2	A. You're not sequencing the protecting		
3	hours and six days, correct?	3	group here.		
4	A. That is correct.	4	Q. Do you want to go back to your testimony?		
5	Q. And three hours to six days is not	5	We can go back to it.		
6	consistent with SBS, is it?	6	A. Sure. Let's go back to it.		
7	A. Three hours, as we went before, depending	7	Q. Okay. It was in IPR2013-00517. That was		
8	on what requirements you insisted on, what	8	Exhibit 2007, and page 25.		
9	efficiency meant to you, what applications you were	9	A. If I could take a minute to read this.		
10	interested in. Maybe six days, very unlikely.	10	Q. Do you know where I'm directing you to?		
11	Q. You don't remember your testimony when	11	A. Well, 25 is a pretty short very little		
12	you said that three hours was not consistent with	12	text on 25, so I assume it's the text.		
13	SBS?	13	Q. It is where it says "Furthermore, the		
14	A. In the context of what I was describing	14	amount of time required."		
15	then, that is what I said, and that is what I	15	Do you see that?		
16	meant. If you relax one's standards, three hours	16	A. Yes, I do.		
17	would not be great. It would take a very long	17	Q. And you write: "Furthermore, the amount		
18	time, but it is not per se inconsistent with	18	of time required to achieve those yields, three		
19	running a sequencing by synthesis reaction.	19	hours to multiple days, would not have been		
20	Q. But your position in those other IPRs was	20	expected to fulfill the rapid deprotection		
21	that three hours was not compatible with SBS. That	21	requirement of Tsien's DNA sequencing method."		
22	was your position there, correct?	22	You wrote that, right?		
23	A. I believe I was stating something about	23	A. Yeah, and so just to be very clear with		
24	whether or not it satisfied the requirements of	24	what I just said, and I was correct. I was talking		
25	efficient high-throughput sequencing.	25	about fulfilling the rapid requirements or the		
	Page 203		Page 204		
1	high-throughput, the fast sequence requirements of	1	of paper where you have your handwritten		
1		1 2

