STORAGE AND DISPOSAL
Do not contaminate water, food, or feed by storage or disposal.

PESTICIDE STORAGE: Store unused product in original container only in a dry, temperature-controlled, secure, place.

PESTICIDE DISPOSAL: Wastes resulting from the use of this product may be disposed of on-site or at an approved waste disposal facility.

CONTAINER DISPOSAL: Nonrefillable container. Do not reuse or refill this container. Triple rinse container (or equivalent) promptly after emptying. Triple rinse as follows: Empty the remaining contents into application equipment or a mix tank and drain for 10 seconds after the flow begins to drip. Fill the container full with water and recap. Shake for 10 seconds. Pour rinse into application equipment or a mix tank or store rinse-safe for later use or disposal. Drain for 10 seconds after the flow begins to drip. Repeat this procedure two or more times. Offer for recycling, if available, or puncture and dispose of in a sanitary landfill, by incineration, or if allowed by state and local authorities, by burning. If burned, stay out of smoke. [For 2-1/2 gal jugs]

FOR BULK AND MINI-BULK CONTAINERS [40 gal. tanker truck and 260 gal. totes]
Container Disposal: Refillable container. Refill this container with pesticide only. Do not reuse this container for any other purpose. Cleaning the container before final disposal is the responsibility of the person disposing of the container. Cleaning before refilling is the responsibility of the refiller. To clean the container or before final disposal, empty the remaining contents from this container into application equipment or mix tank. Fill the container about 10 percent full with water. Agitate vigorously or recirculate water with the pump before final disposal. For effective cleaning, the container must be thoroughly rinsed procedure two more times. When the container is empty, replace the cap and seal all openings that have been opened during use, and return to the point of purchase, or to a designated location named at the time of purchase of this product. Prior to refilling, inspect carefully for damage such as cracks, punctures, abrasions, worn-out threads and closure devices. Check for leaks after refilling and before transporting. Do not transport if this container is damaged or leaking. If the container is damaged or leaking, call Chem-Trec. If the container is damaged and leaking or material has been spilled, follow these procedures:

- Cover spill with absorbent material.
- Sweep into disposal container.
- Wash area with detergent and water and follow with clean water rinse.
- Do not allow to contaminate water supplies.
- Dispose of according to instructions.

If not returned to the point of purchase or to a designated location, clean empty container as instructed above and offer for recycling. Disposal of this container must be in compliance with state and local regulations.

This CONTAINER IS NOT SAFE FOR FOOD, FEED OR DRINKING WATER.

WARRANTY AND LIMITATION OF DAMAGES
CONDITIONS OF SALE: To the extent consistent with applicable law, Sipcam Agro USA, Inc. warrants that this product conforms to the chemical description on the label and is reasonably fit for the purposes stated on the label when used in accordance with the directions under normal conditions of use. PRECAUTIONARY STATEMENTS

HAZARDS TO HUMANS AND DOMESTIC ANIMALS

CAUTION

 Harmful if inhaled or absorbed through skin. Avoid contact with eyes, skin, or respiratory tract inflamation. Avoid contact with skin, eyes or clothing. Wash thoroughly with soap and water after handling and before eating, chewing gum, or smoking. Use in a well ventilated area.

PERSONAL PROTECTIVE EQUIPMENT: PE (PPE)

Some materials that may be hazardous to health are:

- Aerosol sprays, liquid or solid, 14 µm, nickel sulfide, 14 µm, polyether oxide (PEO) > 60 µm, and viton > 14 µm.

If you want more options, follow the instructions for Category C on an EPA chemical resistance category selection chart.

Applications and other handlers must wear:

- Long-sleeved shirt and long pants
- Shoes plus socks
- Chemical-resistant gloves
- Chemical-resistant face mask
- Chemical-resistant raincoat
- Respirator
- Protective glasses
- Protective boots
- Protective rubber overshoes
- Rubber or neoprene apron
- Rubber or neoprene overalls
- Wash the outside of gloves before removing. As soon as possible, wash thoroughly and change into clean clothing.

