FIFRA Section 2(ee) Recommendation: This recommendation is made as permitted under FIFRA Section 2(ee) and has not been submitted to or accepted by the U.S. Environmental Protection Agency. It is a violation of federal law to use this product in a manner inconsistent with its label. This product bulletin must be in the possession of the user at the time of pesticide application. Follow all applicable directions, restrictions, Worker Protection Standard requirements, and precautions on the EPA registered label.

DIRECTIONS FOR USE

It is a violation of Federal law to use this product inconsistent with its labeling.

Axiom® DF Herbicide can be applied in the Fall for suppression of annual ryegrass (Lolium spp.) prior to planting the following Spring of field corn, white corn, corn grown for silage and soybean.

Fall applications at the rates described below will not provide adequate residual control of weeds emerging in the following spring. However, a sequential application of Axiom® alone, or in combination with approved tank-mix partners, may be used in the spring as described on the label, but the total of the fall and spring applications should not exceed the maximum Axiom® use rate for the particular soil characteristics where applied. Use rates of Axiom® vary according to soil texture and organic matter content. Refer to the label for specific rate information. Applications can be made in conventional, conservation or no-till crop management cropping systems.

Other herbicides such as Liberty® Herbicide in Liberty link corn, or Option® Corn Herbicide or Equip™ Corn Herbicide may be used to complete weed control in the corn crop in the following spring. Alternatively, tillage and/or sequential applications of other approved herbicides can be made soil-applied and/or postemergence to the corn crop in the following spring to complete weed control.

Refer to the Axiom® and other individual product labels for additional information, precautions and limitations. Always follow the most restrictive label.

RECOMMENDED APPLICATIONS

<table>
<thead>
<tr>
<th>CROP</th>
<th>WEEDS</th>
<th>RATE PER ACRE</th>
</tr>
</thead>
<tbody>
<tr>
<td>Field corn, white corn, corn grown for silage and soybean</td>
<td>Annual Ryegrass (Lolium spp.) suppression only</td>
<td>9 to 13 oz.</td>
</tr>
</tbody>
</table>

APPLICATION INFORMATION:

The specified rate per acre should only be applied by ground as a uniform broadcast spray using 10 or more gallons of spray carrier per acre.

For best control of annual ryegrass, make application prior to the 1-leaf stage of the weed. If ryegrass has begun to emerge but is still less than the 1-leaf stage, always mix Axiom® with recommended adjuvants for additional burndown control.
