Definition and Usage

The **hidden** attribute is a boolean attribute.

When present, it specifies that an element is not yet, or is no longer, relevant.

Browsers should not display elements that have the **hidden** attribute specified.

The **hidden** attribute can also be used to keep a user from seeing an element until some other condition has been met (like selecting a checkbox, etc.). Then, a JavaScript could remove the hidden attribute, and make the element visible.

Browser Support

The numbers in the table specify the first browser version that fully supports the attribute.

Attribute					
hidden	6.0	11.0	4.0	5.1	11.1

Syntax

```
<element hidden>
```