23	high-throughput, the fast sequence requirements of Tsien. The question you just asked me was	2 3	of paper where you have your handwritten calculations and notes on. (Exhibit 2090 was marked for		
2 3 4	high-throughput, the fast sequence requirements of Tsien. The question you just asked me was sequencing by synthesis compatible with three	2 3 4	of paper where you have your handwritten calculations and notes on. (Exhibit 2090 was marked for identification.)		
2 3 4 5	high-throughput, the fast sequence requirements of Tsien. The question you just asked me was sequencing by synthesis compatible with three hours. And the answer I gave then was, yes. Maybe	2 3 4 5	of paper where you have your handwritten calculations and notes on. (Exhibit 2090 was marked for identification.) MR. SCHWARTZ: I will start with one patent. I think we all agree that the specifications are the same for the patents. If		
2 3 4 5	high-throughput, the fast sequence requirements of Tsien. The question you just asked me was sequencing by synthesis compatible with three hours. And the answer I gave then was, yes. Maybe not very efficient, but I wasn't answering whether it fulfilled a requirement for being fast as I read Tsien.	2 3 4 5 6	of paper where you have your handwritten calculations and notes on. (Exhibit 2090 was marked for identification.) MR. SCHWARTZ: I will start with one patent. I think we all agree that the specifications are the same for the patents. If you would prefer I can put all four patents.		
2 3 4 5 6 7 8 9	high-throughput, the fast sequence requirements of Tsien. The question you just asked me was sequencing by synthesis compatible with three hours. And the answer I gave then was, yes. Maybe not very efficient, but I wasn't answering whether it fulfilled a requirement for being fast as I read Tsien. Q. It doesn't, but it doesn't you agree	2 3 4 5 6 7 8 9	of paper where you have your handwritten calculations and notes on. (Exhibit 2090 was marked for identification.) MR. SCHWARTZ: I will start with one patent. I think we all agree that the specifications are the same for the patents. If you would prefer I can put all four patents. MR. ZIMMERMAN: It's up to you. If		
2 3 4 5 6 7 8 9 10	high-throughput, the fast sequence requirements of Tsien. The question you just asked me was sequencing by synthesis compatible with three hours. And the answer I gave then was, yes. Maybe not very efficient, but I wasn't answering whether it fulfilled a requirement for being fast as I read Tsien. Q. It doesn't, but it doesn't you agree it doesn't fulfill Tsien's requirement for rapid	2 3 4 5 6 7 8 9 10	of paper where you have your handwritten calculations and notes on. (Exhibit 2090 was marked for identification.) MR. SCHWARTZ: I will start with one patent. I think we all agree that the specifications are the same for the patents. If you would prefer I can put all four patents. MR. ZIMMERMAN: It's up to you. If you're going to ask him about the claims, he needs		
2 3 4 5 6 7 8 9 10 11	high-throughput, the fast sequence requirements of Tsien. The question you just asked me was sequencing by synthesis compatible with three hours. And the answer I gave then was, yes. Maybe not very efficient, but I wasn't answering whether it fulfilled a requirement for being fast as I read Tsien. Q. It doesn't, but it doesn't you agree it doesn't fulfill Tsien's requirement for rapid deprotection?	2 3 4 5 6 7 8 9 10 11	of paper where you have your handwritten calculations and notes on. (Exhibit 2090 was marked for identification.) MR. SCHWARTZ: I will start with one patent. I think we all agree that the specifications are the same for the patents. If you would prefer I can put all four patents. MR. ZIMMERMAN: It's up to you. If you're going to ask him about the claims, he needs all four. If you're asking about the spec, one is		
2 3 4 5 6 7 8 9 10 11 12	 high-throughput, the fast sequence requirements of Tsien. The question you just asked me was sequencing by synthesis compatible with three hours. And the answer I gave then was, yes. Maybe not very efficient, but I wasn't answering whether it fulfilled a requirement for being fast as I read Tsien. Q. It doesn't, but it doesn't you agree it doesn't fulfill Tsien's requirement for rapid deprotection? A. That is what I testified here, and, 	2 3 4 5 6 7 8 9 10 11 12	of paper where you have your handwritten calculations and notes on. (Exhibit 2090 was marked for identification.) MR. SCHWARTZ: I will start with one patent. I think we all agree that the specifications are the same for the patents. If you would prefer I can put all four patents. MR. ZIMMERMAN: It's up to you. If you're going to ask him about the claims, he needs all four. If you're asking about the spec, one is probably sufficient.		
2 3 4 5 6 7 8 9 10 11 12 13	high-throughput, the fast sequence requirements of Tsien. The question you just asked me was sequencing by synthesis compatible with three hours. And the answer I gave then was, yes. Maybe not very efficient, but I wasn't answering whether it fulfilled a requirement for being fast as I read Tsien. Q. It doesn't, but it doesn't you agree it doesn't fulfill Tsien's requirement for rapid deprotection? A. That is what I testified here, and, again, it doesn't seem like it it does not seem	2 3 4 5 6 7 8 9 10 11 12 13	of paper where you have your handwritten calculations and notes on. (Exhibit 2090 was marked for identification.) MR. SCHWARTZ: I will start with one patent. I think we all agree that the specifications are the same for the patents. If you would prefer I can put all four patents. MR. ZIMMERMAN: It's up to you. If you're going to ask him about the claims, he needs all four. If you're asking about the spec, one is probably sufficient. MR. SCHWARTZ: Well, let's start with one		
2 3 4 5 6 7 8 9 10 11 12 13 14	 high-throughput, the fast sequence requirements of Tsien. The question you just asked me was sequencing by synthesis compatible with three hours. And the answer I gave then was, yes. Maybe not very efficient, but I wasn't answering whether it fulfilled a requirement for being fast as I read Tsien. Q. It doesn't, but it doesn't you agree it doesn't fulfill Tsien's requirement for rapid deprotection? A. That is what I testified here, and, again, it doesn't seem like it it does not seem like it would fulfill what Tsien had in mind. But 	2 3 4 5 6 7 8 9 10 11 12 13 14	of paper where you have your handwritten calculations and notes on. (Exhibit 2090 was marked for identification.) MR. SCHWARTZ: I will start with one patent. I think we all agree that the specifications are the same for the patents. If you would prefer I can put all four patents. MR. ZIMMERMAN: It's up to you. If you're going to ask him about the claims, he needs all four. If you're asking about the spec, one is probably sufficient. MR. SCHWARTZ: Well, let's start with one at a time then.		
2 3 4 5 6 7 8 9 10 11 12 13 14 15	high-throughput, the fast sequence requirements of Tsien. The question you just asked me was sequencing by synthesis compatible with three hours. And the answer I gave then was, yes. Maybe not very efficient, but I wasn't answering whether it fulfilled a requirement for being fast as I read Tsien. Q. It doesn't, but it doesn't you agree it doesn't fulfill Tsien's requirement for rapid deprotection? A. That is what I testified here, and, again, it doesn't seem like it it does not seem like it would fulfill what Tsien had in mind. But that was not the way that was not the question	2 3 4 5 6 7 8 9 10 11 12 13 14 15	of paper where you have your handwritten calculations and notes on. (Exhibit 2090 was marked for identification.) MR. SCHWARTZ: I will start with one patent. I think we all agree that the specifications are the same for the patents. If you would prefer I can put all four patents. MR. ZIMMERMAN: It's up to you. If you're going to ask him about the claims, he needs all four. If you're asking about the spec, one is probably sufficient. MR. SCHWARTZ: Well, let's start with one at a time then. (Exhibit 1001 was marked for		
2 3 4 5 6 7 8 9 10 11 12 13 14 15 16	 high-throughput, the fast sequence requirements of Tsien. The question you just asked me was sequencing by synthesis compatible with three hours. And the answer I gave then was, yes. Maybe not very efficient, but I wasn't answering whether it fulfilled a requirement for being fast as I read Tsien. Q. It doesn't, but it doesn't you agree it doesn't fulfill Tsien's requirement for rapid deprotection? A. That is what I testified here, and, again, it doesn't seem like it it does not seem like it would fulfill what Tsien had in mind. But that was not the way that was not the question you asked me a moment ago. 	2 3 4 5 6 7 8 9 10 11 12 13 14 15 16	of paper where you have your handwritten calculations and notes on. (Exhibit 2090 was marked for identification.) MR. SCHWARTZ: I will start with one patent. I think we all agree that the specifications are the same for the patents. If you would prefer I can put all four patents. MR. ZIMMERMAN: It's up to you. If you're going to ask him about the claims, he needs all four. If you're asking about the spec, one is probably sufficient. MR. SCHWARTZ: Well, let's start with one at a time then. (Exhibit 1001 was marked for identification.)		
2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17	 high-throughput, the fast sequence requirements of Tsien. The question you just asked me was sequencing by synthesis compatible with three hours. And the answer I gave then was, yes. Maybe not very efficient, but I wasn't answering whether it fulfilled a requirement for being fast as I read Tsien. Q. It doesn't, but it doesn't you agree it doesn't fulfill Tsien's requirement for rapid deprotection? A. That is what I testified here, and, again, it doesn't seem like it it does not seem like it would fulfill what Tsien had in mind. But that was not the way that was not the question you asked me a moment ago. Q. So none of Boss's reaction conditions 	2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17	of paper where you have your handwritten calculations and notes on. (Exhibit 2090 was marked for identification.) MR. SCHWARTZ: I will start with one patent. I think we all agree that the specifications are the same for the patents. If you would prefer I can put all four patents. MR. ZIMMERMAN: It's up to you. If you're going to ask him about the claims, he needs all four. If you're asking about the spec, one is probably sufficient. MR. SCHWARTZ: Well, let's start with one at a time then. (Exhibit 1001 was marked for identification.) BY MR. SCHWARTZ:		
2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18	 high-throughput, the fast sequence requirements of Tsien. The question you just asked me was sequencing by synthesis compatible with three hours. And the answer I gave then was, yes. Maybe not very efficient, but I wasn't answering whether it fulfilled a requirement for being fast as I read Tsien. Q. It doesn't, but it doesn't you agree it doesn't fulfill Tsien's requirement for rapid deprotection? A. That is what I testified here, and, again, it doesn't seem like it it does not seem like it would fulfill what Tsien had in mind. But that was not the way that was not the question you asked me a moment ago. Q. So none of Boss's reaction conditions satisfied Tsien's requirement for rapid 	2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18	of paper where you have your handwritten calculations and notes on. (Exhibit 2090 was marked for identification.) MR. SCHWARTZ: I will start with one patent. I think we all agree that the specifications are the same for the patents. If you would prefer I can put all four patents. MR. ZIMMERMAN: It's up to you. If you're going to ask him about the claims, he needs all four. If you're asking about the spec, one is probably sufficient. MR. SCHWARTZ: Well, let's start with one at a time then. (Exhibit 1001 was marked for identification.) BY MR. SCHWARTZ: Q. So I am putting in front of you		
2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19	 high-throughput, the fast sequence requirements of Tsien. The question you just asked me was sequencing by synthesis compatible with three hours. And the answer I gave then was, yes. Maybe not very efficient, but I wasn't answering whether it fulfilled a requirement for being fast as I read Tsien. Q. It doesn't, but it doesn't you agree it doesn't fulfill Tsien's requirement for rapid deprotection? A. That is what I testified here, and, again, it doesn't seem like it it does not seem like it would fulfill what Tsien had in mind. But that was not the way that was not the question you asked me a moment ago. Q. So none of Boss's reaction conditions satisfied Tsien's requirement for rapid deprotection, correct? 	2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 9	of paper where you have your handwritten calculations and notes on. (Exhibit 2090 was marked for identification.) MR. SCHWARTZ: I will start with one patent. I think we all agree that the specifications are the same for the patents. If you would prefer I can put all four patents. MR. ZIMMERMAN: It's up to you. If you're going to ask him about the claims, he needs all four. If you're asking about the spec, one is probably sufficient. MR. SCHWARTZ: Well, let's start with one at a time then. (Exhibit 1001 was marked for identification.) BY MR. SCHWARTZ: Q. So I am putting in front of you Exhibit 1001. This happens to be the U.S. patent		
2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20	 high-throughput, the fast sequence requirements of Tsien. The question you just asked me was sequencing by synthesis compatible with three hours. And the answer I gave then was, yes. Maybe not very efficient, but I wasn't answering whether it fulfilled a requirement for being fast as I read Tsien. Q. It doesn't, but it doesn't you agree it doesn't fulfill Tsien's requirement for rapid deprotection? A. That is what I testified here, and, again, it doesn't seem like it it does not seem like it would fulfill what Tsien had in mind. But that was not the way that was not the question you asked me a moment ago. Q. So none of Boss's reaction conditions satisfied Tsien's requirement for rapid deprotection, correct? A. I would agree with that. 	2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20	of paper where you have your handwritten calculations and notes on. (Exhibit 2090 was marked for identification.) MR. SCHWARTZ: I will start with one patent. I think we all agree that the specifications are the same for the patents. If you would prefer I can put all four patents. MR. ZIMMERMAN: It's up to you. If you're going to ask him about the claims, he needs all four. If you're asking about the spec, one is probably sufficient. MR. SCHWARTZ: Well, let's start with one at a time then. (Exhibit 1001 was marked for identification.) BY MR. SCHWARTZ: Q. So I am putting in front of you Exhibit 1001. This happens to be the U.S. patent 9718852 to Ju, et al. This is a patent that is at		
2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20 21	 high-throughput, the fast sequence requirements of Tsien. The question you just asked me was sequencing by synthesis compatible with three hours. And the answer I gave then was, yes. Maybe not very efficient, but I wasn't answering whether it fulfilled a requirement for being fast as I read Tsien. Q. It doesn't, but it doesn't you agree it doesn't fulfill Tsien's requirement for rapid deprotection? A. That is what I testified here, and, again, it doesn't seem like it it does not seem like it would fulfill what Tsien had in mind. But that was not the way that was not the question you asked me a moment ago. Q. So none of Boss's reaction conditions satisfied Tsien's requirement for rapid deprotection, correct? A. I would agree with that. MR. SCHWARTZ: I need to ask a question. 	2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20 21	of paper where you have your handwritten calculations and notes on. (Exhibit 2090 was marked for identification.) MR. SCHWARTZ: I will start with one patent. I think we all agree that the specifications are the same for the patents. If you would prefer I can put all four patents. MR. ZIMMERMAN: It's up to you. If you're going to ask him about the claims, he needs all four. If you're asking about the spec, one is probably sufficient. MR. SCHWARTZ: Well, let's start with one at a time then. (Exhibit 1001 was marked for identification.) BY MR. SCHWARTZ: Q. So I am putting in front of you Exhibit 1001. This happens to be the U.S. patent 9718852 to Ju, et al. This is a patent that is at issue in these IPRs, correct, Dr. Romesberg?		
2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20 21 22	high-throughput, the fast sequence requirements of Tsien. The question you just asked me was sequencing by synthesis compatible with three hours. And the answer I gave then was, yes. Maybe not very efficient, but I wasn't answering whether it fulfilled a requirement for being fast as I read Tsien. Q. It doesn't, but it doesn't you agree it doesn't fulfill Tsien's requirement for rapid deprotection? A. That is what I testified here, and, again, it doesn't seem like it it does not seem like it would fulfill what Tsien had in mind. But that was not the way that was not the question you asked me a moment ago. Q. So none of Boss's reaction conditions satisfied Tsien's requirement for rapid deprotection, correct? A. I would agree with that. MR. SCHWARTZ: I need to ask a question. I'd like to go back to the patents. We	2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20 21 22	of paper where you have your handwritten calculations and notes on. (Exhibit 2090 was marked for identification.) MR. SCHWARTZ: I will start with one patent. I think we all agree that the specifications are the same for the patents. If you would prefer I can put all four patents. MR. ZIMMERMAN: It's up to you. If you're going to ask him about the claims, he needs all four. If you're asking about the spec, one is probably sufficient. MR. SCHWARTZ: Well, let's start with one at a time then. (Exhibit 1001 was marked for identification.) BY MR. SCHWARTZ: Q. So I am putting in front of you Exhibit 1001. This happens to be the U.S. patent 9718852 to Ju, et al. This is a patent that is at issue in these IPRs, correct, Dr. Romesberg? A. That is one of them, that is correct.		
2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20 21 22 23	high-throughput, the fast sequence requirements of Tsien. The question you just asked me was sequencing by synthesis compatible with three hours. And the answer I gave then was, yes. Maybe not very efficient, but I wasn't answering whether it fulfilled a requirement for being fast as I read Tsien. Q. It doesn't, but it doesn't you agree it doesn't fulfill Tsien's requirement for rapid deprotection? A. That is what I testified here, and, again, it doesn't seem like it it does not seem like it would fulfill what Tsien had in mind. But that was not the way that was not the question you asked me a moment ago. Q. So none of Boss's reaction conditions satisfied Tsien's requirement for rapid deprotection, correct? A. I would agree with that. MR. SCHWARTZ: I need to ask a question. I'd like to go back to the patents. We have not talked about the patents yet. The patents	2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20 21 22 23	of paper where you have your handwritten calculations and notes on. (Exhibit 2090 was marked for identification.) MR. SCHWARTZ: I will start with one patent. I think we all agree that the specifications are the same for the patents. If you would prefer I can put all four patents. MR. ZIMMERMAN: It's up to you. If you're going to ask him about the claims, he needs all four. If you're asking about the spec, one is probably sufficient. MR. SCHWARTZ: Well, let's start with one at a time then. (Exhibit 1001 was marked for identification.) BY MR. SCHWARTZ: Q. So I am putting in front of you Exhibit 1001. This happens to be the U.S. patent 9718852 to Ju, et al. This is a patent that is at issue in these IPRs, correct, Dr. Romesberg? A. That is one of them, that is correct. Q. It is a patent that you considered in one		
2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20 21 22	high-throughput, the fast sequence requirements of Tsien. The question you just asked me was sequencing by synthesis compatible with three hours. And the answer I gave then was, yes. Maybe not very efficient, but I wasn't answering whether it fulfilled a requirement for being fast as I read Tsien. Q. It doesn't, but it doesn't you agree it doesn't fulfill Tsien's requirement for rapid deprotection? A. That is what I testified here, and, again, it doesn't seem like it it does not seem like it would fulfill what Tsien had in mind. But that was not the way that was not the question you asked me a moment ago. Q. So none of Boss's reaction conditions satisfied Tsien's requirement for rapid deprotection, correct? A. I would agree with that. MR. SCHWARTZ: I need to ask a question. I'd like to go back to the patents. We	2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20 21 22	of paper where you have your handwritten calculations and notes on. (Exhibit 2090 was marked for identification.) MR. SCHWARTZ: I will start with one patent. I think we all agree that the specifications are the same for the patents. If you would prefer I can put all four patents. MR. ZIMMERMAN: It's up to you. 1	Page 205 Q. Why don't we turn to the claims.	1	Page 206 allyl as small.
2	A. Do you want to point me to a column.	2	Q. What is your understanding of the
3	Q. I'm just going to start with this. It is	3	chemically cleavable chemical group?
4	column 34 of the claims.	4	A. That it can be removed by a reaction that
5	Do you see after the structure it says	5	allows it to by a chemical reaction to produce a
6	wherein RA represents a small chemically cleavable	6	free three-prong hydroxyl group that is compatible
7	chemical group capping the oxygen at the 3'	7	with continued DNA synthesis.
8	position of the deoxyribose of the	8	Q. Do you see in the structure that is drawn
9	deoxyribonucleotide analog."	9	for this particular adenine nucleotide that the tag
10		10	is attached to the base via a structure called Y?
11	-	11	A. A box called Y, yes, I see that.
12	Q. What is your understanding of what is a	12	Q. What is your understanding of the box
13		13	called y?
14		14	A. It would be a cleavable part of a
15		15	cleavable label a link or part of a label that
16	-	16	would attach what he calls the tag.
17	-	17	Q. So you understand that the tag is not
18		18	directly connected to the base, correct?
19	-	19	A. Yes. I mean, we'll get a little semantic
20		20	talking about why the tag and why start and stop,
21	Do you want me to talk about small	21	because they're all going to be chemical bonds, but
22		22	clearly the spirit here is that there is a part
23		23	that is cleavable that will separate the
24		24	fluorophore or the tag from the nuclear base.
25		25	Q. Is it your understanding that the term
		23	w . Is it your understanding that the term
1	Page 207 small in the other patents which I can put in	1	Page 208 Allyl ethers are cleaved by treatment
	front of you if you want, but I'll represent it	2	with mercury II in acetone water. And he points to
3	uses the same terminology would be the same as	3	Gigg and Warren in 1968.
4	you just described, your understanding of small?	4	That is what Tsien writes, right?
5	guess maybe what I'm trying to say is this is not a	5	A. That is correct.
-	unique understanding for this particular structure,	6	Q. Please go back to Exhibit 1012, which is
7	right?	7	your declaration IPR2018-00291.
8	A. I believe that Dr. Ju uses the same	8	MR. ZIMMERMAN: Which exhibit?
9	description in all five of the patents.	9	MR. SCHWARTZ: 1012. It's his
10		10	declaration in IPR2018-00291.
11	chemical cleavable chemical group is, that is	11	BY MR. SCHWARTZ:
12		12	Q. Please turn to page 55. Please draw your
13		12	attention to paragraph 98. In paragraph 98 you
14	•	13	write: "With respect to 3'-O-allyl groups, Tsien
15		14	cites to Gigg, Exhibit 1013, Tsien at 24; 29
16	C C	15	through 30, allyl ethers are cleaved by treatment
17	-	17	with mercury II acetone water. Gigg and Warren
18		17	1968."
		10	That is what you wrote, right?
110	-	20	A. That is correct.
19	or injuracy processing groups are cleaved selectively	2 0	
20	using chemical procedures other than base	24	
20 21	using chemical procedures other than base	21	Q. Tsien's disclosure at page 24, lines 29
20 21 22	hydrolysis. 24 nitrobenzenesulfonyl groups are	22	to 30 is of allyl groups, correct? That's what you
20 21 22 23	hydrolysis. 24 nitrobenzenesulfonyl groups are cleaved rapidly by treatment with nucleophiles such	22 23	to 30 is of allyl groups, correct? That's what you said?
20 21 22 23 24	hydrolysis. 24 nitrobenzenesulfonyl groups are cleaved rapidly by treatment with nucleophiles such as thylphenyl and phenyl sulfate." And he points	22 23 24	to 30 is of allyl groups, correct? That's what you said? A. Yes.
20 21 22 23	hydrolysis. 24 nitrobenzenesulfonyl groups are cleaved rapidly by treatment with nucleophiles such as thylphenyl and phenyl sulfate." And he points	22 23	to 30 is of allyl groups, correct? That's what you said?