ENVIRONMENTAL HAZARDS:

This product may be toxic to fish and aquatic invertebrates. Do not apply directly to water, or to areas where surface water is present, or to intertidal areas below the mean high water mark. Drift or runoff from treated areas may be hazardous to aquatic organisms adjacent to treatment areas. Exercise care when making applications on aquatic surfaces that are intended to be protected from application. Don’t use海洋 applications for benthic or aquatic organisms adjacent to treatment areas. Exercise care when making applications of this product, and do not apply when atmospheric conditions favor drift or runoff. Do not contaminate water when disposing of equipment washwater.

In order to mitigate concern for reproductive effects to endangered bird and mammal species which may occur incidentally in sugarbeet growing areas, you are required to ascertain through the state Department of Fish and Game that use of this product is not likely to result in the death of any listed or threatened fish or wildlife species. Applications must be carefully planned to avoid treatment of areas frequented by species that may be listed or threatened. If such areas are treated, you must obtain the following permits before making applications.

- Federal permits for endangered species
- State permits for listed species
- Permits from local wildlife authorities

AGRICULTURAL USE REQUIREMENTS

This product should be used only on the label specified crops. The following statements apply to personal protective equipment (PPE) and restricted-entry interval. The requirements in this book only apply to uses of this product that are covered by the Worker Protection Standard (WPS). Do not enter or allow worker entry into treated areas during the restricted entry interval (REI) of 12 hours. For early entry to treated areas that is permitted under the Worker Protection Standard and that involves contact with anything that has been treated, such as plants, soil, or water, wear:

- Respirator
- Chemical-resistant gloves
- Shoes plus socks

GENERAL USE INFORMATION:

PHYSICAL AND CHEMICAL PROPERTIES:

Eminent 125SL is a liquid formulation of 236 g/L chlorothalonil. Eminent 125SL contains a sterol demethylation inhibitor (sterol DMI) fungicide. This product should be applied as a 12 oz./Acre spray. Do not exceed recommended use rates of 1.5 oz./Acre. Do not mix or alternate this product with any other pesticides. This product should be used for disease management in situations where disease pressure is being managed using a three fungicide approach. Use this product only in accordance with its labeling and with the Worker Protection Standard, 40 CFR part 190. This Standard contains requirements for training, certification, notification, and emergency assistance. It also contains specific instruction and exceptions pertaining to worker protection.

AGRICULTURAL USE REQUIREMENTS (continued)

The statements on the label about personal protective equipment (PPE) and restricted-entry interval. The requirements in this book only apply to uses of this product that are covered by the Worker Protection Standard (WPS). Do not enter or allow worker entry into treated areas during the restricted entry interval (REI) of 12 hours. For early entry to treated areas that is permitted under the Worker Protection Standard and that involves contact with anything that has been treated, such as plants, soil, or water, wear:

- Respirator
- Chemical-resistant gloves
- Shoes plus socks

GENERAL USE INFORMATION:

Apply Eminent 125SL in water carrier by spraying onto crop surfaces that are intended to be protected from disease. To obtain adequate coverage of typical agricultural crops, total spray volume usually will range from 20 to 100 gallons per acre (200 to 1400 liters per hectare) for dilute sprays, and 5 to 10 gallons per acre (50 to 100 liters per hectare) for contact and aircraft applications. Both ground and aircraft methods of application are recommended. Do not apply Eminent 125SL to the spray tank while filling with water. Keep the agitator running when filling spray tank and during spray operations. When tank mixing this product with other pesticides observe the more restrictive label limitations and precautions. No label dosage rates should be exceeded. Combination in the spray tank with pesticides, fertilizers, or surfactants are not recommended unless prior use has shown the combination to be physically compatible, effective, and non-injurious under your conditions of use.

Controlled Environment:

Eminent 125SL contains a sterol demethylation inhibitor (sterol DMI) fungicide. This product should be applied in tank mix or in alternate applications with non-DMI fungicides as a resistance management strategy.

Do not mix or alternate Eminent 125SL with other DMI fungicides.

AGRICULTURAL CROPS:

13 fluid ounces 14 days 14 days

Apply Eminent 125SL at intervals of 21 to 28 days, beginning when conditions are favorable for Cercospora leaf spot or powdery mildew. Applications of this product must be alternated with a non-fungicide fungicide which is registered for use on sugarcane. If the alternate fungicide is being applied for control of preharvest or postharvest disease, no more than two (2) applications of this product may be made per growing season. Crop injury, lack of effectiveness or illegal pesticide residues in the crop can result from non-uniform distribution of treated water.

