

2026 Data Disaggregation

Introduction

The disaggregation of achievement in this report is based on the final G.P.A. of the 42 students from the following cohorts:

2024-26 (18 students)
2023-25 (10 students)
2022-24 (14 students)

Findings

The disaggregation of data shows there to be **no significant variance in achievement** (higher or lower) by any subgroups of the student population seen as meaningful to the College for Officer Training.

Data

The tables below present the number of students in each subgroup (n), the subgroup's average final GPA, the variance from the overall student average final GPA of 3.67, and an indication of whether the variance represents a meaningful difference in achievement. For the purposes of this analysis, a variance of more than 0.50 GPA points above or below the institutional average is considered significant.

Note: when a subgroup contains 2 or less students, the data is not included as no meaningful conclusions can be drawn.

Gender	(n)	Average G.P.A	Variance	Significant Difference
Female	18	3.62	-0.05	No
Male	24	3.70	0.03	No

Difference between highest (Male) and lowest (Female) achieving subgroup = 0.08. No Significant Difference.

Age Range	(n)	Average G.P.A	Variance	Significant Difference
18-25	11	3.79	0.12	No
26-45	26	3.61	-0.06	No
46+	5	3.70	0.03	No

Difference between highest (18-25) and lowest (26-45) achieving subgroup = 0.18. No Significant Difference.

Ethnicity	(n)	Average G.P.A	Variance	Significant Difference
African American/Black	1	-	-	-
Asian	3	3.69	0.02	No
Caucasian/White	14	3.73	0.06	No
Hawaiian/Pacific Islander	5	3.50	-0.17	No
Hispanic/Latino	12	3.63	-0.04	No
Mixed	7	3.67	0.00	No

Difference between highest (Caucasian/White) and lowest (HI/Pacific Islander) achieving subgroup = 0.23.
No Significant Difference.

Marital Status	(n)	Average G.P.A	Variance	Significant Difference
Single	8	3.71	0.04	No
Single with children	2	-	-	-
Married	10	3.76	0.09	No
Married with children	22	3.62	-0.05	No

Difference between highest (Married) and lowest (Married w/Children) achieving subgroup = 0.14.
No Significant Difference.

Salvation Army Heritage	(n)	Average G.P.A	Variance	Significant Difference
1st Generation	22	3.63	-0.04	No
2nd Generation	5	3.67	0.00	No
3rd Generation	5	3.54	-0.13	No
4th Generation	3	3.87	0.20	No
5th Generation	4	3.79	0.12	No
6th Generation	1	-	-	-
7th Generation	1	-	-	-
8th Generation	1	-	-	-

Difference between highest (4th) and lowest (3rd) achieving subgroup = 0.33. No Significant Difference.

Previous Education	(n)	Average G.P.A	Variance	Significant Difference
Highschool Diploma/GED	32	3.66	-0.01	No
Degree	10	3.69	0.02	No

Difference between highest (Degree) and lowest (No Degree) achieving subgroup = 0.03.
No Significant Difference.

Comparison to Previous Reports

2026

- ▶ The disaggregation of data shows there to be no significant variance in achievement (higher or lower) by any subgroups of the student population seen as meaningful to the College for Officer Training.
- ▶ The highest achieving subgroup is 4th generation salvationists (0.2 above the average)
- ▶ The lowest achieving subgroup is cadets who identify as Hawaiian/Pacific Islander (0.17 below average)
- ▶ The largest variance (0.34) is between 3rd and 4th generation salvationist cadets.

2025

- ▶ The disaggregation of data shows there to be no significant variance in achievement (higher or lower) by any subgroups of the student population seen as meaningful to the College for Officer Training.
- ▶ The highest achieving subgroup is married cadets (0.21 above the average)
- ▶ The lowest achieving subgroup is cadets who are married with children and those who identify as Hawaiian/Pacific Islander (0.19 below average).
- ▶ The largest variance (0.4) is between those who are married and those who are married with children.

2024

- ▶ The disaggregation of data shows there to be no significant variance in achievement (higher or lower) by any subgroups of the student population seen as meaningful to the College for Officer Training.
- ▶ The highest achieving subgroup is married cadets (0.19 above the average)
- ▶ The lowest achieving subgroup is cadets who are married with children (0.23 below average)
- ▶ The largest variance (0.42) is between those who are married and those who are married with children.

2023

- ▶ The disaggregation of data shows there to be no significant variance in achievement (higher or lower) by any subgroups of the student population seen as meaningful to the College for Officer Training.
- ▶ The highest achieving subgroup is cadets who have a degree (0.20 above the average)
- ▶ The lowest achieving subgroup is cadets who do not have a degree (0.19 below average)
- ▶ The largest variance (0.39) is between those who have a degree already and those who do not.

No commonality/trends exist within the above data.