-	/d Romesberg, Ph.D.	University in the City of New York			
1	Page 209 both unsubstituted allyIs as well as substitute	1	Page 210 his reaction. Just like people would describe		
2	allyls, correct?	2	templates. That's a very common descriptor. It's		
3	A. No.	3	not that they were all different, it's just you're		
4	Q. It's not a genus that includes those?	4	sequencing templates. Because there are many of		
5	A. You can stretch it to that if you want,	5	them. In a reaction, there is many molecules. So		
6	but it's certainly not common language.	6	if that caused confusion, I apologize. I never		
7	Q. But it is a collection of groups?	7	meant to implicate that there were different allyl		
8	A. You could stretch it to include that.	8	groups. If people wanted, like I said, to stretch		
9	It's kind of a slang, it's kind of a vernacular. A	9	the definition and to sort of use it as a slang,		
10	lot of chemical names have very long complex names,	10	that's certainly not unheard of. But an allyl		
11	and a lot of times people don't want to write them	11	group is something, and it's a very specific thing.		
12	out. A lot of times people don't even know how to	12	And it would be what anyone would think of.		
13	actually name things. So it's very common for	13	Q. But you didn't use the term "allyl		
14	people to use sort of a slang. So that's an allyl	14	group," you used the term "allyl groups." That is		
15	group. That's an allyl-type group. That's got an	15	what you wrote, correct?		
16	allyl in it, so let's call it an allyl protecting	16	A. Yeah, just methyl groups. That's a very		
17	group. It's kind of like that's a red car.	17	common expression. If you want to modify methyl		
18	Q. You yourself use the term 3'-O-allyl	18	groups, you can use this sort of thing. And		
19	groups when you refer to Tsien, right?	19	there's no derivatives of a methyl group. It's		
20	A. That's right. He wasn't doing single	20	sort of like it the plural is referring to		
21	molecule experiments.	21	there are many of them. You're deprotecting		
22	Q. And you also refer to Tsien saying allyl	22	you're not doing a single molecule reaction.		
23	ethers, correct?	23	You're not modifying one. You're removing a lot of		
24	A. Again, not single molecule experiments.	24	allyl groups, one for every molecule in there.		
25	What I meant was that there are many molecules in	25	Q. You know how to use the word group if you

This is the same Gigg and Warren paper cited in Tsien, correct? 		

	va Komesberg, Fil.D.		
1	Page 213 Warren.	1	Page 214 BY MR. SCHWARTZ:
2	MR. SCHWARTZ: You look like you don't	2	Q. So none of those are three carbon allyl
3	agree	3	groups, correct?
4	MR. ZIMMERMAN: Not at all. Did you say	4	A. That is correct.
5	four hours and 10 minutes. We are almost at five	5	Q. And throughout Gigg and Warren there are
6	hours.	6	disclosures of allyl ethers that are both
7	THE VIDEOGRAPHER: I have to do the math.	7	unsubstituted and substituted, correct?
8	MR. ZIMMERMAN: We are 4:49 right now.	8	A. Apparently, yes.
9	BY MR. SCHWARTZ:	9	Q. And throughout Gigg and Warren there are
10	Q. All right. So we that is the same	10	also disclosures of allyl ethers other than a three
11	Gigg and Warren that is cited in Tsien, correct?	11	carbon allyl ether, correct?
12	A. I believe so, yes.	12	A. That is correct. Obviously, from what
13	Q. And please turn to page 1906 of Gigg and	13	you just pointed out. At least.
14	Warren, and on the left side towards the bottom of	14	Q. A reader of Tsien referring back to
15	the page are shown compounds XL, IX, L, and L2.	15	the Gigg and Warren that Tsien refers to for his
16	Do you see that?	16	support of an allyl the allyl groups
17	A. Ido.	17	understood that Tsien's reference to allyl ether is
18	Q. And none of those are three carbon allyl	18	to a collection of ethers shown by Gigg and Warren,
19	ethers, correct?	19	correct?
20	A. I think whatever that is, LI is.	20	A. No. People as I said, people
21	Q. I didn't ask about LI. I said XL, IX, L,	21	sometimes use the word allyl, and describing this
22	and L2.	22	as an allyl ether, while technically still a little
23	A. Right. That is correct.	23	bit weird, is a little less weird than their
24	MR. ZIMMERMAN: He came up with 4:42.	24	generalizing a group of things. But still, the
25	///	25	only thing in here that in here strictly properly

ZIMMERMAN: I just wanted to make sure we are all at the same place. BY MR. SCHWARTZ: Q. And line 23. The patent reads "The MOM" and it draws the structure, CH2OCH3, or allyl, and it draws a structure CH2CH-double bond-CH2 "is used to cap the 3'-OH group using

	d Romesberg, Ph.D.		University in the City of New For
1	to figure 13.	1	Page 218 3:48 p.m.
2	So the patent specification, Dr. Ju's	2	(The videotaped deposition of
3	patent specification, specifically calls the CH2CH	3	FLOYD ROMESBERG, PH.D., VOLUME I,
4	double bond CH2 group the allyl group, correct?		
		4	concluded at 3:48 p.m.)
5	A. As most people would, yeah. It's the	5	
6	allyl group, and he parenthetically draws it out.	6	
7	Q. And that structure is not disclosed in	7	
8	Tsien, correct?	8	
9	A. It effectively is. Its name is disclosed	9	
10	in Tsien. It's not drawn out in a parenthetical	10	
11	manner like this, but in a way that any POSA would	11	
12	have immediately drawn that conclusion.	12	
13	Q. I'm just saying that the structure is not	13	
14	shown in Tsien, is it?	14	
15	A. The structure is not drawn out.	15	
16	Q. Okay.	16	
17	MR. SCHWARTZ: I would like to go off the	17	
18	record if I could. I have to mark up some	18

