<p>A few thoughts: 1) Could this project also include partial funding for a bike-walk bridge from JLS to alameda? Or funding for a water taxi system across the estuary? (Purpose would be traffic reduction of fans traveling by car to the game) 2) what is the expected noise level on the alameda side? How far into central alameda will the noise travel? It appears that the noise will be aimed at alameda, given the orientation of the field/walls or lack thereof. Pls describe. 3) fireworks/late night noise/light pollution - what is the expected impact on the alameda side? 4) will the coliseum host dance parties and such, as I believe the current coliseum does? We sometimes hear the events currently, here in alameda. 5) I know you are working on traffic mitigation for JLS...pls clarify how the Webster tube traffic out of alameda might be impacted on game days. Thank you.</p>
