Derived from: Zinc Chloride, Zinc Oxide, Zinc EDTA, Citric Acid and Ammonium Hydroxide.

KEEP OUT OF REACH OF CHILDREN

CAUTION

DIRECTIONS FOR USE:
This product is recommended to correct zinc deficiencies. This product should be used on the basis of a soil and/or tissue analysis. For fertilizer application rates suitable for your geographical area or the maximum allowable application rate per acre, consult a certified crop advisor or a trained agronomist. For specific crop recommendations in your area, consult your state’s recommendations. Optimum rate of application will vary among fields, depending on soil pH, organic matter, and crop.

Mixing Instructions:
1. Put 1/3 water or fertilizer in tank.
2. Add other pesticides.*
3. Fill tank with balance of water or fertilizer.
4. Add CITRI-CHE ZINC 10%.
5. Agitate adequately to mix.

*CAUTION: Check compatibility with orthophosphate fertilizers and other chemicals prior to mixing.

Soil Application: CITRI-CHE ZINC 10% can be applied in water or in combination with liquid fertilizer for pre-plant, starter or side dress applications. The most effective treatment of row crops is soil applications in a band at planting time or as a side dressing shortly after planting. For dry fertilizer applications use CITRI-CHE granular micronutrients.

Apply 1-6 quarts of CITRI-CHE ZINC 10% per acre in liquid starter fertilizer. Rate will depend upon extent of the zinc deficiency and soil conditions.

Foliar Application: CITRI-CHE ZINC 10% diluted with water according to label recommendations, can be applied as a foliar spray. To insure even distribution on the leaf surfaces and increase the effectiveness of foliar application a small amount of wetting agent or surfactant may be added.

For ground application dilute 1 quart per acre of CITRI-CHE ZINC 10% in 3-20 gallons of water or for aerial application, dilute 1 quart per acre of CITRI-CHE ZINC 10% in 2-5 gallons of water. Spray to thoroughly cover foliage. Rates and timing of applications are dependent on local conditions and practices. Apply 4-6 weeks after planting. An ammonium sulfate source is recommended when tank mixing with glyphosate and some other herbicides.

1/0307/1
Net Wt: 26.0 lbs. (11.79 kg.)
Weight Per Gallon: 10.4 pounds (4.72 kg)
Net Contents: 2.5 Gallons (9.46 L)

**Note**: Foliar spray of CITRI-CHE ZINC 10% should not be considered as a substitute for soil application, but rather a supplement or temporary measure to correct zinc deficiency in most crops. A number of variables influence the rate of application necessary to control or correct a specific deficiency. For best results follow good agronomic practices.

For Use In Wisconsin – Use 0.5 – 1 lb/acre of zinc chelate in a band or 1-2 lbs/acre of zinc chelate in a broadcast application. Deficiencies may also be corrected by using 0.15 lbs/acre of zinc chelate as a foliar application.

One gallon of CITRI-CHE ZINC 10% contains 1.02 lbs. of actual zinc.

**CAUTION**
Harmful if swallowed. Avoid breathing spray mist. May cause irritation of eyes, nose, throat, or skin. Avoid contact with eyes, skin, or clothing. In case of contact with eyes, flush with a lot of water. Consult physician if irritation persists.

**STORAGE AND DISPOSAL**
Store above 32°F. Do not reuse empty container. Triple rinse, and then offer for recycling or for disposal in a sanitary landfill, or by other means approved by State and local authorities.

For Chemical Spill, Leak, Fire or Exposure, Call Chemtrec (800) 424-9300
