

NEOLIFESHAKE

The quality of the Standard American Diet (S.A.D.), often referred to as the Western diet, has dramatically declined in recent years. We are no longer getting the right balance of macronutrients (protein, fat and carbohydrate), micronutrients (vitamins and minerals), nor the fiber, phytonutrients, and antioxidants our bodies need everyday to maintain and promote health. For example, although we are getting more than enough protein in our diets, we are getting it from animal and dairy products which are laden with fat and cholesterol. Studies have shown that poor diet is strongly associated with poor health. Along with a sedentary lifestyle, this has played a role in leading to the high incidence of malnutrition, weight gain, and chronic diseases.

Support a Healthy Lifestyle with Wholesome, Balanced Nutrition

- Protein is a key component of every cell in our body and essential for cellular nutrition and energy. Studies show that higher protein diets help suppress hunger, increase satiety and burn fat, thereby promoting weight loss and making it easier to stay on a weight loss program.
- Wholesome, balanced nutrition and an active lifestyle can also support weight management success.
- Getting all of our essential vitamins and minerals is vital to the proper functioning of our immune and nervous systems, preventing illnesses and diseases, and keeping us healthy and radiant. The right balance of macronutrients and micronutrients will keep your body functioning optimally, weight loss or weight management program.

NEOLIFESHAKE

La calidad de la Dieta Americana Estándar (S.A.D) a la que comúnmente nos referimos como “la dieta Occidental” ha decaído drásticamente en los últimos años. Ya no recibimos el equilibrio adecuado de macronutrientes (proteínas, grasas y carbohidratos), micronutrientes (vitaminas y minerales), ni la fibra, fitonutrientes y antioxidantes que nuestro cuerpo necesita todos los días para mantener y promover nuestra salud. Por ejemplo, a pesar de que recibimos más que suficiente proteína en nuestras dietas, proviene de animales y productos lácteos colmados de grasa y colesterol. Estudios han demostrado que una dieta pobre está fuertemente relacionada con una salud pobre. Junto con el sedentarismo todo esto ha jugado un papel importante en la alta incidencia de desnutrición, aumento de peso y las enfermedades crónicas.