	Columbia University in the City of New York,	9	today is Patricia Schuler, and she may now swear in
10	pending in the United States Patent and Trademark	10	the witness.
11	Office before the Patent and Appeal Board, Case	11	
12	Nos. IPR2018-00291, IPR2018-00318, IPR2018-00322,	12	FLOYD ROMESBERG, PH.D.,
13	and IPR2018-00385.	13	having been administered an oath, was examined and
14	We are at Knobbe Martens in San Diego,	14	testified as follows:
15	12790 El Camino Real. My name is Daniel Bermudez	15	
	of Aptus Court Reporting located at 600 West	16	FURTHER EXAMINATION
17		17	BY MR. SCHWARTZ:
18	Will counsel please identify yourselves	18	Q. Good morning, Dr. Romesberg.
19	and state whom you represent.	19	A. Good morning.
20	MR. SCHWARTZ: I'm Robert S. Schwartz	20	Q. Is there any reason you can't give
21	representing Columbia, from Fitzpatrick, Cella,	21	truthful testimony today?
	Harper & Scinto. With me is Zack Garrett, also	22	A. No.
	from Fitzpatrick. Sitting next to him is	23	Q. Did you consult with your attorneys
24	Dr. Steven Menchen. Sitting next to him is	24	regarding the substance of your testimony
25	John Light from the Cooper and Dunham firm also	25	yesterday?
			,
1	Page 229 A No I did not	1	Page 230 molecules may occur has been derived from
1	A. No, I did not.	1	molecules may occur has been derived from
2	 A. No, I did not. Q. And did you consult with your attorneys 	2	molecules may occur has been derived from experiments on the reaction of mercury chloride
2 3	 A. No, I did not. Q. And did you consult with your attorneys regarding the substance of what you anticipate 	2 3	molecules may occur has been derived from experiments on the reaction of mercury chloride with DNA."
2 3 4	 A. No, I did not. Q. And did you consult with your attorneys regarding the substance of what you anticipate discussing today? 	2 3 4	molecules may occur has been derived from experiments on the reaction of mercury chloride with DNA." Do you see that Kitt writes that?
2 3 4 5	 A. No, I did not. Q. And did you consult with your attorneys regarding the substance of what you anticipate discussing today? A. No, I did not. 	2 3 4 5	molecules may occur has been derived from experiments on the reaction of mercury chloride with DNA." Do you see that Kitt writes that? A. Yes, I do.
2 3 4 5 6	 A. No, I did not. Q. And did you consult with your attorneys regarding the substance of what you anticipate discussing today? A. No, I did not. Q. I am going to start out by asking you to 	2 3 4 5 6	molecules may occur has been derived from experiments on the reaction of mercury chloride with DNA." Do you see that Kitt writes that? A. Yes, I do. Q. And mercury II is a DNA denaturant,
2 3 4 5 6 7	 A. No, I did not. Q. And did you consult with your attorneys regarding the substance of what you anticipate discussing today? A. No, I did not. Q. I am going to start out by asking you to go back to the Tsien reference. That was 	2 3 4 5 6 7	molecules may occur has been derived from experiments on the reaction of mercury chloride with DNA." Do you see that Kitt writes that? A. Yes, I do. Q. And mercury II is a DNA denaturant, correct?
2 3 4 5 6 7 8	 A. No, I did not. Q. And did you consult with your attorneys regarding the substance of what you anticipate discussing today? A. No, I did not. Q. I am going to start out by asking you to go back to the Tsien reference. That was Exhibit 1013. Please draw your attention to 	2 3 4 5 6 7 8	molecules may occur has been derived from experiments on the reaction of mercury chloride with DNA." Do you see that Kitt writes that? A. Yes, I do. Q. And mercury II is a DNA denaturant, correct? A. It denatures DNA, yes.
2 3 4 5 6 7 8 9	 A. No, I did not. Q. And did you consult with your attorneys regarding the substance of what you anticipate discussing today? A. No, I did not. Q. I am going to start out by asking you to go back to the Tsien reference. That was Exhibit 1013. Please draw your attention to Page 24, and look at Line 29. 	2 3 4 5 6 7 8 9	 molecules may occur has been derived from experiments on the reaction of mercury chloride with DNA." Do you see that Kitt writes that? A. Yes, I do. Q. And mercury II is a DNA denaturant, correct? A. It denatures DNA, yes. Q. Going back to the allyl ethers in Tsien,
2 3 4 5 6 7 8 9 10	 A. No, I did not. Q. And did you consult with your attorneys regarding the substance of what you anticipate discussing today? A. No, I did not. Q. I am going to start out by asking you to go back to the Tsien reference. That was Exhibit 1013. Please draw your attention to Page 24, and look at Line 29. And Tsien writes "Allyl ethers are 	2 3 4 5 6 7 8 9 10	 molecules may occur has been derived from experiments on the reaction of mercury chloride with DNA." Do you see that Kitt writes that? A. Yes, I do. Q. And mercury II is a DNA denaturant, correct? A. It denatures DNA, yes. Q. Going back to the allyl ethers in Tsien, the cleavage method for the allyl ethers cited by
2 3 4 5 6 7 8 9 10 11	 A. No, I did not. Q. And did you consult with your attorneys regarding the substance of what you anticipate discussing today? A. No, I did not. Q. I am going to start out by asking you to go back to the Tsien reference. That was Exhibit 1013. Please draw your attention to Page 24, and look at Line 29. 	2 3 4 5 6 7 8 9	 molecules may occur has been derived from experiments on the reaction of mercury chloride with DNA." Do you see that Kitt writes that? A. Yes, I do. Q. And mercury II is a DNA denaturant, correct? A. It denatures DNA, yes. Q. Going back to the allyl ethers in Tsien, the cleavage method for the allyl ethers cited by
2 3 4 5 6 7 8 9 10 11 12	 A. No, I did not. Q. And did you consult with your attorneys regarding the substance of what you anticipate discussing today? A. No, I did not. Q. I am going to start out by asking you to go back to the Tsien reference. That was Exhibit 1013. Please draw your attention to Page 24, and look at Line 29. And Tsien writes "Allyl ethers are cleaved by treatment with mercury II in acetone water." 	2 3 4 5 6 7 8 9 10 11	 molecules may occur has been derived from experiments on the reaction of mercury chloride with DNA." Do you see that Kitt writes that? A. Yes, I do. Q. And mercury II is a DNA denaturant, correct? A. It denatures DNA, yes. Q. Going back to the allyl ethers in Tsien, the cleavage method for the allyl ethers cited by Tsien is based on the Gigg and Warren reference,
2 3 4 5 6 7 8 9 10 11	 A. No, I did not. Q. And did you consult with your attorneys regarding the substance of what you anticipate discussing today? A. No, I did not. Q. I am going to start out by asking you to go back to the Tsien reference. That was Exhibit 1013. Please draw your attention to Page 24, and look at Line 29. And Tsien writes "Allyl ethers are cleaved by treatment with mercury II in acetone 	2 3 4 5 6 7 8 9 10 11 12	 molecules may occur has been derived from experiments on the reaction of mercury chloride with DNA." Do you see that Kitt writes that? A. Yes, I do. Q. And mercury II is a DNA denaturant, correct? A. It denatures DNA, yes. Q. Going back to the allyl ethers in Tsien, the cleavage method for the allyl ethers cited by Tsien is based on the Gigg and Warren reference, correct? A. That is correct.
2 3 4 5 6 7 8 9 10 11 12 13	 A. No, I did not. Q. And did you consult with your attorneys regarding the substance of what you anticipate discussing today? A. No, I did not. Q. I am going to start out by asking you to go back to the Tsien reference. That was Exhibit 1013. Please draw your attention to Page 24, and look at Line 29. And Tsien writes "Allyl ethers are cleaved by treatment with mercury II in acetone water." That is what Tsien writes, correct? A. That is correct. 	2 3 4 5 6 7 8 9 10 11 12 13	 molecules may occur has been derived from experiments on the reaction of mercury chloride with DNA." Do you see that Kitt writes that? A. Yes, I do. Q. And mercury II is a DNA denaturant, correct? A. It denatures DNA, yes. Q. Going back to the allyl ethers in Tsien, the cleavage method for the allyl ethers cited by Tsien is based on the Gigg and Warren reference, correct? A. That is correct. Q. And if you wouldn't mind, please, going
2 3 4 5 6 7 8 9 10 11 12 13 14	 A. No, I did not. Q. And did you consult with your attorneys regarding the substance of what you anticipate discussing today? A. No, I did not. Q. I am going to start out by asking you to go back to the Tsien reference. That was Exhibit 1013. Please draw your attention to Page 24, and look at Line 29. And Tsien writes "Allyl ethers are cleaved by treatment with mercury II in acetone water." That is what Tsien writes, correct? A. That is correct. Q. Please go back to Exhibit 2086, which was 	2 3 4 5 6 7 8 9 10 11 12 13 14	 molecules may occur has been derived from experiments on the reaction of mercury chloride with DNA." Do you see that Kitt writes that? A. Yes, I do. Q. And mercury II is a DNA denaturant, correct? A. It denatures DNA, yes. Q. Going back to the allyl ethers in Tsien, the cleavage method for the allyl ethers cited by Tsien is based on the Gigg and Warren reference, correct? A. That is correct. Q. And if you wouldn't mind, please, going back to that paper, Exhibit 1046.
2 3 4 5 6 7 8 9 10 11 12 13 14	 A. No, I did not. Q. And did you consult with your attorneys regarding the substance of what you anticipate discussing today? A. No, I did not. Q. I am going to start out by asking you to go back to the Tsien reference. That was Exhibit 1013. Please draw your attention to Page 24, and look at Line 29. And Tsien writes "Allyl ethers are cleaved by treatment with mercury II in acetone water." That is what Tsien writes, correct? A. That is correct. Q. Please go back to Exhibit 2086, which was the Kitt paper we looked at yesterday, 2086. Got 	2 3 4 5 6 7 8 9 10 11 12 13 14 15	 molecules may occur has been derived from experiments on the reaction of mercury chloride with DNA." Do you see that Kitt writes that? A. Yes, I do. Q. And mercury II is a DNA denaturant, correct? A. It denatures DNA, yes. Q. Going back to the allyl ethers in Tsien, the cleavage method for the allyl ethers cited by Tsien is based on the Gigg and Warren reference, correct? A. That is correct. Q. And if you wouldn't mind, please, going
2 3 4 5 6 7 8 9 10 11 12 13 14 15 16	 A. No, I did not. Q. And did you consult with your attorneys regarding the substance of what you anticipate discussing today? A. No, I did not. Q. I am going to start out by asking you to go back to the Tsien reference. That was Exhibit 1013. Please draw your attention to Page 24, and look at Line 29. And Tsien writes "Allyl ethers are cleaved by treatment with mercury II in acetone water." That is what Tsien writes, correct? A. That is correct. Q. Please go back to Exhibit 2086, which was the Kitt paper we looked at yesterday, 2086. Got 	2 3 4 5 6 7 8 9 10 11 12 13 14 15 16	 molecules may occur has been derived from experiments on the reaction of mercury chloride with DNA." Do you see that Kitt writes that? A. Yes, I do. Q. And mercury II is a DNA denaturant, correct? A. It denatures DNA, yes. Q. Going back to the allyl ethers in Tsien, the cleavage method for the allyl ethers cited by Tsien is based on the Gigg and Warren reference, correct? A. That is correct. Q. And if you wouldn't mind, please, going back to that paper, Exhibit 1046. Do you have it? A. I do.
2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18	 A. No, I did not. Q. And did you consult with your attorneys regarding the substance of what you anticipate discussing today? A. No, I did not. Q. I am going to start out by asking you to go back to the Tsien reference. That was Exhibit 1013. Please draw your attention to Page 24, and look at Line 29. And Tsien writes "Allyl ethers are cleaved by treatment with mercury II in acetone water." That is what Tsien writes, correct? A. That is correct. Q. Please go back to Exhibit 2086, which was the Kitt paper we looked at yesterday, 2086. Got it? A. I have it. 	2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18	 molecules may occur has been derived from experiments on the reaction of mercury chloride with DNA." Do you see that Kitt writes that? A. Yes, I do. Q. And mercury II is a DNA denaturant, correct? A. It denatures DNA, yes. Q. Going back to the allyl ethers in Tsien, the cleavage method for the allyl ethers cited by Tsien is based on the Gigg and Warren reference, correct? A. That is correct. Q. And if you wouldn't mind, please, going back to that paper, Exhibit 1046. Do you have it? A. I do. Q. Please draw your attention to Reaction 1
2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19	 A. No, I did not. Q. And did you consult with your attorneys regarding the substance of what you anticipate discussing today? A. No, I did not. Q. I am going to start out by asking you to go back to the Tsien reference. That was Exhibit 1013. Please draw your attention to Page 24, and look at Line 29. And Tsien writes "Allyl ethers are cleaved by treatment with mercury II in acetone water." That is what Tsien writes, correct? A. That is correct. Q. Please go back to Exhibit 2086, which was the Kitt paper we looked at yesterday, 2086. Got it? A. I have it. Q. And please turn to page 59. And please 	2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19	 molecules may occur has been derived from experiments on the reaction of mercury chloride with DNA." Do you see that Kitt writes that? A. Yes, I do. Q. And mercury II is a DNA denaturant, correct? A. It denatures DNA, yes. Q. Going back to the allyl ethers in Tsien, the cleavage method for the allyl ethers cited by Tsien is based on the Gigg and Warren reference, correct? A. That is correct. Q. And if you wouldn't mind, please, going back to that paper, Exhibit 1046. Do you have it? A. I do. Q. Please draw your attention to Reaction 1 on the left side of Page 1904, in Gigg and Warren.
2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20	 A. No, I did not. Q. And did you consult with your attorneys regarding the substance of what you anticipate discussing today? A. No, I did not. Q. I am going to start out by asking you to go back to the Tsien reference. That was Exhibit 1013. Please draw your attention to Page 24, and look at Line 29. And Tsien writes "Allyl ethers are cleaved by treatment with mercury II in acetone water." That is what Tsien writes, correct? A. That is correct. Q. Please go back to Exhibit 2086, which was the Kitt paper we looked at yesterday, 2086. Got it? A. I have it. Q. And please turn to page 59. And please draw your attention to the second full paragraph 	2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20	 molecules may occur has been derived from experiments on the reaction of mercury chloride with DNA." Do you see that Kitt writes that? A. Yes, I do. Q. And mercury II is a DNA denaturant, correct? A. It denatures DNA, yes. Q. Going back to the allyl ethers in Tsien, the cleavage method for the allyl ethers cited by Tsien is based on the Gigg and Warren reference, correct? A. That is correct. Q. And if you wouldn't mind, please, going back to that paper, Exhibit 1046. Do you have it? A. I do. Q. Please draw your attention to Reaction 1 on the left side of Page 1904, in Gigg and Warren. A. I'm sorry. Where?
2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20 21	 A. No, I did not. Q. And did you consult with your attorneys regarding the substance of what you anticipate discussing today? A. No, I did not. Q. I am going to start out by asking you to go back to the Tsien reference. That was Exhibit 1013. Please draw your attention to Page 24, and look at Line 29. And Tsien writes "Allyl ethers are cleaved by treatment with mercury II in acetone water." That is what Tsien writes, correct? A. That is correct. Q. Please go back to Exhibit 2086, which was the Kitt paper we looked at yesterday, 2086. Got it? A. I have it. Q. And please turn to page 59. And please draw your attention to the second full paragraph that starts with "additional evidence." 	2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20 21	 molecules may occur has been derived from experiments on the reaction of mercury chloride with DNA." Do you see that Kitt writes that? A. Yes, I do. Q. And mercury II is a DNA denaturant, correct? A. It denatures DNA, yes. Q. Going back to the allyl ethers in Tsien, the cleavage method for the allyl ethers cited by Tsien is based on the Gigg and Warren reference, correct? A. That is correct. Q. And if you wouldn't mind, please, going back to that paper, Exhibit 1046. Do you have it? A. I do. Q. Please draw your attention to Reaction 1 on the left side of Page 1904, in Gigg and Warren. A. I'm sorry. Where? Q. Reaction 1 on the left side of 1904.
2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20 21 22	 A. No, I did not. Q. And did you consult with your attorneys regarding the substance of what you anticipate discussing today? A. No, I did not. Q. I am going to start out by asking you to go back to the Tsien reference. That was Exhibit 1013. Please draw your attention to Page 24, and look at Line 29. And Tsien writes "Allyl ethers are cleaved by treatment with mercury II in acetone water." That is what Tsien writes, correct? A. That is correct. Q. Please go back to Exhibit 2086, which was the Kitt paper we looked at yesterday, 2086. Got it? A. I have it. Q. And please turn to page 59. And please draw your attention to the second full paragraph that starts with "additional evidence." Do you see that? 	2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20 21 22	 molecules may occur has been derived from experiments on the reaction of mercury chloride with DNA." Do you see that Kitt writes that? A. Yes, I do. Q. And mercury II is a DNA denaturant, correct? A. It denatures DNA, yes. Q. Going back to the allyl ethers in Tsien, the cleavage method for the allyl ethers cited by Tsien is based on the Gigg and Warren reference, correct? A. That is correct. Q. And if you wouldn't mind, please, going back to that paper, Exhibit 1046. Do you have it? A. I do. Q. Please draw your attention to Reaction 1 on the left side of Page 1904, in Gigg and Warren. A. I'm sorry. Where? Q. Reaction 1 on the left side of 1904. Got it?
2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20 21 22 23	 A. No, I did not. Q. And did you consult with your attorneys regarding the substance of what you anticipate discussing today? A. No, I did not. Q. I am going to start out by asking you to go back to the Tsien reference. That was Exhibit 1013. Please draw your attention to Page 24, and look at Line 29. And Tsien writes "Allyl ethers are cleaved by treatment with mercury II in acetone water." That is what Tsien writes, correct? A. That is correct. Q. Please go back to Exhibit 2086, which was the Kitt paper we looked at yesterday, 2086. Got it? A. I have it. Q. And please turn to page 59. And please draw your attention to the second full paragraph that starts with "additional evidence." Do you see that? A. I do. 	2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20 21 22 23	 molecules may occur has been derived from experiments on the reaction of mercury chloride with DNA." Do you see that Kitt writes that? A. Yes, I do. Q. And mercury II is a DNA denaturant, correct? A. It denatures DNA, yes. Q. Going back to the allyl ethers in Tsien, the cleavage method for the allyl ethers cited by Tsien is based on the Gigg and Warren reference, correct? A. That is correct. Q. And if you wouldn't mind, please, going back to that paper, Exhibit 1046. Do you have it? A. I do. Q. Please draw your attention to Reaction 1 on the left side of Page 1904, in Gigg and Warren. A. I'm sorry. Where? Q. Reaction 1 on the left side of 1904. Got it? A. Yes.
2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20 21 22	 A. No, I did not. Q. And did you consult with your attorneys regarding the substance of what you anticipate discussing today? A. No, I did not. Q. I am going to start out by asking you to go back to the Tsien reference. That was Exhibit 1013. Please draw your attention to Page 24, and look at Line 29. And Tsien writes "Allyl ethers are cleaved by treatment with mercury II in acetone water." That is what Tsien writes, correct? A. That is correct. Q. Please go back to Exhibit 2086, which was the Kitt paper we looked at yesterday, 2086. Got it? A. I have it. Q. And please turn to page 59. And please draw your attention to the second full paragraph that starts with "additional evidence." Do you see that? 	2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20 21 22	 molecules may occur has been derived from experiments on the reaction of mercury chloride with DNA." Do you see that Kitt writes that? A. Yes, I do. Q. And mercury II is a DNA denaturant, correct? A. It denatures DNA, yes. Q. Going back to the allyl ethers in Tsien, the cleavage method for the allyl ethers cited by Tsien is based on the Gigg and Warren reference, correct? A. That is correct. Q. And if you wouldn't mind, please, going back to that paper, Exhibit 1046. Do you have it? A. I do. Q. Please draw your attention to Reaction 1 on the left side of Page 1904, in Gigg and Warren. A. I'm sorry. Where? Q. Reaction 1 on the left side of 1904. Got it?

