

HUMAN HEALTH & MICRO-EXCELERITE

Suggested use as dietary supplement

MICRO-EXCELERITE contains a superior grade of CLAY MINERAL CALCIUM MONTMORILLONITE mined from the sustainable ancient “Panaca Source” in Nevada. It is 100% natural and organic with no additives and contains 72 naturally occurring minerals, including all 16 of the Macro and Micro Essential Minerals vital for the human body to maintain good health. *It's healing CLAY MINERAL CALCIUM MONTMORILLONITE properties help to:*

- Increase immunity and reduce inflammation
- Produce energy
- Protect the body from disease
- Digest food and cleanse the digestive system
- Regulate Cholesterol
- Balance the body's pH 6.7 – 7.3
- Promote probiotics in the gut wall
- Seek and help remove toxins, chemicals, impurities and “heavy metals” from the gut, skin and mouth.

✓ **Boosts Immunity by Killing Harmful Bacteria and Viruses**

CLAY MINERAL CALCIUM MONTMORILLONITE has been found to be effective at killing harmful bacteria. In a study published by the *Journal of Antimicrobial Chemotherapy*, “results indicate that specific mineral products have intrinsic, heat-stable antibacterial properties, which could provide an inexpensive treatment against numerous human bacterial infections.”

CLAY MINERAL CALCIUM MONTMORILLONITE benefits your immune system by keeping the gut wall strong. Much of the immune system lives inside of the gut, and when the gut wall is compromised, toxins are better able to leach into the bloodstream and cause serious problems.

By protecting the gut wall and decreasing the amount of pesticides, toxins, bacteria and chemicals that could potentially enter the blood, the body is better able to protect its health.

✓ **A potentially powerful new antibiotic has been discovered in dirt:**

In a [study published in the journal Nature Microbiology](#), Sean Brady, an associate professor at Rockefeller University in New York, and his colleagues report the discovery of a new class of antibiotic extracted from unknown microorganisms living in the soil. This class, which they call malacidins, kills several superbugs — including the dreaded [methicillin-resistant *Staphylococcus aureus* \(MRSA\)](#)— without engendering resistance.

✓ **Boosts Probiotics**

By removing toxins, digestive-distress causing chemicals and heavy metals from the gut, Calcium Montmorillonite Clay helps to promote the “good bacteria” or probiotics living in your gut wall and decrease the amount of harmful “bad bacteria.”

A healthy gut wall prevents us from experiencing malabsorption of nutrients from our food, increases our immunity, and helps to elevate our mood and brain function. Research has also shown that Calcium Montmorillonite Clay can bind to particular toxins like [aflatoxins](#) that are common in the standard diet, found in things like peanuts and some grains.

When left unattended, an influx of aflatoxins can contribute to liver damage and potentially even the onset of certain cancers. Because of Calcium Montmorillonite Clay negatively charged electrons, it's able to withstand acids found in the gut and survive long enough to bind to toxins.

✓ **Relieves Digestive Problems (Constipation, IBS, Nausea, etc.)**

Thanks to its ability to neutralize bacteria in the gut and kill viruses, Calcium Montmorillonite Clay helps to alleviate many digestive problems. It is often used as relief for nausea and vomiting by pregnant women, is a safe way to **remedy constipation** and helps with IBS.

✓ **Alkalizes the Body**

Much of the food that are present in the “Standard American Diet” have an acidic reaction in the body, meaning they alter the body's preferred pH level to make it more acidic than we'd like for it to be. Calcium Montmorillonite Clay contains alkalizing minerals, which brings the level of the body's pH to a more optimal balance between acidity and alkalinity, helping to make the blood, saliva and urine more alkaline.

✓ **Purifies Water**

CLAY MINERAL CALCIUM MONTMORILLONITE has been researched as an effective way to remove some of the fluoride that is often in drinking water. When combined with magnesium, the clay has been shown to benefit the purity of tap water.

✓ **Used on the Skin to Treat Eczema, Dermatitis & Psoriasis**

When combined with water and left to dry on the skin as a clay mask, the clay is able to bind to bacteria and toxins living on the surface of the skin and within pores to extract these from the pores. This helps to reduce the outbreak of blemishes, alleviate redness, and also to fight allergic reactions from irritating lotions or face washes, and even soothes poison ivy.

Thanks to the clay's special ability to act as an antibiotic treatment when applied topically to the skin, the clay can help calm skin infections and speed the healing time of wounds or **eczema**, even when prescription antibiotics were not able to help solve the problem.

✓ **Used in the Bath as a Soaking Liquid to Remove Toxins**

The clay can be added to your bath water and used as a soaking liquid, binding to the toxins that are dispelled from your skin. The clay leaves skin feeling smooth, hydrated, and less inflamed, all while you relax in the tub effortlessly!

✓ **Allows Cells to Receive More Oxygen**

Calcium Montmorillonite Clay helps to get oxygen into the cells because it has the ability to pull excess hydrogen from the cells, leaving room for oxygen to take its place.

✓ **Improves the Health of Teeth and Gums**

The mouth is one of the most susceptible areas of the body when it comes to harmful outside "invaders" taking over, like bacteria and toxins.

CLAY MINERAL CALCIUM MONTMORILLONITE binds to unhealthy substances in the mouth, such as around the teeth and on the tongue and gums, and helps to remove them before you swallow and become ill.

✓ **Useful as a Baby Powder Alternative** CLAY MINERAL CALCIUM

MONTMORILLONITE can be applied to any area on the skin of babies that is irritated, red or needs soothing in the same way that traditional powders are used. Plus, it is very gentle and naturally cleansing.

✓ ***Information based on original research and excerpts from the book *The Trace Mineral Story*, by Melchior Dikkers PhD-- research biochemist.
