

How to Take Care of Your Ice Skates

Skate Care

DRYING & PROTECTING BLADES WITH CLOTH SOAKERS

Dry your blades and boots with a soft towel.
Wipe off the ice and slush from both sides of your blades.
Dry each side of the boot.

Also dry the mounting plates and the soles of your boots.
Moisture can get in between the plates and the sole of the boot.
Careful drying increases boot and blade life.

"Soakers" absorb condensation and protect your blades from nicks.
Before you put skates in your skate bag, put cloth soakers on the blades.

PLASTIC GUARDS

Plastic "hard guards" are for blade protection while walking in skates.
Do not use guards for storage - you will get rusty blades.
