R-421A is the Easy R22 Replacement

Choice R-421A is the only two-component blend commercially available for R-22 retrofits, which appeals to customers with concerns about refrigerants that contain hydrocarbons such as Butane, Isobutane, and Isopentane. We believe that these properties of Choice R-421A make it an especially good candidate for residential A/C R-22 retrofits, where the simplicity of the retrofit process and the performance are paramount.

R-421A Applications

R-421A is formulated to work in a variety of applications, including air conditioning split systems, heat pumps, supermarket pak systems, dairy chillers, reach-in storage, bakery applications, refrigerated transport, self-contained display cabinets, and walk-in coolers.

- R-22 Replacement Refrigerant
- The only two-component refrigerant blend
- Non-Ozone Depleting
- Requires no oil change
- Compatible with MO, AB & POE lubricants
- No hydrocarbons
- Performance comparable to R22
- Non-flammable, rated A1 by ASHRAE
- Used in a wide variety of applications