Do not apply this product through any other type of irrigation system.

Crop injury, lack of effectiveness or illegal pesticide residues in the crop can result from non-uniform distribution of treated water.

Do not connect an irrigation system used for pesticide application to a public water supply system unless the pesticide equipment is designed and constructed of materials that are compatible with pesticides and capable of being fitted with a system interlock.

The system must contain functional interlocking controls to automatically shut off the pesticide injection pump when the water pump motor stops.

The system must contain a functional check valve, vacuum relief valve, and low pressure drain appropriately located on the irrigation system to prevent water from being withdrawn from the supply tank when the irrigation system is either automatically or manually shut down. The system must contain functional interlocking controls to automatically shut off the pesticide injection pump when the water pump motor stops.

Do not connect an irrigation system used for pesticide application to a public water supply system unless the pesticide equipment is designed and constructed of materials that are compatible with pesticides and capable of being fitted with a system interlock.

The system must contain a functional check valve, vacuum relief valve, and low pressure drain appropriately located on the irrigation system to prevent water from being withdrawn from the supply tank when the irrigation system is either automatically or manually shut down. The system must contain functional interlocking controls to automatically shut off the pesticide injection pump when the water pump motor stops.

Do not apply this product through any other type of irrigation system.
AGRICULTURAL USE REQUIREMENTS (continued)

The statements on this label about personal protective equipment (PPE) and restricted-entry interval. The requirements in this box only apply to uses of this product that are covered by the Worker Protection Standard.

Do not enter or allow worker entry into treated areas during the restricted entry interval (REI) of 12 hours. For early entry to treated areas that is permitted under the Worker Protection Standard and that involves contact with anything that has been treated, such as plants, soil, or water, wear:

- Coveralls
- Chemical-resistant gloves
- Shoes plus socks

GENERAL USE INFORMATION:

Apply EMINENT 125SL in water carrier by spraying into crop surfaces that are intended to be protected from diseases. To obtain adequate coverage of typical agricultural crops, total spray volume usually will range from 20 to 50 gallons per acre (200 to 1400 liters per hectare) for dilute sprays, and 5 to 10 gallons per acre (50 to 150 liters per hectare) for concentrates and aircraft applications. Both pre- and post-harvest applications and methods of application are recommended.

The system must contain functional interlocking controls to automatically shut off the pesticide injection motor when the water pump motor stops. The system must also include a functional check valve, vacuum relief valves, and low pressure drain appropriately located on the irrigation pipeline to prevent water source contamination from backflow.

The pesticide injection pipeline must contain a functional, automatic, quick-closing check valve to prevent the flow of liquid back toward the irrigation system or, if a high pressure system is in place, an effective check valve.

Do not apply this product through any other type of irrigation system. Use this product only through one or more of the following types of systems: sprinkler including center pivot, lateral move, and row (side) wheel, transeptor, big gun, solid set or hand moved irrigation system. Do not apply this product through any other type of irrigation system.

Crops

Sugarbeets

Apply EMINENT 125SL at intervals of 3 to 28 days, beginning when conditions are favorable for Cercospora leafspot or powdery mildew. Applications of this product must be alternated with a non-DMI fungicide which is registered for use on sugarbeets. If the system contains multiple tank mixtures, the DMI fungicide must be the first ingredient applied and should not be mixed with other tank mix applications of 28 days apart. Do not make more than two (2) applications of this product per growing season. Crops other than sugarbeets and small grain must be at least 60 days old before the last application of EMINENT 125SL to prevent injury.

EMINENT 125SL can be applied through a traveling irrigation system immediately following last application of this product.

GENERAL CHEMIGATION INSTRUCTIONS:

Apply this product only through one or more of the following: transeptor, center pivot or lateral move, sprinkler including center pivot, lateral move, and row (side) wheel, transeptor, big gun, solid set or hand moved irrigation system. Do not apply this product through any other type of irrigation system.