	ya Romesberg, Ph.D.		
1	Page 231 strong basic conditions, and then the vinyl ethers	1	Page 232 You saw that, right?
2	are cleaved by mercury II, correct?	2	A. Yes.
3	A. Yes. I am not reading the first step.	3	Q. And that denatures DNA, correct? And
4	If I could take a second to read this?	4	that cannot be used for SBS, correct?
5	Q. Sure.	5	A. Certainly, at high concentrations
6	A. That seems to be the case, yes.	6	potassium t-butoxide would denature DNA. I don't
7	Q. The structure of allyl ethers is	7	know exactly at what concentration that would
8	different from that of vinyl ethers, correct?	8	occur, but that is a base, and, you know, I think
9	A. Yes.	9	at sufficiently basic conditions, DNA is damaged.
10	Q. And the conversion	10	Q. So a person reading Tsien along with Gigg
11		11	and Warren would not use Gigg's condition for
12	Q. They are different structures?	12	cleavage of allyl ethers for SBS because there
13	-	13	
14	•	14	
15		15	A. I think that is fair.
16		16	(Exhibit 1037 was previously marked for
17		17	
18		18	,
19	•	19	Q. I am going to put another exhibit in
20		20	front of you because I know you don't have enough
21		21	of them already. I am putting in front of you
22	Q. And so the conversion of allyl ethers to	22	Exhibit 1037, which is a paper entitled "A Mild and
23	-	23	Rapid Regeneration of Alcohols from their Allylic
24	conditions. We looked at that where he says	24	Ethers by Chlorotrimethylsilane/Sodium lodide" by

4	acid, correct?	4	Lindahl and Nyberg 1972, and those papers reported
5	A. Yes.	5	that acid catalyzes depurination of nucleotides.
6	MR. ZIMMERMAN: Object to the form of the	6	Do you remember that?
7	question. And just so you know my objection, you	7	A. Yes.
8	made clear yesterday that a POSA was in 2002	8	Q. And conditions that result in
9	THE WITNESS: 2000.	9	depurination of nucleotides are not compatible with
10	MR. ZIMMERMAN: 2000. And you are asking	10	
11	him about something dated after that and assuming a	11	A. If you're depurinating during sequencing
12	POSA would know.	12	reaction, that would not be compatible with
13	So the timing in your question is	13	sequencing by synthesis.
14	nonsensical. So I am objecting as to form.	14	Q. And please go back to the Qian reference
15	MR. SCHWARTZ: Okay.	15	we looked at yesterday, Exhibit 1036, and go back
16	BY MR. SCHWARTZ:	16	to Page 2185 where there was Scheme 2. And please
17	Q. A POSA understood that reacting in allyl	17	look again at the figure legend. The deprotection
18	protecting group, palladium (II) generates acid,	18	of the allyl takes place with palladium (II) and
19	correct?	19	methanol, correct?
20	A. Yes.	20	A. It does.
21	Q. So please	21	Q. And that reaction would be expected to
22	A. Stoichiometric acid, yeah.	22	produce acid, correct?
23	Q. Please go back to the first page of	23	A. It would produce stoichiometric amounts,
24	Hamed strike that.	24	very small amounts of acid compared to a solvent
25	Yesterday we looked at some papers by	25	compared to the adding solvent at millimolar
	Page 241		Page 242
1	concentrations of the sort that we talked about		that was published in 1977 by Pillai and Nandi. Go
	yesterday, and of the sort that Lindahl talked	2	to the abstract. And the abstract reads I'm not
3	about, this would generate the amounts of acid	3	going to read the whole thing. I am going to ask
4	that one proton for every time you deprotected	4	you to look at the second sentence that starts with
5	an allyl. And that's common, and that would be	5	"The results."
6	handled under sequencing by synthesis methods,	6	Do you see that?
7	because I assume that is what we are interested in.	7	"The results indicate that palladium (II)
8	And that would be handled by buffering the system.	8	interacts with both the phosphate and bases of
9	That would be well within the buffer power and	9	DNA."
10	standard for any POSA to deal with.	10	That is what the authors write, correct?
11	Q. But I'm not talking about a different reaction condition. I'm talking specifically about	11	 A. That is correct. Q. And the palladium (II) referred to by
12 13	Qian's reaction condition.	12 13	
14	So in Qian's reaction condition that would		-
14	be expected to produce acid, there is not a buffer	14 15	
16	there, correct?	16	
17	A. It would produce stoichiometric acid.	17	intro they're talking about palladium II, and the
18	MR. SCHWARTZ: I am going to mark a new	18	palladium in palladium chloride is palladium II. I
19	exhibit. Court reporter, this will require a new	19	haven't read this reference to know if that is all
20	number, 2094.	20	they are talking about, but that would seem to be
21	(Exhibit 2094 was marked for	21	consistent with that.
22	identification.)	22	
23	BY MR. SCHWARTZ:	23

In fact, in all cases, it still has a CD an an ORD signal, suggesting that it is still chiral, suggesting there is still duplex. Q. The authors themselves, however, interpret their own results by suggesting that the 		
2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17	lights, left and right polarized. DNA duplex is chiral. Anything that relaxes that chirality at all leads to changes. So if you simply relax the duplex slightly, you get differences in the ORD and CD signals. People don't understand the origins of ORD and CD. It's the only way that we use these signals is by model systems. We say, okay, an alpha helix is like this, and a protein and beta sheet's like this. DNA duplex A form is like this; B form is like this. Little small changes happen all the time, and they are only understandable in the context of a model system. And so if there is no model system to show that, you can't say that it's denatured anything. Slight relaxations of the DNA is common,	2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17	 thing, and sodium is perfectly compatible. Palladium (II) is simply interacting with the nitrogens of the bases in the waters and the phosphates. There's nothing it's just in some respects it's there's no evidence here that palladium (II) is acting as anything other than a counterion in the same way that sodium, which is a cation, would be interacting. But there is nothing in the change in the CRD and the ORD that suggests to me that the DNA is denatured. In fact, in all cases, it still has a CD an an ORD signal, suggesting that it is still chiral, suggesting there is still duplex. Q. The authors themselves, however, interpret their own results by suggesting that the stacking interactions are reduced considerably. 		
2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18	lights, left and right polarized. DNA duplex is chiral. Anything that relaxes that chirality at all leads to changes. So if you simply relax the duplex slightly, you get differences in the ORD and CD signals. People don't understand the origins of ORD and CD. It's the only way that we use these signals is by model systems. We say, okay, an alpha helix is like this, and a protein and beta sheet's like this. DNA duplex A form is like this; B form is like this. Little small changes happen all the time, and they are only understandable in the context of a model system. And so if there is no model system to show that, you can't say that it's denatured anything. Slight relaxations of the DNA is common, it doesn't in any way show that the hydrogen bonds	2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18	 thing, and sodium is perfectly compatible. Palladium (II) is simply interacting with the nitrogens of the bases in the waters and the phosphates. There's nothing it's just in some respects it's there's no evidence here that palladium (II) is acting as anything other than a counterion in the same way that sodium, which is a cation, would be interacting. But there is nothing in the change in the CRD and the ORD that suggests to me that the DNA is denatured. In fact, in all cases, it still has a CD an an ORD signal, suggesting that it is still chiral, suggesting there is still duplex. Q. The authors themselves, however, interpret their own results by suggesting that the stacking interactions are reduced considerably. That is what they say, correct? 		
2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19	lights, left and right polarized. DNA duplex is chiral. Anything that relaxes that chirality at all leads to changes. So if you simply relax the duplex slightly, you get differences in the ORD and CD signals. People don't understand the origins of ORD and CD. It's the only way that we use these signals is by model systems. We say, okay, an alpha helix is like this, and a protein and beta sheet's like this. DNA duplex A form is like this; B form is like this. Little small changes happen all the time, and they are only understandable in the context of a model system. And so if there is no model system to show that, you can't say that it's denatured anything. Slight relaxations of the DNA is common, it doesn't in any way show that the hydrogen bonds are disrupted. It just shows that the duplex is	2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 9	 thing, and sodium is perfectly compatible. Palladium (II) is simply interacting with the nitrogens of the bases in the waters and the phosphates. There's nothing it's just in some respects it's there's no evidence here that palladium (II) is acting as anything other than a counterion in the same way that sodium, which is a cation, would be interacting. But there is nothing in the change in the CRD and the ORD that suggests to me that the DNA is denatured. In fact, in all cases, it still has a CD an an ORD signal, suggesting that it is still chiral, suggesting there is still duplex. Q. The authors themselves, however, interpret their own results by suggesting that the stacking interactions are reduced considerably. That is what they say, correct? A. If they interpret the CD and ORD specter 		
2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20	lights, left and right polarized. DNA duplex is chiral. Anything that relaxes that chirality at all leads to changes. So if you simply relax the duplex slightly, you get differences in the ORD and CD signals. People don't understand the origins of ORD and CD. It's the only way that we use these signals is by model systems. We say, okay, an alpha helix is like this, and a protein and beta sheet's like this. DNA duplex A form is like this; B form is like this. Little small changes happen all the time, and they are only understandable in the context of a model system. And so if there is no model system to show that, you can't say that it's denatured anything. Slight relaxations of the DNA is common, it doesn't in any way show that the hydrogen bonds are disrupted. It just shows that the duplex is slightly relaxed. Its chirality is not identical.	2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20	 thing, and sodium is perfectly compatible. Palladium (II) is simply interacting with the nitrogens of the bases in the waters and the phosphates. There's nothing it's just in some respects it's there's no evidence here that palladium (II) is acting as anything other than a counterion in the same way that sodium, which is a cation, would be interacting. But there is nothing in the change in the CRD and the ORD that suggests to me that the DNA is denatured. In fact, in all cases, it still has a CD an an ORD signal, suggesting that it is still chiral, suggesting there is still duplex. Q. The authors themselves, however, interpret their own results by suggesting that the stacking interactions are reduced considerably. That is what they say, correct? A. If they interpret the CD and ORD specter that way, that's fine, but they're certainly not 		
2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20 21	lights, left and right polarized. DNA duplex is chiral. Anything that relaxes that chirality at all leads to changes. So if you simply relax the duplex slightly, you get differences in the ORD and CD signals. People don't understand the origins of ORD and CD. It's the only way that we use these signals is by model systems. We say, okay, an alpha helix is like this, and a protein and beta sheet's like this. DNA duplex A form is like this; B form is like this. Little small changes happen all the time, and they are only understandable in the context of a model system. And so if there is no model system to show that, you can't say that it's denatured anything. Slight relaxations of the DNA is common, it doesn't in any way show that the hydrogen bonds are disrupted. It just shows that the duplex is slightly relaxed. Its chirality is not identical. There is nothing in that to me there is	2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20 21	 thing, and sodium is perfectly compatible. Palladium (II) is simply interacting with the nitrogens of the bases in the waters and the phosphates. There's nothing it's just in some respects it's there's no evidence here that palladium (II) is acting as anything other than a counterion in the same way that sodium, which is a cation, would be interacting. But there is nothing in the change in the CRD and the ORD that suggests to me that the DNA is denatured. In fact, in all cases, it still has a CD an an ORD signal, suggesting that it is still chiral, suggesting there is still duplex. Q. The authors themselves, however, interpret their own results by suggesting that the stacking interactions are reduced considerably. That is what they say, correct? A. If they interpret the CD and ORD specter that way, that's fine, but they're certainly not gone, 		
2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20 21 22	lights, left and right polarized. DNA duplex is chiral. Anything that relaxes that chirality at all leads to changes. So if you simply relax the duplex slightly, you get differences in the ORD and CD signals. People don't understand the origins of ORD and CD. It's the only way that we use these signals is by model systems. We say, okay, an alpha helix is like this, and a protein and beta sheet's like this. DNA duplex A form is like this; B form is like this. Little small changes happen all the time, and they are only understandable in the context of a model system. And so if there is no model system to show that, you can't say that it's denatured anything. Slight relaxations of the DNA is common, it doesn't in any way show that the hydrogen bonds are disrupted. It just shows that the duplex is slightly relaxed. Its chirality is not identical. There is nothing in that to me there is nothing that you read here that to me would suggest	2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20 21 22	 thing, and sodium is perfectly compatible. Palladium (II) is simply interacting with the nitrogens of the bases in the waters and the phosphates. There's nothing it's just in some respects it's there's no evidence here that palladium (II) is acting as anything other than a counterion in the same way that sodium, which is a cation, would be interacting. But there is nothing in the change in the CRD and the ORD that suggests to me that the DNA is denatured. In fact, in all cases, it still has a CD an an ORD signal, suggesting that it is still chiral, suggesting there is still duplex. Q. The authors themselves, however, interpret their own results by suggesting that the stacking interactions are reduced considerably. That is what they say, correct? A. If they interpret the CD and ORD specter that way, that's fine, but they're certainly not ablated because they're certainly not gone, because there is still ORD and CD signal there. 		
2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20 21 22 23	lights, left and right polarized. DNA duplex is chiral. Anything that relaxes that chirality at all leads to changes. So if you simply relax the duplex slightly, you get differences in the ORD and CD signals. People don't understand the origins of ORD and CD. It's the only way that we use these signals is by model systems. We say, okay, an alpha helix is like this, and a protein and beta sheet's like this. DNA duplex A form is like this; B form is like this. Little small changes happen all the time, and they are only understandable in the context of a model system. And so if there is no model system to show that, you can't say that it's denatured anything. Slight relaxations of the DNA is common, it doesn't in any way show that the hydrogen bonds are disrupted. It just shows that the duplex is slightly relaxed. Its chirality is not identical. There is nothing in that to me there is nothing that you read here that to me would suggest that it would no longer be able to be substrate for	2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20 21 22 23	 thing, and sodium is perfectly compatible. Palladium (II)is simply interacting with the nitrogens of the bases in the waters and the phosphates. There's nothing it's just in some respects it's there's no evidence here that palladium (II) is acting as anything other than a counterion in the same way that sodium, which is a cation, would be interacting. But there is nothing in the change in the CRD and the ORD that suggests to me that the DNA is denatured. In fact, in all cases, it still has a CD an an ORD signal, suggesting that it is still chiral, suggesting there is still duplex. Q. The authors themselves, however, interpret their own results by suggesting that the stacking interactions are reduced considerably. That is what they say, correct? A. If they interpret the CD and ORD specter that way, that's fine, but they're certainly not ablated because they're certainly not gone, because there is still ORD and CD signal there. Q. But they do interpret this data as 		
2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20 21 22	lights, left and right polarized. DNA duplex is chiral. Anything that relaxes that chirality at all leads to changes. 	yu Komesberg, Fil.D.		
1	Page 247 say, correct?	1	Page 248 MR. ZIMMERMAN: You said palladium not
2	A. I don't see that they relate that to	2	palladium II.
3	recognition by a polymerase in any manner.	3	MR. SCHWARTZ: Okay. I will correct it
4	Q. They are simply saying that the presence	4	by saying palladium II.
5	of palladium results in stacking interactions	5	THE WITNESS: That is what they say. And
6	reduced considerably they use the word	6	I think a POSA would have understood that those
7	"considerably" and that the Watson Crick	7	changes that number one, that there was no link
8	hydrogen bonded double helical system is disturbed	8	to any sequencing by synthesis to any polymerase
	where the regions of palladium binding are. That	9	recognition for that matter at all. And a POSA
	is what they say. That is what they teach, right?	10	certainly would have still understood that there
11	A. Could you, again, point me to exactly	11	was still a helical structure there.
12	where they say that?	12	So there still had to be pattern. So to
			•
13	Q. At the end of the paragraph: "These	13	whatever extent they're reduced considerably, they
14	results suggest that stacking interactions are	14	are not gone.
15	reduced considerably." Those are their words.	15	Q. But a POSA reading this would understand
16	"And the Watson and Crick hydrogen bonded double	16	that the authors interpret this data as showing
17	helical system has been disturbed, at least in the	17	that the palladium causes stacking interactions to
18	regions where binding of palladium takes place."	18	be reduced considerably?
19	That was the authors' interpretation of	19	MR. ZIMMERMAN: Objection. Asked and
20	their own data, correct?	20	answered.
21	MR. ZIMMERMAN: Objection.	21	THE WITNESS: Those are the words there.
22	Mischaracterizes the document. And you read it	22	BY MR. SCHWARTZ:
23	incorrectly.	23	Q. What you were talking about before when
24	MR. SCHWARTZ: Where did I read it	24	you gave your long explanation of the ORD and the
25	incorrectly?	25	CD, that was speculation on your part on whether or
	Page 249		Page 250

