

DIRECTIONS FOR USE

FLOWERS AND VEGETABLE GARDENS—For the finest quality garden vegetables and flowers of outstanding beauty, add 1 lb. of **EXCELERITE**® to each 40 square feet of soil (same for lawns). Work **EXCELERITE**® into the topsoil and water directly to saturate completely.

HOUSEPLANTS—Add between one heaping teaspoon to two full tablespoons of **EXCELERITE**® depending on pot and plant size; mix carefully with potting soil. Apply normal amount of water on the same day.

LAWNS—Apply 1 lb. of **EXCELERITE**® to every 40 square feet of lawn. On newly seeded lawns, apply to topsoil and rake well over entire surface. For old lawns, apply **EXCELERITE**® evenly, and sprinkle gently with water immediately after application to prevent wind dispersion.

SHRUBS, HEDGES and BUSHES—Apply one ounce (1 oz.) of **EXCELERITE**® to each 2.5 square feet of topsoil and mix-in thoroughly as soon as possible.

TREES—For a first time application or if the tree is sickly, add 50 lbs. of **EXCELERITE**®. This applies to large or older trees as well. For young trees, 20- 25 lbs. is usually sufficient. Apply in a circle trench 2-3' wide and at least 3" deep centered at the drip line of branches. Thoroughly mix with soil for best results. Water as usual. For healthy trees, reduce quantity by 50% on subsequent applications for the next two years, and then apply this reduced amount only every other year thereafter, or less according the observed results in your particular soil.

LARGE ACREAGE/ FARMS—Add 500 lbs. of **EXCELERITE**® per acre if applied as dry powder. It may also be liquefied prior to application for more rapid results. It can also be mixed with 2 to 5% per ton of compost or fertilizer.

EXCELERITE® is an all-natural product quarried in Panaca, Nevada. The formation has been known for years under various trade names as a valuable soil conditioner and fertilizer booster. Documented testimonials spanning seven decades attest to the efficacy of adding chelated minerals in trace amounts in a clay medium to a conscientious fertilization and watering program. With many plant families results can be measured within just 2-3 weeks from application as directed. Remineralize your soil and tell us about your success with houseplants, lawns and golf courses, crops and vegetable gardens, fruit and nut trees, flowers, and hedges.