Crop injury, lack of effectiveness or illegal pesticide residues in the crop can result from non-uniform distribution of treated water. For specific information about calibration, contact State Extension Service specialists, equipment manufacturers, or other irrigation experts.

Do not connect an irrigation system used for pesticide application to a public water supply system unless the pesticide label/procedures safety devices for public water supplies are in place. A person knowledgeable of the chemigation system and responsible for its operation, or supervision of the responsible person, shall shut the system down and make necessary adjustments should the need arise.

Sprinkler Chemigation:

The system must contain a functional check valve, vacuum relief valves, and low pressure drain appropriately located on the irrigation pipeline to prevent water source contamination from backflow. The system must contain functional interlocking controls to automatically shut off the pesticide injection motor when the water pump motor stops. The system must also include a functional check valve, vacuum relief valves, and low pressure drain appropriately located on the irrigation pipeline to prevent water source contamination from backflow. The system must contain functional interlocking controls to automatically shut off the pesticide injection motor when the water pump motor stops.
The statements on the label about personal protective equipment (PPE) and restricted-entry interval. The requirements in this box only apply to uses of this product that are covered by the Worker Protection Standard.

Do not enter or allow worker entry into treated areas during the restricted entry interval (REI) of 12 hours.

For early entry to treated areas that is permitted under the Worker Protection Standard and that involves contact with anything that has been treated, such as plants, soil, or water, wear:

- Coveralls
- Chemical-resistant gloves
- Shoes plus socks

GENERAL USE INFORMATION:

Apply EMINENT 125SL in water carrier by spraying onto crop surfaces that are intended to be protected from disease. To obtain adequate coverage of typical agricultural crops, total spray volume usually will range from 20 to 50 gallons per acre (200 to 1400 liters per hectare) for dilute sprays, and 5 to 10 gallons per acre (50 to 100 liters per hectare) for concentrate sprays and aircraft applications. Both chemical and physical compatibility methods of applications are recommended.

EMINENT 125SL should be added to the spray tank while filling with water. Keep the agitator running when filling spray tank and during spray operations. When tank mixing this product with other pesticides observe the more restrictive label imitations and precautions. No label dosage rate should be exceeded. Combination in the spray tank with pesticides, fertilizers, or surfactants are not recommended unless prior use has shown the combination to be physically compatible, effective, and non-toxic under your conditions of use.

EMINENT 125SL contains a serendipal deltamethrin inhibitor (stabilized DFTM fungicide). This product should be applied in tank mix or in alternate applications with non-DMF fungicides as a resistance management strategy.

Do not mix or alternate EMINENT 125SL with other DMF fungicides.

AGRICULTURAL CROPS:

CROP: Sugarbeets

AVERAGE RATE:

- Aerial applications: 13 fluid ounces (0.4 liters) per acre

PRE-IMPLANT INTERVAL: 14 days

APPLICATION DIRECTIONS:

- Apply EMINENT 125SL at intervals of 21 to 28 days, beginning when conditions are favorable for Cercospora leafblight or powdery mildew. Applications of this product must be alternated with a non-halflings fungicide which is registered for use on sugarbeets. If the product is to be used to prevent Cercospora leafblight or powdery mildew, applications for up to 14 days, applications of EMINENT 125SL should be no longer than 28 days apart.

- Do not make more than two (2) applications of this product per growing sea- son. Crops other than sugarbeet and small grains must not be grown within 120 days of application. For the last application of EMINENT 125SL, producers should consult the last application chart of this product.
STORAGE AND DISPOSAL

Do not contaminate water, food, or feed by storage or disposal.

PESTICIDE STORAGE: Store unused product in original container only in a dry, temperature-controlled, secure place.

PESTICIDE DISPOSAL: Wastes resulting from the use of this product may be disposed of on-site or at an approved waste disposal facility.

CONTAINER DISPOSL:

Nonrefillable container. Do not reuse or refill this container. Triple rinse container (or equivalent) promptly after emptying. Triple rinse as follows: Empty the remaining contents into application equipment or a mix tank and drain for 10 seconds after the flow begins to drip. Fill the container ¼ full with water and recap. Shake for 10 seconds. Pour rinseate into application equipment or a mix tank or rinse-safe for later use or disposal. Drain for 10 seconds after the flow begins to drip. Repeat this procedure two more times. Offer for recycling, if available, or puncture and dispose of in a sanitary landfill, by incineration, or if allowed by state and local authorities, by burning. If burned, stay out of smoke.