"Answer: Judging from the response of my reviews on grants that I submitted that it was not common, then the answer would be, no. People did not believe that you could." So the portions of your testimony that I

Page 251	rioya Komesberg, rin.b.			
MR. ZIMMERMAN: Objection. Incomplete.	1	Page 252 Q. Take your time.		
BY MR. SCHWARTZ:	2	A. Okay. Could you repeat the question?		
Q. I said the portions that I read were what	3	Q. Sure. So my question was you testified		
vou testified, correct?	4	that as of 2002 people did not believe that they		
A. Those are the words written, yes.	5	could modify or engineer polymerases to improve		
Q. And you testified that as of 2002, people	6	their ability to incorporate nucleotides with 3'-O		
did not believe that they could modify or engineer	7	protecting groups?		
		A. I think that's too general of a		
		statement. That is certainly not what I intended		
	-	to say in this declaration. What I intended to say		
· · · · · · · · ·		was that it would have been viewed by in		
		general, as being very difficult.		
		Q. But you didn't actually say that. You		
•		said that people would not believe that you could?		
		A. No, I did say that. If you read on, I		
		said people would not have considered that a likely		
		possibility. A handful of groups including		
		people were starting to make progress. In 2002,		
		people were starting to make progress. A handful		
-		of groups, including mine, sure. No one thought it		
		was easy. To this day it is not easy.		
		So I certainly meant that it was difficult		
-		and that people would have viewed it as difficult, n		
	-	doubt.		
	— ·	Q. And in 2000, it would have been even more		
	4	Page 254 "Answer: Yes.		
-		"Question: And in the discussions you've had with Dr. Tsien, have you ever discussed		
		modified nucleotides?		
	-	"Answer: Surprisingly, no."		
0,				
- · · · · · · · · · · · · · · · · · · ·	-	I'm not going to read the whole		
· · · ·		transcript into the record, but and of course		
		you can look at any part that you want. I'm going		
	-	to ask that you skip ahead to Page 46 and draw your		
	-	attention to Line 8. Starting at Line 8, the		
		transcript reads:		
		"Answer: And to tell you the truth, I		
people some people believed that you could,	13	never really knew that he did this work until I		
including my group. So I believed we could.	14	read this patent."		
But what I was trying to say then is that -	15	And the portions of the transcript I read		
a = a = b = b = a = b = b = b = b = b =	16			
and this certainly is still the case today, is that	16	is what you testified, correct?		
it's not easy.	17	A. That is what is written, yes.		
it's not easy. Q. I am going to ask you to turn back to	17 18	A. That is what is written, yes.Q. And the patent which you were referring		
it's not easy. Q. I am going to ask you to turn back to Exhibit 2080, which is your deposition transcript	17 18 19	 A. That is what is written, yes. Q. And the patent which you were referring to in your testimony is the Tsien patent 		
it's not easy. Q. I am going to ask you to turn back to Exhibit 2080, which is your deposition transcript in IPR2013-00128. Please turn to Page 45.	17 18 19 20	 A. That is what is written, yes. Q. And the patent which you were referring to in your testimony is the Tsien patent application, which is marked as Exhibit 1013,

	bolymerases to improve their ability to incorporate nucleotides with 3'-O protecting groups, correct? MR. ZIMMERMAN: Objection. Mischaracterizes. THE WITNESS: Could you repeat the question? BY MR. SCHWARTZ: Q. You testified that as of 2002 people did not believe that they could modify or engineer polymerases to improve their ability to incorporate nucleotides with 3'-O protecting groups? MR. ZIMMERMAN: Objection. Mischaracterizes. BY MR. SCHWARTZ: Q. That is what you testified, correct? A. I would like to read this. Q. Sure. A. One second please. Page 253 Difficult, correct? A. There are no significant differences between 2000 and 2002, in my opinion, in my recollection. I don't know of anything that would have changed my answer for 2000. Q. But again, in the testimony that we read, your response to the question at that deposition was, no, people did not believe that you could. A. No, I believe I tried to clarify that and explain that people would have thought it was very difficult. But there were groups working on it. So if there were groups working on it.	bolymerases to improve their ability to incorporate hucleotides with 3'-O protecting groups, correct?8MR. ZIMMERMAN: Objection.10Mischaracterizes.11THE WITNESS: Could you repeat the question?12Q. You testified that as of 2002 people did not believe that they could modify or engineer polymerases to improve their ability to incorporate nucleotides with 3'-O protecting groups?16polymerases to improve their ability to incorporate nucleotides with 3'-O protecting groups?18MR. ZIMMERMAN: Objection.19Mischaracterizes.20BY MR. SCHWARTZ:21Q. That is what you testified, correct?22A. I would like to read this.23Q. Sure.24A. One second please.25Difficult, correct?1A. There are no significant differences oetween 2000 and 2002, in my opinion, in my eccollection. I don't know of anything that would have changed my answer for 2000.5Q. But again, in the testimony that we read, your response to the question at that deposition was, no, people did not believe that you could.8A. No, I believe I tried to clarify that and explain that people would have thought it was very difficult. But there were groups working on it. So if there were groups working on it,12		

