Thanks for visiting the NLB website.

We've created this site to tell you more about water jetting, and how we can help you use it to remove product build-up or prepare surfaces more productively. At high-pressure (2,000 to 20,000 psi or 140 to 1,400 bar) or ultra-high pressure (up to 40,000 psi or 2,800 bar), water jetting is the the most powerful, versatile method you can choose. And it exposes your personnel -- and the environment -- to nothing but water.

At NLB Corp., we've been helping contractors and industrial companies solve their toughest product removal and surface prep problems for nearly 30 years, with rugged pumps, hundreds of accessories, and unsurpassed customer support.

If you're looking for examples of water jetting at work, or NLB product information, you'll find it on our website.

If you'd like to request further information -- or tell us what you think - you can do so electronically.