PESTICIDE DISPOSAL: Wastes resulting from the use of this product may be disposed of on-site or at an approved waste disposal facility. If not returned to the point of purchase or to a designated location, clean empty container as instructed on the label when used in accordance with the directions under normal conditions of use. This warranty does not extend to Sipcam Agro USA, Inc. SIC PAM AGRO USA, INC. DISCLAIMS ALL OTHER WARRANTIES, EXPRESS OR IMPLIED. TO THE EXTENT CONSISTENT WITH APPLICABLE LAW SIC PAM AGRO USA, INC. SHALL NOT BE LIABLE FOR CONSEQUENTIAL, SPECIAL, OR INDIRECT DAMAGES RESULTING FROM THE USE OR HANDLING OF THIS PRODUCT, AND SIC PAM AGRO USA, INC. SOLE LIABILITY AND BUYER’S AND USER’S EXCLUSIVE REMEDY SHALL BE LIMITED TO THE REFUND OF THE PURCHASE PRICE. BUYER AND USER ACKNOWLEDGE AND ASSUME ALL RISKS AND LIABILITY RESULTING FROM HANDLING, STORAGE AND USE OF THIS PRODUCT. SIC PAM AGRO USA, INC. DOES NOT AUTHORIZE ANY AGENT OR REPRESENTATIVE TO MAKE ANY OTHER WARRANTY, GUARANTEE OR REPRESENTATION CONCERNING THIS PRODUCT.

Container Disposal: Refillable container. Refill this container with pesticide only. Do not reuse this container for any other purpose. Cleaning before refilling is the responsibility of the refiller. To clean the container before final disposal, empty the remaining contents from this container into application equipment or a mix tank, refill the container about 10 percent full with water, agitate vigorously or agitate water with the pump and equipment and allow to stand for 2 minutes. Repeat this procedure two more times. When the container is empty, replace the cap and seal all openings that have been opened during use; and return to the point of purchase, or to a designated location named at the time of purchase of this product. Prior to refilling, inspect carefully for damage such as cracks, punctures, abrasions, worn-out threads and closure devices. Check for leaks after refilling and before transporting. Do not transport if this container is damaged or leaking. If the container is damaged or leaking, call Chem-Tec. If the container is damaged and leaking or material has been spilled, follow these procedures:

- Cover spill with absorbent material.
- Sweep into disposal container.
- Wash area with detergent and water and follow with clean water rinse.
- Do not allow to contaminate water supplies.
- Dispose of according to instructions.

If not returned to the point of purchase or to a designated location, clean empty container as instructed above and offer for recycling. Disposal of this container must be in compliance with state and local regulations.

This CONTAINER is NOT SAFE FOR FOOD, FEED OR DRINKING WATER.

EMINENT® 125SL
FUNGICIDE

ACTIVE INGREDIENT:
Tetraconazole {1-{2-(2,4-dichlorophenyl)-3-(1,1,2,2-tetrafluoroethoxy) propyl}-1H-1,2,4-triazole}.........................11.6%
OTHER INGREDIENTS:..........................................................88.4%
TOTAL......................................................................................100.0%

Contains 1 lb. active ingredient (tetraconazole) per gallon.

KEEP OUT OF REACH OF CHILDREN

CAUTION

FIRST AID

IF SWALLOWED
• Call a poison control center or doctor immediately for treatment advice.
• Have affected person sip a glass of water if able to swallow.
• Do not induce vomiting unless told by a poison control center or doctor.
• Do not give anything by mouth to an unconscious person.

IF ON SKIN OR CLOTHING
• Take off contaminated clothing.
• Rinse skin immediately with plenty of water for 15-20 minutes.
• Call a poison control center or doctor for treatment advice.

IF IN EYES
• Hold eye open and rinse slowly and gently with water for 15-20 minutes.
• Remove contact lenses, if present, after the first 5 minutes, then continue rinsing eye.
• Call a poison control center or doctor for treatment advice.

Have the product container or label with you when calling a poison control center or doctor, or going for treatment.