	yd Romesberg, Ph.D.		University in the City of New York
1	Page 255 right?	1	Page 256 A. No.
2	A. No. I've been doing work on modified	2	Q. And you testified in 2014 in the
3	nucleotides since 19 the end of 1998, so	3	transcript that we just looked at that you never
4	Q. About 20 years?	4	even knew that Tsien did any work on modified
5	A. About 20 years.	5	nucleotides until you became involved as an expert
6	Q. And you've published many research papers	6	for Illumina in the 2013 time frame, correct?
7	on modified nucleotides during that time, right?	7	A. I guess I'm not positive I said that. I
8	A. I have published a number of papers on	8	certainly was unaware that he had worked on the
9	that topic, yes.	9	sequencing aspect of modified nucleotides. I mean,
10	Q. Did you ever cite to Tsien's patent	10	he did lots of work on RNA and DNA, and there were,
11	application in any of your papers?	11	for example, linkers in that. And I would have to
12	A. No.	12	rethink that carefully as to I've never cited
13	Q. Do you recall ever citing to Tsien's	13	it, but I am sort of peripherally aware that he did
14	patent application in any of your review articles?	14	that work, but I believe what would be a factual
15	A. No.	15	statement and I would have to read this to make
16	Q. Do you ever recall citing to Tsien's	16	sure that this is what I said, but the content of
17	patent application in any of your grant	17	the patent that is under discussion, I was unaware
18	applications?	18	that he had been interested in that.
19	A. No, I did not.	19	MR. SCHWARTZ: I'm just looking at the
20	Q. Do you ever recall citing to Tsien's	20	record.
21	patent application in any presentations that you've	21	THE WITNESS: While you do that, could I
22	made?	22	request a bathroom break?
23	A. No.	23	MR. SCHWARTZ: Sure.
24	Q. I'm talking about scientific	24	THE VIDEOGRAPHER: We're off the record
25	presentations.	25	at 9:46 a.m.
	Page 257		Page 258
1	(Recess taken.)	1	O-modified nucleotides.
2	THE VIDEOGRAPHER: We are on the record	2	Q. So a person of ordinary skill who is
3	at 9:49 a.m.	3	developing nucleotides for use in SBS in the 2000
4	BY MR. SCHWARTZ:	4	time frame, it's fair to say that they would give
5	Q. I asked you this yesterday,	5	more weight to Metzker's paper that does provide
6	Dr. Romesberg, and I think you agree that Tsien	6	data than Tsien's prophetic application that is
7	doesn't provide any data showing that any 3' block	-	data than Tsien's prophetic application that is
8	doesn't provide any data showing that any 5 block	7	completely devoid of data, correct?
1	nucleotide works for DNA sequencing, correct?	I _	
9		7	completely devoid of data, correct?
9 10	nucleotide works for DNA sequencing, correct? MR. ZIMMERMAN: Objection. Asked and answered by your own admission.	7 8	completely devoid of data, correct? A. On certain issues that data certainly is important. And I think that there are people would have weighted that data differently and
9	nucleotide works for DNA sequencing, correct? MR. ZIMMERMAN: Objection. Asked and answered by your own admission. THE WITNESS: Yes. I believe we had that	7 8 9 10 11	completely devoid of data, correct? A. On certain issues that data certainly is important. And I think that there are people would have weighted that data differently and certainly more impactfully. They would have
9 10 11 12	nucleotide works for DNA sequencing, correct? MR. ZIMMERMAN: Objection. Asked and answered by your own admission. THE WITNESS: Yes. I believe we had that discussion. And I believe I agreed with that.	7 8 9 10 11 12	completely devoid of data, correct? A. On certain issues that data certainly is important. And I think that there are people would have weighted that data differently and certainly more impactfully. They would have seeing is believing.
9 10 11 12 13	nucleotide works for DNA sequencing, correct? MR. ZIMMERMAN: Objection. Asked and answered by your own admission. THE WITNESS: Yes. I believe we had that discussion. And I believe I agreed with that. BY MR. SCHWARTZ:	7 8 9 10 11 12 13	completely devoid of data, correct? A. On certain issues that data certainly is important. And I think that there are people would have weighted that data differently and certainly more impactfully. They would have seeing is believing. So I just don't want to say in any way that
9 10 11 12 13 14	nucleotide works for DNA sequencing, correct? MR. ZIMMERMAN: Objection. Asked and answered by your own admission. THE WITNESS: Yes. I believe we had that discussion. And I believe I agreed with that. BY MR. SCHWARTZ: Q. And Tsien's application is entirely	7 8 9 10 11 12 13 14	completely devoid of data, correct? A. On certain issues that data certainly is important. And I think that there are people would have weighted that data differently and certainly more impactfully. They would have seeing is believing. So I just don't want to say in any way that they would have then dismissed a good idea, whether
9 10 11 12 13 14 15	nucleotide works for DNA sequencing, correct? MR. ZIMMERMAN: Objection. Asked and answered by your own admission. THE WITNESS: Yes. I believe we had that discussion. And I believe I agreed with that. BY MR. SCHWARTZ: Q. And Tsien's application is entirely prophetic, right?	7 8 9 10 11 12 13 14 15	completely devoid of data, correct? A. On certain issues that data certainly is important. And I think that there are people would have weighted that data differently and certainly more impactfully. They would have seeing is believing. So I just don't want to say in any way that they would have then dismissed a good idea, whether you viewed Tsien's idea as good or not.
9 10 11 12 13 14 15 16	 nucleotide works for DNA sequencing, correct? MR. ZIMMERMAN: Objection. Asked and answered by your own admission. THE WITNESS: Yes. I believe we had that discussion. And I believe I agreed with that. BY MR. SCHWARTZ: Q. And Tsien's application is entirely prophetic, right? A. On this subject, yes. I'd have to go 	7 8 9 10 11 12 13 14 15 16	 completely devoid of data, correct? A. On certain issues that data certainly is important. And I think that there are people would have weighted that data differently and certainly more impactfully. They would have seeing is believing. So I just don't want to say in any way that they would have then dismissed a good idea, whether you viewed Tsien's idea as good or not. The downside of data is that it is a
9 10 11 12 13 14 15 16 17	 nucleotide works for DNA sequencing, correct? MR. ZIMMERMAN: Objection. Asked and answered by your own admission. THE WITNESS: Yes. I believe we had that discussion. And I believe I agreed with that. BY MR. SCHWARTZ: Q. And Tsien's application is entirely prophetic, right? A. On this subject, yes. I'd have to go back and I did not have that in mind as I read 	7 8 9 10 11 12 13 14 15 16 17	completely devoid of data, correct? A. On certain issues that data certainly is important. And I think that there are people would have weighted that data differently and certainly more impactfully. They would have seeing is believing. So I just don't want to say in any way that they would have then dismissed a good idea, whether you viewed Tsien's idea as good or not. The downside of data is that it is a specific question, and you can only get answers to
9 10 11 12 13 14 15 16 17 18	 nucleotide works for DNA sequencing, correct? MR. ZIMMERMAN: Objection. Asked and answered by your own admission. THE WITNESS: Yes. I believe we had that discussion. And I believe I agreed with that. BY MR. SCHWARTZ: Q. And Tsien's application is entirely prophetic, right? A. On this subject, yes. I'd have to go back and I did not have that in mind as I read it, so it is possible that there were spots that 	7 8 9 10 11 12 13 14 15 16 17 18	completely devoid of data, correct? A. On certain issues that data certainly is important. And I think that there are people would have weighted that data differently and certainly more impactfully. They would have seeing is believing. So I just don't want to say in any way that they would have then dismissed a good idea, whether you viewed Tsien's idea as good or not. The downside of data is that it is a specific question, and you can only get answers to specific questions.
9 10 11 12 13 14 15 16 17 18 19	 nucleotide works for DNA sequencing, correct? MR. ZIMMERMAN: Objection. Asked and answered by your own admission. THE WITNESS: Yes. I believe we had that discussion. And I believe I agreed with that. BY MR. SCHWARTZ: Q. And Tsien's application is entirely prophetic, right? A. On this subject, yes. I'd have to go back and I did not have that in mind as I read it, so it is possible that there were spots that had data. I did look at the patent in regards to 	7 8 9 10 11 12 13 14 15 16 17 18 19	 completely devoid of data, correct? A. On certain issues that data certainly is important. And I think that there are people would have weighted that data differently and certainly more impactfully. They would have seeing is believing. So I just don't want to say in any way that they would have then dismissed a good idea, whether you viewed Tsien's idea as good or not. The downside of data is that it is a specific question, and you can only get answers to specific questions. So it is difficult to interpret data that i
9 10 11 12 13 14 15 16 17 18 19 20	 nucleotide works for DNA sequencing, correct? MR. ZIMMERMAN: Objection. Asked and answered by your own admission. THE WITNESS: Yes. I believe we had that discussion. And I believe I agreed with that. BY MR. SCHWARTZ: Q. And Tsien's application is entirely prophetic, right? A. On this subject, yes. I'd have to go back and I did not have that in mind as I read it, so it is possible that there were spots that had data. I did look at the patent in regards to this particular issue, and there is no data. 	7 8 9 10 11 12 13 14 15 16 17 18 19 20	completely devoid of data, correct? A. On certain issues that data certainly is important. And I think that there are people would have weighted that data differently and certainly more impactfully. They would have seeing is believing. So I just don't want to say in any way that they would have then dismissed a good idea, whether you viewed Tsien's idea as good or not. The downside of data is that it is a specific question, and you can only get answers to specific questions. So it is difficult to interpret data that i negative as being it is difficult to know how
9 10 11 12 13 14 15 16 17 18 19 20 21	 nucleotide works for DNA sequencing, correct? MR. ZIMMERMAN: Objection. Asked and answered by your own admission. THE WITNESS: Yes. I believe we had that discussion. And I believe I agreed with that. BY MR. SCHWARTZ: Q. And Tsien's application is entirely prophetic, right? A. On this subject, yes. I'd have to go back and I did not have that in mind as I read it, so it is possible that there were spots that had data. I did look at the patent in regards to this particular issue, and there is no data. Q. And in contrast to Tsien's prophetic 	 7 8 9 10 11 12 13 14 15 16 17 18 19 20 21 	 completely devoid of data, correct? A. On certain issues that data certainly is important. And I think that there are people would have weighted that data differently and certainly more impactfully. They would have seeing is believing. So I just don't want to say in any way that they would have then dismissed a good idea, whether you viewed Tsien's idea as good or not. The downside of data is that it is a specific question, and you can only get answers to specific questions. So it is difficult to interpret data that i negative as being it is difficult to know how general a negative result is.
9 10 11 12 13 14 15 16 17 18 19 20 21 22	 nucleotide works for DNA sequencing, correct? MR. ZIMMERMAN: Objection. Asked and answered by your own admission. THE WITNESS: Yes. I believe we had that discussion. And I believe I agreed with that. BY MR. SCHWARTZ: Q. And Tsien's application is entirely prophetic, right? A. On this subject, yes. I'd have to go back and I did not have that in mind as I read it, so it is possible that there were spots that had data. I did look at the patent in regards to this particular issue, and there is no data. Q. And in contrast to Tsien's prophetic patent application, Metzker 1994 does provide data 	7 8 9 10 11 12 13 14 15 16 17 18 19 20 21 22	 completely devoid of data, correct? A. On certain issues that data certainly is important. And I think that there are people would have weighted that data differently and certainly more impactfully. They would have seeing is believing. So I just don't want to say in any way that they would have then dismissed a good idea, whether you viewed Tsien's idea as good or not. The downside of data is that it is a specific question, and you can only get answers to specific questions. So it is difficult to interpret data that i negative as being it is difficult to know how general a negative result is. Q. I think my question may have been a
9 10 11 12 13 14 15 16 17 18 19 20 21 22 23	 nucleotide works for DNA sequencing, correct? MR. ZIMMERMAN: Objection. Asked and answered by your own admission. THE WITNESS: Yes. I believe we had that discussion. And I believe I agreed with that. BY MR. SCHWARTZ: Q. And Tsien's application is entirely prophetic, right? A. On this subject, yes. I'd have to go back and I did not have that in mind as I read it, so it is possible that there were spots that had data. I did look at the patent in regards to this particular issue, and there is no data. Q. And in contrast to Tsien's prophetic patent application, Metzker 1994 does provide data for a number of 3' block nucleotides for use in DNA 	 7 8 9 10 11 12 13 14 15 16 17 18 19 20 21 22 23 	 completely devoid of data, correct? A. On certain issues that data certainly is important. And I think that there are people would have weighted that data differently and certainly more impactfully. They would have seeing is believing. So I just don't want to say in any way that they would have then dismissed a good idea, whether you viewed Tsien's idea as good or not. The downside of data is that it is a specific question, and you can only get answers to specific questions. So it is difficult to interpret data that i negative as being it is difficult to know how general a negative result is. Q. I think my question may have been a little bit different, which is, given that Metzker
9 10 11 12 13 14 15 16 17 18 19 20 21 22	 nucleotide works for DNA sequencing, correct? MR. ZIMMERMAN: Objection. Asked and answered by your own admission. THE WITNESS: Yes. I believe we had that discussion. And I believe I agreed with that. BY MR. SCHWARTZ: Q. And Tsien's application is entirely prophetic, right? A. On this subject, yes. I'd have to go back and I did not have that in mind as I read it, so it is possible that there were spots that had data. I did look at the patent in regards to this particular issue, and there is no data. Q. And in contrast to Tsien's prophetic patent application, Metzker 1994 does provide data 	7 8 9 10 11 12 13 14 15 16 17 18 19 20 21 22	 completely devoid of data, correct? A. On certain issues that data certainly is important. And I think that there are people would have weighted that data differently and certainly more impactfully. They would have seeing is believing. So I just don't want to say in any way that they would have then dismissed a good idea, whether you viewed Tsien's idea as good or not. The downside of data is that it is a specific question, and you can only get answers to specific questions. So it is difficult to interpret data that i negative as being it is difficult to know how general a negative result is. Q. I think my question may have been a

Flo	yd Romesberg, Ph.D.	University in the City of New York		
4	Page 259	4	Page 260	
1	skilled artisan would give more weight to a paper	1	if you have a situation where you have a paper and	
2	with data in terms of understanding how those 3'-O protecting groups would work for DNA sequencing	2	suppose that you are interested in developing 3'-O	
3		3	protecting groups for DNA sequencing, you have a	
4	than another application that is entirely	4	paper that actually tests 3'-O protecting groups?	
5	prophetic?	5	A. See, that is the problem. So you can	
6	A. I mean, I understand what you are saying,	6	make the suggestion that you could use 3'-O	
7	and in one perspective I agree with that because,	7	protecting groups, and you cannot address that	
8	like I said, data speaks louder than suggestions.	8	question in a single paper. You cannot fully	
9	Seeing is believing. But at the same time, there	9	address that question.	
10	is always the caveat because, as I said,	10	,	
11	experimental data always is a specific experiment.	11	one paper and you can look at the specific	
12	It answers a specific question.	12		
13	And you may look at that and say, well, tha	13		
14	is not the question exactly I wanted, or I think tha	14		
15	I could optimize this. There are a variety of	15		
16	responses.	16	,	
17	In general, certainly seeing is	17	· · · ·	
18	believing, and you want to see data. That is	18	3 1 1	
19	always good.	19	optimize the experiment or that it could be run	
20	So, yeah, what you're saying is certainly	20	differently or in the case that we are talking about	
21	sort of true, but at the same time, a good idea is a	21	you could use different polymerases or whatever, but	
22	good idea. And sometimes people want to pursue it	22	my point is that on any experimental result where	
23	more than someone else might.	23	there is a result, you would believe that data more	
24	Q. I think again, I'm not sure that you	24	,	
25	are responding directly to my question, which is,	25	But to the extent that data answers	
	Page 261		Page 262	
1	specific questions and only those specific	1	Q. The IPR2013-00517. It is Exhibit 2007.	
2	questions, then you might not want to dismiss an	2	A. Yes.	
3	entire idea based on one particular set of data.	3	Q. Please turn to Page 23. Please look at	
4	Q. Please go back to Exhibit 2035, your	4	the first full sentence. And the sentence reads	
5	deposition transcript in IPR2013-00517.	5	"This reaction was performed in methanol, which was	
6	A. I'm there.	6	known to denature DNA. See infer at paragraph 55.	
7	Q. And please turn to Page 99, and starting	7	Required two hours and resulted in only 75 to	
8	with the first full sentence, halfway through it	8	91 percent yield." And you cite to the Loubinoux	
9	states the transcript reads I'm sorry, the	9	paper. "Further, stannous chloride, SnCl2, was	
10	transcript reads "There are lots of read lengths	10	known to damage DNA by causing nicks in DNA	
11	that would simply never be useful for sequencing by	11	strands." And you cite to a Dontis 1999 paper.	
12	synthesis. A read length of one is just an	12		
13	example. You would never be able to do anything	13	considerations would have led one of ordinary skill	
14		14	to have expected stannous chloride to be	
15	That is what you said, right?	15	incompatible with Tsien's and Ju's requirements for	
16	A. That is what is written.	16	sequencing by synthesis."	
17	Q. So your testimony is there are lots of	17	That is what you wrote, correct?	
18	read lengths that would simply never be useful for	18	A. That is correct. That is what is	
19	sequencing by synthesis, and a read length of one	19	written.	
20	is an example.	20	Q. And it is your opinion that a	
21	A. For sequencing by synthesis, I believe	21	deprotection reaction that requires two hours is	
22	that is what I was saying, yes.	22	incompatible with Tsien's SBS methods, correct?	
23	Q. Please go back to Exhibit 2007. That is	23	A. That is not exactly correct, no.	
24	-	24	-	
105	A. I'm sorry, what declaration?	25	MR. ZIMMERMAN: Objection.	
25	A. Thi sony, what decidration:		,	

