Staunch should be sprayed uniformly onto the fertilizer using a fine spray pattern. Tank mix components may be applied as separate ingredients with powders and dry flowables added first or they may be mixed in a slurry in the proper ratio and added jointly. Staunch may also be impregnated on dry bulk fertilizer in the field while the fertilizer is being spread using a pneumatic applicator equipped to impregnate herbicides.

The following table provides a reference to determine the amount of Staunch to be mixed per ton of dry bulk fertilizer for a range of herbicide rates.

Fertilizer Rate	Acres Covered	Staunch (pints/acre)		
		1.5 pt/acre	1.75 pt/acre	2 pt/acre
(lb/acre)	(per ton)	Pints Herbicide/Ton Fertilizer		
200	10	15	17.5	20
300	6.7	10	11.7	13.4
400	5	7.5	8.8	10
500	4	6	7	8
600	3.3	5	5.8	6.6
700	2.9	4.4	5.1	5.8

To determine the amount of Staunch needed for other rates of fertilizer, use this formula:

$$\frac{\text{Staunch (pints/acre)}}{\text{Pounds of fertilizer/acre}} \times 2000 = \text{Pints of Staunch per ton of fertilizer}$$

If the herbicide/fertilizer mixture is too wet, use of a drying agent is required to provide a dry, free-flowing mixture. For mixtures to be used in spinning-disc applicators, Micro-Cel E calcium silicate powder (Manville, Filtration & Minerals) is recommended for use as a drying agent. Mixtures to be used in pneumatic applicators should use Micro-Cel E or Agsorb 16/30 RVM-MS granular clay (Oil-Dri Corporation). The drying agent should be added separately and uniformly to the prepared pesticide/fertilizer mixture, in a quantity that is sufficient to provide a suitable free-flowing mixture. Generally, less than 2% Micro-Cel E or 5% Agsorb 16/30 R VM-MS by weight is required.

Precaution: To avoid potential for explosion, do not impregnate Staunch on ammonium sorbate nitrate, potassium nitrate, or sodium nitrate fertilizer or fertilizer blends. Do not impregnate on a single (0-20-0) or triple (0-46-0) super phosphate. Do not attempt to impregnate Staunch on agricultural limestone as the herbicide will not be adequately absorbed.
