## AFFIDAVIT OF DUNCAN HALL

1. I am a Records Request Processor at the Internet Archive, located in San Francisco, California. I make this declaration of my own personal knowledge.
2. The Internet Archive is a website that provides access to a digital library of Internet sites and other cultural artifacts in digital form. Like a paper library, we provide free access to researchers, historians, scholars, and the general public. The Internet Archive has partnered with and receives support from various institutions, including the Library of Congress.
3. The Internet Archive has created a service known as the Wayback Machine. The Wayback Machine makes it possible to browse more than 450 billion pages stored in the Internet Archive's web archive. Visitors to the Wayback Machine can search archives by URL (i.e., a website address). If archived records for a URL are available, the visitor will be presented with a display of available dates. The visitor may select one of those dates, and begin browsing an archived version of the Web. Links on archived files in the Wayback Machine point to other archived files (whether HTML pages or other file types), if any are found for the URL indicated by a given link. For instance, the Wayback Machine is designed such that when a visitor clicks on a hyperlink on an archived page that points to another URL, the visitor will be served the archived file found for the hyperlink's URL with the closest available date to the initial file containing the hyperlink.
4. The archived data made viewable and browseable by the Wayback Machine is obtained by use of web archiving software that automatically stores copies of files available via the Internet, each file preserved as it existed at a particular point in time.
5. The Internet Archive assigns a URL on its site to the archived files in the format `http://web.archive.org/web/[Year in yyyy][Month in mm][Day in dd][Time code in hh:mm:ss]/[Archived URL]` aka an "extended URL". Thus, the extended URL `http://web.archive.org/web/19970126045828/http://www.archive.org/` would be the URL for the record of the Internet Archive home page HTML file (`http://www.archive.org/`) archived on January 26, 1997 at 4:58 a.m. and 28 seconds (1997/01/26 at 04:58:28). The date indicated by an extended URL applies to a preserved instance of a file for a given URL, but not necessarily to any other files linked therein. Thus, in the case of a page constituted by a primary HTML file and other separate files (e.g., files with images, audio, multimedia, design elements, or other embedded content) linked within that primary HTML file, the primary HTML file and the other files will each have their own respective extended URLs and may not have been archived on the same dates.
6. Attached hereto as Exhibit A are true and accurate copies of screenshots of the Internet Archive's records of the archived files for the URLs and the dates specified in the attached coversheet of each printout.

7. I declare under penalty of perjury that the foregoing is true and correct.

## BROADBAND COAXIAL CABLE

### Packaging Options

#### Perfect Cube™ 1000 & Perfect Cube™ 500

The Perfect Cube™ line of packaging offers the convenience of a reel design with the benefits of box packaging. Installers can easily pull cable from the box without the cable kinking and the outer box has a recyclable, protective coating that resists moisture damage. Banding around the box increases durability and improves handling and the reinforced handles reduce tear-out.

#### 500' Reel Options

Perfect Flex™ is available in two 500 ft. reel options that can be used as standalone packaging or in one of the reusable caddy options. The 500ft plastic reel can be used in the Perfect Tote™ bag and the cardboard reel can be used in the Perfect Cube™ 500 Eco.

#### Perfect Tote™ 500

The soft bag design of the Perfect Tote 500 Eco offers a convenient shoulder strap, tool & connector pouches, tablet pouch, location to park cable when not in use and an attenuation reference chart is included as a tag. This design also offers smooth cable payout and quick access for reel replacements using the zipper opening on the side of the bag. This packaging design also has rubber feet and a moisture-resistant base on the bottom of the bag. This packaging option reduces waste by eliminating the cardboard box packaging of the traditional design and through optimized pallet loading with the 500 ft. reel inserts.

#### Perfect Cube™ 500 Eco

The hard shell Perfect Cube™ 500 Eco offers a convenient shoulder strap, tool caddy, location to park cable while not in use and prep instructions and an attenuation chart printed on the sides. The unique internal design allows for smooth payout of the cable, which is loaded onto a cardboard spool.

#### Wooden Reel

The traditional wooden reel design can be used with all cable types. The PPC wooden reel offers 4 flange holes to park the cable when not in use and like all other PPC packaging, the cable includes sequential footage or meter markings that always let the tech know how much is remaining on the reel.
