### **Use Information**

---

#### **End of Season Crop Termination with Drip (Trickle) Chemigation of Beds with Existing Tarp/Plastic Mulch**

Follow the instructions listed in the Vapam<sup>®</sup> HL Section 3 label for preparation and application conditions for pre-plant drip chemigation, with the exception of those instructions for soil preparation which are not applicable for this treatment. Use the following additional steps:

- Use existing drip or trickle tape in the bed.
- Ensure that all drip (trickle) tape is functional with all major leaks repaired.
- Apply Vapam<sup>®</sup>HL in beds that are already covered with plastic (with or without plant holes) and

have a drip tape buried at a depth of >1 inch.

- Apply Vapam®HL soon after the last harvest when the plants are still actively growing.
- Apply Vapam®HL at 43-56 gallons/acre at a flow rate that allows good lateral movement of water in the bed.
- Contact the local extension specialist or visit <http://ipm.ucanr.edu/PMG/r734900211.html> for more information about flow rates that provide good fumigant distribution in soil on strawberries.
- Use the maximum application rate for fields with hard-to-control weeds and pathogens such as nutsedge (*Cyperus* sp), Fusarium wilt (*Fusarium oxysporum* f. sp. *fragariae*) and Charcoal rot (*Macrophomina phaseolina*)
- Vapam®HL application rate per treated acre is not to exceed 75 gallons which corresponds to a broadcast equivalent rate of 56 gal/acre.
- Dispose of all crop and/or plant residues following treatment by removal, tillage or other appropriate means.

---

### Restrictions

---

The terminated crop must not be used for any food or feed purposes after the product has been applied.
