

PRODUCT INFORMATION BULLETIN

FIFRA Section 2(ee) Recommendation

Expiration Date: December 31, 2016

For distribution and use in New Jersey and Massachusetts only.

EPA REG. No. 42519-22-5905

A systemic biofungicide for control of Phytophthora root rot (Phytophthora spp.) of cranberries at a lower aerial spray rate.

DIRECTIONS FOR USE

It is a violation of Federal Law to use this product in a manner inconsistent with its labeling.

The labeling must be in the possession of the user at the time of application. Follow all applicable directions, Worker Protection Standard requirements and precautions on the EPA registered label.

This "Helena ProPhyt" Bulletin is valid until December 31, 2016 or until otherwise amended, withdrawn, cancelled or suspended.

Mixing and Application Instructions for Cranberries:

Aerial applications may be made with 4 pints of Helena ProPhyt per acre in a volume of 10 gallons of water per acre. To avoid potential phytotoxicity effects, the pH of the spray solution should be above 5.5, or run irrigation for a minimum of 30 minutes to fully wet the foliage before application or utilize a spray volume of 20 gpa.

Check equipment calibration frequently. Complete coverage and uniform application are essential for the most effective results, especially when lower spray volumes are applied. If necessary increase the spray volume per acre for complete coverage.

Fill the spray tank with clean water. Add the required amount of **Helena ProPhyt** to the tank as indicated in the Application Instructions. While agitating, add the remaining amount of water. Apply the solution directly to the foliage.

This recommendation is made as permitted under FIFRA Section 2(ee) and has not been submitted to or approved by the EPA. The 2(ee) Bulletin must be in the possession of the user at the time of pesticide application.

Follow all applicable directions, restrictions and precautions on the EPA registered label.

For First Aid and other Precautionary Statements, see label attached to the container.