FIO	/d Romesberg, Ph.D.		University in the City of New York
1	Page 263 Mischaracterizes.	1	Page 264 Q. And so you wrote it?
2	THE WITNESS: That is not what I intended	2	A. It's written. Two hours with 80 percent
	to write.	3	yield is very different than two hours
-	BY MR. SCHWARTZ:	4	quantitative.
5	Q. Did you write it?	5	So the time is inseparable from the yield.
6	MR. ZIMMERMAN: Objection.	6	Those are related things. So because I know wher
-	Mischaracterizes.	7	you are going with this, just be clear that my
8	THE WITNESS: I wrote the words that are	8	criteria for two hours, that is influenced by the
-	there. You are interpreting it differently than I	9	fact that it is 90 percent yield. So just to be
10	intended.	10	clear.
11	BY MR. SCHWARTZ:	11	Q. So if the yield is not satisfactory, two
12	Q. Do you not say that any one of these	12	hours is certainly not satisfactory with that
13	considerations would have led one of ordinary skill	13	yield. Is that what you are saying?
14	to have expected stannous chloride to be	14	A. I'm sorry. Could you repeat that?
15	incompatible with Tsien's and Ju's requirements for	15	Q. If the deprotection yield is not
16	sequencing by synthesis?	16	satisfactory, then certainly two hours with that
17	A. That is what I wrote. And that is what I	17	deprotection yield is not satisfactory?
18	meant.	18	A. Certainly.
19	Q. And any one of those requirements	19	Q. And that would not be compatible with
20	included the two hours?	20	Tsien's method?
21	A. Can I explain it?	21	A. For any efficiency component of that. As
22	Q. Did you write that?	22	we talked about yesterday, you can still do
23	A. I would like to explain it.	23	sequencing by synthesis, just not in any sort of
24	Q. Can you answer my question first?	24	efficient way that I believe Tsien required.
25	A. You can read it. That is correct.	24 25	Q. And that's true for SBS methods in
20		23	W . And that 3 true for 505 methods in
1	Page 265 general. It's not just for Tsien, correct?	1	Page 266 Q. And because of the natural dAPT
2	A. For anything to be efficient, if you have	2	contaminant you would end up with read through; is
	a deprotection time that's part of the procedure	3	that correct?
	then, yes, that would add time and make it	4	A. It would prevent termination.
	effectively unrealistic to perform.	5	Q. And that would result in read through?
6	Q. I am going to ask you to go back to the	6	A. It would prevent termination. So I think
7	Metzker paper. The Metzker 1994 paper, I should	7	we're using I think we're saying the same thing.
8	say. It is Exhibit 1016.	8	Q. So please turn to Page 4263, right
9	A. I have it.	9	column, second full paragraph. Halfway through
10	Q. And please go back to Table 2 on	10	that paragraph Metzker says in Figure 3B do you
11	Page 4263. Yesterday we discussed how Table 2	11	see that?
12	reports termination asterisk for the 3'-O-allyl	12	A. I do.
13	dAPT with the Vent polymerase.	13	Q. Metzker writes in Figure 3B "The O-allyl
14	Do you remember that?	14	template gel also shows the incorporation of 3'-O
15	A. I remember the discussion.	15	methyl dAPT, compound one, by AMV RT.
16	Q. And the asterisk indicates that there was	16	In addition to termination, some read
17	incomplete termination, correct?	17	through was also observed due to the presence of
18	A. That is what is written.	18	contaminating dATP."
19	Q. And if I understand your position from	19	That is what Metzker writes, correct?
20	yesterday, the incomplete termination is the result	20	A. That is what is written.
21	of the natural dAPT contaminate being incorporated,	21	Q. So the read through reported for the 3'-O
22	which allows synthesis to continue.	22	methyl dATP for AMV indicates that there was
23	Is that your position?	23	incomplete termination, correct?
24	A. I think that would have been the likely	24	A. The read through indicates there was
25	suspicion of a POSA.	25	incomplete termination. I think those are the same
1			•

Floyd Romesberg, Ph.D. University in the City of New York				
Page 267	Page 268			
1 thing.	1 that you still have I believe what termination			
2 Q. And so let's look at Table 2 and focus on	2 means here is that you produced a banding pattern			
3 the 3'-O methyl dAPT with the AMV reverse	3 the same as the dideoxy.			
4 transcript, please.	4 Now, if there was a little bit of read			
5 Do you see that?	5 through but effectively you produced exactly that			
6 A. Yes.	6 same banding pattern, I believe that Metzker would			
7 Q. And Metzker reports that there was	7 have called that complete termination. And that's			
8 complete termination, correct?	8 simply because the contaminating 1 percent dAPT just			
9 A. That is correct.	9 didn't effectively prevent all those bands from bein			
10 Q. And Metzker reports that there was	10 formed due to termination.			
11 complete termination even though there was read	11 And I assume that's because the 3'-O methyl			
12 through, correct?	12 is very competitive with the dAPT. And the 3' allyl			
13 A. Some read through he reports.	13 would have been less competitive with the dAPT.			
14 Q. So the presence of read through caused by	14 So I think that's consistent with the			
15 the natural dAPT contaminant did not lead Metzker	15 O-methyl being more competitive.			
16 to report incomplete termination for the 3'-O	16 MR. SCHWARTZ: I would like to take a			
17 methyl dAPT with that polymerase, correct?	17 break now and discuss whether I have any further			
18 A. That is what is written. And what that	18 questions.			
19 would mean is that the O-methyl is even better	19 THE VIDEOGRAPHER: We are off the record			
20 incorporated.	20 at 10:04 a.m.			
21 Q. But despite the presence of the read	21 (Recess taken.)			
22 through, Metzker reports that as complete	22 THE VIDEOGRAPHER: We are on the record			
23 termination?	23 at 10:25 a.m.			
A. I don't know how much read through was	24 MR. SCHWARTZ: Thank you, Dr. Romesberg.			
25 there, but it might have been such a small amount	25 I have no further questions on this

FIO	ya Romesberg, Ph.D.		University in the City of New York
1	Page 271 A. Yes.	1	Page 272 Q. And how many carbons does MOM have?
2	Q. If you look at Column 8 of Ju at Line 26.	2	A. It has two carbons.
3	A. Yes.	3	Q. Leaving aside hydrogen, how many atoms
4	Q. Do you see there is preference to, quote,	4	does MOM have?
5	"A small chemical moiety such as."	5	A. Three.
6	A. I'm sorry. Where are you?	6	Q. And leaving aside hydrogen, how many
7	Q. Line 25.	7	atoms does allyl have?
8	A. Yes.	8	A. Three.
9	Q. Column 8. You will see it reads "A small		
10	chemical moiety such as CH2OCH3 or CH2CH-double	9	Q. If we could turn to the Tsien patent, which is Exhibit 1013.
11	bond-CH2?	10 11	
12	A. Yes.		A. Yes.
13		12	Q. Do you have that in front of you?A. Yes.
14	Q. What is the second compound there?A. That is the allyl.	13 14	
	-		Q. Do you recall there was some discussion
15	Q. And what is the first compound?A. That is the MOM.	15	during your examination of Example 2?
		16	A. Could you direct me to that?
17	Q. And does that show MOM as having three	17	Q. Yes. It is on Page 36 and spans over to
18		18	Page 37.
19	A. Did I say three carbons? I apologize. I	19	A. Yes, I do.
20	meant three atoms.	20	Q. And there was some discussion, if you
21	Q. So let me ask you the question again. Do	21	will recall, about the concentrations in that
22	MOM and allyl both have three carbons?	22	example, correct?
23	A. No, I'm sorry.	23	A. Yes. On Page 35, Example 2?
24 25	Q. How many carbons does allyl have?	24	Q. Yes.
25	A. Allyl has three carbons.	25	A. Yes, I think I remember.
1	Page 273 Q. And then there was comparisons of those	1	Page 274 Do you recall a number of discussions
2	concentrations to other references?	2	during your examination about a POSA?
3	MR. SCHWARTZ: I just want to make an	3	A. Yes, I do.
4	objection. I don't believe that there was any	4	Q. And you were asked to assume that a POSA
5	testimony about Example 2.	5	was a person in October of 2000?
6	MR. ZIMMERMAN: Okay.	6	A. That is correct.
7	BY MR. ZIMMERMAN:	7	Q. Is it safe to say that a person of
8		8	ordinary skill in the art, if we assume October of
-	Q. I may have misspoken. If you will turn	-	-
9	to Page 38. A. Yes. Correct.	9	2000, wouldn't have had knowledge of articles that
10		10 11	were published after that? A. That is correct.
11	Q. Do you see Example 4?	12	
12 13	 A. Yes. Q. Do you recall some discussion about the 	12	Q. Can we agree that the Metzker 2011
	-	-	article, Exhibit 2025, was published after October 2000?
14 15	concentrations in Example 4? A. Yes.	14 15	A. Yes.
1 5	Q. Was that the only example of Tsien that	15 16	A. res. Q. And can we agree that the Metzker 2007
	· ·		article, Exhibit 1017, was published after
17	you were pointed to with respect to concentrations	17 18	October 2000?
18	during your examination?	-	
19	A. I believe it was.	19	A. Yes.
20	Q. Does Tsien have other examples?	20	Q. And the new one that was marked today, Exhibit 1089, by Hamod, which was published in
21	A. Yes. He has six examples, I believe.	21	Exhibit 1089, by Hamed, which was published in
22	Q. And does Tsien in its teaching have any	22	2001, can we agree that was after October 2000?
23	requirements with respect to concentrations?	23	A. Yes.
24	A. No.	24	Q. So would a person of ordinary skill in
25	Q. You can put that aside.	25	the art as you've defined them have access to those
L			

	d Romesberg, Ph.D.			
	Page 275		Page 276	
1	articles?	1	compound or multiple compounds?	
2	A. No.	2	A. That should be a single compound as he	
3	Q. I would like you to look at the Metzker	3	has shown it here. He shows the structure of that	
4	'94 article, which is Exhibit 1016.	4	compound in Figure 2.	
5	Do you have that?	5	Q. And is that a substituted allyl?	
6	A. I do.	6	A. No, that is just the canonical allyl	
7	Q. So between the publication of this paper	7		
			group.	
8	and October of 2000, did Dr. Metzker publish any	8	Q. Are there any other 3'-O allyls in the	
9	retraction or correction of this paper, to your	9	Metzker '94 paper?	
10	knowledge?	10	A. No, there's not.	
11	A. Not to my knowledge.	11	Q. Does he describe a genus of 3'-O allyls?	
12	Q. And are you aware of any publication by	12	A. No, he does not.	
13	Metzker or anyone in his group or anyone who	13	Q. Does he describe a substituted	
14	reviewed this, that indicated the data in this	14	3'-O allyl?	
15	publication was incorrect between '94 and	15	A. Not to my knowledge, no.	
16	October 2000?	16	Q. So the only 3'-O allyl in Metzker,	
17	A. No, I do not believe there were any such	17	Table 2, is the one there?	
18	publications.	18	A. Yes, that is correct.	
19	Q. Now, if you look at Table 2 on Page 4263.	19	MR. ZIMMERMAN: I have no further	
20	A. Yes, I'm there.	20	questions at this time.	
21	Q. Entry No. 3.	21	MR. SCHWARTZ: We can go off the record	
22	A. Yes.	22	and take a break.	
23	Q. 3'-O-allyl modified dATP?	23	THE VIDEOGRAPHER: Going off the record	
24	A. That is correct.	24	at 10:35 a.m.	
25	Q. Can you tell me if that is a single	25	(Recess taken.)
