

DECLARATION OF PAMELA STANSBURY

I, Pamela Stansbury, being of full age and duly sworn, deposes and says as follows:

1. I am an employee of the Cornell University Library, and specifically the Original Cataloging Unit, located at Cornell University, Ithaca, New York 14853. I am familiar with the policies and procedures of the Library as they relate to the receipt, cataloging, and tracking of books and I have personal knowledge of the facts set forth below. I am familiar with these procedures because I have been employed by the Library since 1982, where I began in Technical Services as a Serials Assistant, then a copy cataloger in the Cataloging Unit in 1984. I have held my current position as Administrative Supervisor in the Original Cataloging Unit since the mid-1990s.
2. The Cornell Library holds an original copy of *Three-dimensional machine vision / edited by Takeo Kanade. Kluwer Academic Publishers, 1987* – specifically when this was first made publicly available by the Cornell Library. As best I can determine from my review of the Library's records and my knowledge of the Library's standard procedures, *Three-dimensional machine vision* was cataloged and publicly available at the Engineering Library, in its public stacks, shelved by its Library of Congress classification system number no later than November 11, 1987.
3. My opinion that *Three-dimensional machine vision* was cataloged and publicly available at the Cornell University Library no later than November 11, 1987 is based on the date stamp inside the volume, and my knowledge of the Library's standard procedures relevant to date stamping, cataloging, and shelving items. I have not seen any indication *Three-dimensional machine vision* would have been an exception to the Library's standard practice. The Library maintains a searchable and publicly accessible catalog of its publications. Therefore, as of November 11, 1987 for *Three-dimensional machine vision*, any member of the public could have located this item by searching our catalog by subject matter, author, or title.

I declare under penalty of perjury that all statements made herein of my own knowledge are true and that all statements made on information and belief are believed to be true; and further that these statements were made with the knowledge that willful false statements and the like so made are punishable by fine or imprisonment, or both, under Section 1001 of Title 18 of the United States Code..

Preface

Takeo Kanade, Editor

PART I: 3-D SENSING

**A Three-Dimensional
Light**

J. L. Mundy and

3-D Vision Systems
Steven K. Case, Editor

Robot Vision by
Martin D. Altschuler and
Jerome T. Dijak, Editors

**A Noncontact Optical
Surface Shape**
Takeo Kanade and

PART II: 3-D FEATURE EXTRACTION

Toward a Surface Representation
Jean Ponce and

**3-D Object Representation
Intrinsic Surface**
B. C. Vemuri, Editor

**Use of Vertex-Finding
Analysis**
Kokichi Sugihara

PART III: 3-D RECONSTRUCTION

**The Representation of
Shapes from Range Data**
O. D. Faugeras, Editor

providing sensory data for guiding robotic manipulators. The quest for a complete 3-D scene analysis system will become much more active both because of improving technological support in sensory transduction apparatus and computational resources, and because the potential applications of such a system are so diverse.
