Our Diet Impacts Our Health & Vitality

Leading global health authorities like the World Health Organization, Centers for Disease Control, American Heart Association, National Cancer Institute, and American Diabetes Association agree that the key to promoting health is eating a nutrient-rich diet that includes whole grains, fruits & vegetables, and fish.

- Almost 90% of Americans do not meet the vegetable intake recommendation, about 80% do not meet the recommendation for fruits.¹
- Ultra-processed foods make up 57% of calories consumed in the typical American diet.²
- 98% of Americans do not meet the recommendations for whole grains but most of us are exceeding the limits for refined grain intake.¹
- Protective lipids and sterols have been stripped from whole grains to increase their shelf life.
- Many don't eat fish due to concerns about the presence of heavy metals and contaminants.
- A majority of people are below the estimated average requirement for some basic, essential vitamins and minerals.

Good Nutrition Can Optimize Health

- Everyone should increase consumption of whole-grain foods, fruits and vegetables, and foods rich in omega-3 fatty acids—and maintain a healthy weight.
- But even those with good intentions to eat a healthy diet face challenges. Busy lifestyles, eating on-the-run, and the prevalence of processed foods all contribute towards nutritional gaps that would benefit from nutritional supplements.

NEOLIFESHAKE

The quality of the Western diet has dramatically declined in recent years. We are no longer getting the right balance of macronutrients (protein, fat and carbohydrate), micronutrients (vitamins and minerals), nor the fibre, phytonutrients, and antioxidants our bodies need everyday to maintain and promote health. For example, although we are getting more than enough protein in our diets, we are getting it from animal and dairy products which are laden with fat and cholesterol. Studies have shown that poor diet is strongly associated with poor health. Along with a sedentary lifestyle, this has played a role in leading to the high incidence of malnutrition, weight gain, and chronic diseases.

Support a Healthy Lifestyle with Wholesome, Balanced Nutrition

- Protein is a key component of every cell in our body and essential for cellular nutrition and energy. Studies show that higher protein diets help suppress hunger, increase satiety and burn fat, thereby promoting weight loss and making it easier to stay on a weight loss program.
- Wholesome, balanced nutrition and an active lifestyle can also support weight management success.
- Getting all of our essential vitamins and minerals is vital to the proper functioning of our immune and nervous systems, preventing illnesses and diseases, and keeping us healthy and radiant. The right balance of macronutrients and micronutrients will keep your body functioning optimally.

Our Solution: NeoLifeShake For Daily Nutrition

La qualité de l'alimentation occidentale s'est considérablement dégradée ces dernières années. Nous n'ingérons plus un équilibre approprié de macronutriments (protéines, lipides et glucides), de micronutriments (vitamines et minéraux), ni de fibres, de phytonutriments et d'antioxydants dont notre corps a besoin tous les jours pour maintenir et promouvoir la santé. Ainsi, même si nous tirons une quantité plus que suffisante de protéines de notre alimentation, nous les obtenons à partir de produits d'origine animale et laitière qui abondent en gras et en cholestérol. Des études ont montré qu'une piètre alimentation est étroitement liée à un mauvais bilan de santé. Cela, de pair avec un mode de vie sédentaire, joue un rôle déterminant dans la forte incidence de malnutrition, gain de poids et maladies chroniques.

Une nutrition équilibrée et saine à la base d'un mode de vie sain

- Les protéines, composantes clés de chaque cellule de notre corps, sont indispensables à la nutrition et l'énergie cellulaires. Des études montrent que les régimes à teneur plus élevée en protéines contribuent à réprimer la faim, à accentuer la sensation de satiété et à brûler les graisses, ce qui favorise la perte de poids et l'assiduité à tout programme d'amaigrissement.
- Une alimentation équilibrée et saine, alliée à un mode de vie actif, peut également favoriser la gestion du poids avec succès.
- Il est indispensable d'obtenir toutes les vitamines et tous les minéraux qui sont essentiels au bon fonctionnement de nos systèmes immunitaire et nerveux, à la prévention des problèmes médicaux et des maladies, ainsi qu'au maintien d'un bon état de santé. Le juste équilibre en macronutriments et micronutriments, c'est ce qui permet de préserver le fonctionnement optimal de l'organisme.
