12. ECOLOGICAL INFORMATION

ENVIRONMENTAL HAZARDS: This pesticide may be toxic to fish and invertebrates. Do not apply directly to water, to areas where surface water is present, or to intertidal areas below the mean high water mark. Drift and runoff may be hazardous to aquatic organisms in water adjacent to treated areas. Do not contaminate water when disposing of equipment wash waters or rinsate. This product may contaminate water through drift of spray in wind. This product has a potential for runoff for several days to weeks after application. Poorly draining soil with shallow water tables is more prone to produce runoff. A level, well maintained vegetative (grass) buffer strip between areas to which this product is applied and the surface water features such as ponds, streams, and springs will reduce the potential for contamination of water from rainfall runoff. Runoff of this product will be reduced by avoiding applications when rainfall is forecasted to occur within 48 hours. Sound erosion control practices will reduce this product's contribution to surface water contamination.

Persistence/degradability (Novaluron): Half-life time (t_{1/2}): 68-76 days, soil.

Ecotoxicity :

Birds: LD₅₀ > 2000 mg/kg.

Fish: LC₅₀ = 62.4 mg/l, 96 hours (rainbow trout).

Daphnia magna: EC₅₀ = 4.22 µg/l, 48 hours.

Daphnia magna: NOEC = 1.25 µg/l, 48 hours.

Algae: NOEC = 27.2 mg/l, 72 hours (growth rate).

Algae: NOEC = 10.2 mg/l, 72 hours (biomass).
