Boron
Amino Acid Complex Liquid Foliar

Net Weight: 10.3 lbs./4.6 kg (1 Gallon)

Lot #: 11000000

v09/2011
MATALOSATE® BORON

GUARANTEED ANALYSIS (w/w):
Boron (B) ................................................................... 5.0%
5.0% Complexed Boron

Derived from Sodium Tetraborate Amino Acid Complex.

GENERAL INFORMATION:
Metalosate® Boron is designed for foliar application on plants to prevent or correct nutrient deficiencies that may limit crop growth and yields. It is water soluble and nontoxic to plants when applied as directed. For best results, apply Metalosate® Boron according to recommendations based on plant tissue or soil analysis.

DIRECTIONS:
Shake well before use. Keep from freezing.

Dilute one part Metalosate® Boron with 20 or more parts water. Apply by a spray method and in an adequate amount of water that will provide complete coverage of the plants. Use of a non-ionic wetting agent may improve spray coverage of certain hard to wet plants. Do not apply undiluted.

Metalosate® Boron can be included in a regular spray program on crops. Consult with an Albion® representative on compatibility with other spray materials.

The rate of application will depend on the crop, stage of growth, and severity of deficiency. The maximum recommended rates are for mature, full-sized plants. Reduce the rates proportionately when spraying smaller plants.

Metalosate® Boron may be used on legumes, grain crops, root crops, cucurbits, cole crops, leafy vegetables, woody and herbaceous ornamentals, deciduous fruits, vine crops, tropical and subtropical fruits, and many other crops.

RECOMMENDATIONS:
Field Crops and Vegetables: Apply 8 to 16 fluid ounces per acre (0.5 to 1.0 liter per hectare) during periods of rapid growth or nutritional stress. The application may be repeated 2 or more times through the growing season.

Tree Crops: Make an application of 12 to 24 fluid ounces per acre (0.75 to 1.5 liter per hectare) after the beginning of active growth. The application may be repeated at 2 to 4 week intervals through the growing season.

Grapes and Berries: Make an application of 8 to 16 fluid ounces per acre (0.5 to 1.0 liter per hectare) after active growth begins. The application may be repeated at intervals of one week or more through the vegetative-growth period.

LIMITED WARRANTY:
Seller’s and Manufacturer’s obligation is limited to replacement of defective product. NEITHER SELLER NOR MANUFACTURER SHALL BE LIABLE FOR ANY INJURY, LOSS, OR DAMAGE DIRECTLY OR CONSEQUENTLY ARISING OUT OF THE MISUSE OR INABILITY TO USE THE PRODUCT. ALL OTHER WARRANTIES EXCEPT IN WRITING FROM THE MANUFACTURER, WHETHER EXPRESSED OR IMPLIED ARE HEREBY DISCLAIMED.

General information regarding the contents and levels of metals in this product is available by calling 1 866 CHELATE (1 866 243 5283).

CAUTION: This material contains boron. Its misuse may cause serious injury to the crops. It should be used only under the direction of fertilizer consultants.
