

Charging At Home	<input checked="" type="checkbox"/>	Notes
Make sure you have a place to charge your EV that is convenient. This could be in a garage, a driveway or at your work.		
Contact a qualified electrician to have your home's power supply evaluated.		
You can plug the included charging cable into a standard 3-prong household outlet or shop options for faster charging.		
Some utilities offer incentives and rate discounts for EV drivers and plans that let you use more renewable energy. Check with your local utility and see which rate plan and programs are best for you.		
A home solar system makes a great companion with an EV. Find out if switching to solar offsets the cost of your monthly utility bill.		
Support/Tools		
Email support@pluginamerica.org or call 1 (877) EV-Help-1 for a free consultation. You can also enroll in Plug In America's EV Support Program for more answers and ongoing support.		
Download 3rd-party smartphone apps like Chargeway, PlugShare and ChargeHub so you know where to find charging stations and how much it costs to charge when on the go.		
Insurance		
Get a quote from your auto insurance company or shop around for quotes. Many insurers offer special discounts for EV buyers.
